key to the Amiga's future.**

Breathless!

The mightiest Amiga game this decade

Future
PUBLISHING
Your guarantee of value

FALCON

Superior performance. Full on speed. Yours when you add the new Falcon 68040/060 accelerator to your Amiga 1200. It's like never hitting the brakes. State-of-the-art-technology for the ultimate rush. Seriously faster than a 4000/040 at a fraction of the cost. Fit the Falcon, feel the speed. If you dare.

SPECIFICATIONS

1.5 Times more powerful than the Amiga 4000/040*

RAM Access 3.5 times quicker than the Amiga 4000/040*

Easily upgradable to the 68060 Processor**

68060 Processor socket built-in

Can host up to 128MB of Local Burst RAM

Fast SCSI-II/III SMA Hard Disk Controller (10MB/Sec)

PCMCIA Compatible and fully auto-configuring

*Speed based on the 68040 25MHz CPU

** Upgrade 68060 price programme available soon
Amiga case needs to be opened and trapdoor modified

Future Vision

AF SERIOUS

81 Introduction

83 ASIM CDFS 3

ASIM CDFS (Compact Disc File System) has been around for some time and this latest version could make all the difference in bringing your Amiga and CD-ROM into harmony.

84 IMPACT!

With the addition of inverse kinematics in LightWave 4.0, this popular 3D animation system will have only one weak spot – collision detection. *IMPACT!* adds this and real-world physics to make creating animations easier and more realistic.

86 XiPaint

A 24-bit true-colour paint package with layers on CD and at a reasonable price. We load up *XiPaint* and go in search of inspiration for a pixel-constructed masterpiece.

91 Amiga M1438S

The first official new product since the demise of Commodore is a monitor – but is it any good?

93 Link-It!

If you have a two-computer setup, you need a networking solution to get the maximum benefit from it. There is certainly no shortage of networking options to choose from, but do you know what to look for? *Link-It!* could be a simple and flexible solution.

96 MainActor Broadcast

This is a program that should be of interest to users interested in graphics and animation. *MainActor Broadcast* can load and save animations and images in many different formats.

101 CD-ROMs

Aminet Set 2 follows on logically from Set 1 and is jam-packed with useful utilities, programs, pictures, demos and music. *C=64 Sensations* is a nostalgic CD of a bygone era and *Gamers Delight II* should appeal to all you game lovers out there.

1995 REVIEW

Join us for a stroll through one of the most eventful years in the Amiga's history, as seen through the eyes of Amiga Format.

page 25

A pleasant surprise

David Pleasance is back in the form of Tangent Music Design – a partnership intent on demonstrating the fact that the Amiga can produce results just as good as any other music computer.

YOUR GUARANTEE OF VALUE

This magazine comes from Future Publishing, a company founded just ten years ago but now selling more computer magazines than any other in Britain. We offer:

BETTER ADVICE. Our titles are packed with tips, suggestions and explanatory features, written by the very best in the business.

STRONGER REVIEWS. We have a cast-iron policy of editorial independence and our reviews give clear buying recommendations.

CLEARER DESIGN. You need solid information fast. So our designers highlight key elements by using charts, diagrams, summary boxes, and so on...

GREATER RELEVANCE. At Future, Editors operate under two golden rules:
● Understand your readers' needs.
● Then satisfy them.

MORE READER INTERACTION. We draw on readers' contributions, resulting in the liveliest letters pages and the best reader tips. Buying one of our magazines is like joining a nationwide user group.

BETTER VALUE FOR MONEY. More pages, better quality - magazines you can trust.

1996
In View

Nick Veitch boldly surges forward into a new year for the Amiga, one full of hope, optimism and happiness for us all - apart from the monsters in *Breathless*...

Surprisingly, it isn't very often I get really excited by a new game, but over the last few months we have seen some tremendous releases. There was *Alien Breed 3D*, *Worms* and now, *Breathless*.

I was intrigued when I learnt that Power Computing were going to be publishing a game. Well known as they are for hardware and serious software, entering the entertainment market is a big step. But I'm sure it was a step that was very easy for them to take after seeing *Breathless* - just as easy as it was for us to say: "We'd like that on our Coverdisk please".

If you haven't already played with the Coverdisk demo (how could you resist?), then go and do so right now. Then you can read the exclusive review on page 47. And then you can rush out and buy it.

And it's by no means the only great game we have for you this month.

After what seems to have been a very long and disturbing quiet period, Binary Asylum have just released the sequel to their acclaimed *Zeewolf* helicopter-gunship-races-around-polygon-landscape-and-blows-up-things game. Cunningly named *Zeewolf 2*, it is a reworking of the original with more things to blow up and more vehicles to do it with. Don't listen

to me, though, since our own Mr McGill has spent what seems like the whole month playing this game, if not the full 24 hours a day, then at least a good 20. In fact, he knows it so well that he terrified Binary Asylum with frequent, probing phone calls.

On the productivity side, that lucky Mr Sandiford went to the recent show in Cologne, where he obviously had a good time, because he came back with loads of review samples of great new products, which he wouldn't let me see in case I took them away from him.

The most interesting of these (for me anyway) was Anti-Gravity's *IMPACT!* kinematics system for *LightWave*. This tremendous system allows you to apply real-world forces, such as gravity, to selected objects within a scene, and will work out resultant forces and collisions.

The most interesting thing according to everyone else is *MainActor Broadcast*, the latest in a line of animation processing software, which goes far beyond what you could do with old *AdPro* and *FRED*.

Well, there isn't time to mention the new Amiga monitor, our feature on David Pleasance, the *Link It!* system, or even *Pinball Prelude*, because I think there's just enough time for me to thrash Steve McGill at *SWOS 95/96* one more time before the night watchman throws us out of the building...

Get yourself connected!

In the first of a new series on how to use the Internet, Darren Irvine picks out the best email systems

The Amiga is an ideal Internet solution, and Amiga Tech.'s new bundle will be emphasising this.

AMIGA FORMAT news

Surf's up for A1200 - new bundle promised

Amiga Technologies have revealed to us that there will be an Internet-specific bundle of the A1200 on sale early next year. Although no specifics were given, we understand that the pack will contain a modem, an A1200 with hard drive and the relevant TCP and netbrowsing software.

Having campaigned for such a venture (see AF78 amongst others), we obviously think that this is great news. The basic Amiga setup is an ideal, low-cost solution for families or organisations who want Internet terminals. The Amiga, as a multimedia platform, is obviously ideally suited to this task, with its integrated sound and graphics capabilities.

The only drawback so far is that there has been no concerted commercial effort to bring together the network software (TCP) and the

Jonathan Anderson

The Amiga Magic Pack (below) will soon be joined by a pack aimed at Net surfers.

browsing software (AMosaic etc.) into an easy-to-use package, suitable for novices.

However, as Jonathan Anderson told *Amiga Format* in October: "Our intention is to include support for the Internet next year. This will be

included in Workbench". We understand that Amiga Technologies had been talking to developers about this project even before the relaunch of the A1200, so the resulting bundle may not only include the relevant hardware, but also proper TCP support through Workbench.

A4000s ARRIVE, NEW MODELS ON THE WAY

The new A4000s are now officially in stock, only slightly later than they were promised. The initial batch of machines are '040 only, the more powerful '060 versions will follow in January.

Although the A4000 doesn't seem to be priced very competitively, the common consensus is that the initial run will be snatched up at any price by people who have been starved of powerful Amigas for too long. These people mainly include corporate clients who use the Amiga as the centre of a multimedia, rendering, or desktop video solution.

A4000s won't be produced in large numbers initially, but hopefully there will be enough for those whose business depends on them.

More new machines seem to be on the way. Petro Tsyhtchenko, MD of Amiga Technologies, made an official announcement at the Computer Arena conference in Rome that an A1200+ machine was on the way for early '96.

Although he did not reveal any specifics, *Amiga Format* believes that the new A1200 will feature a 68030 processor, and include a SIMM socket on the motherboard to facilitate RAM upgrades.

It is unclear whether this machine will be sold as a stand-alone unit, or only as part of a bundle.

"It was about a year ago that we thought of the idea. Another company had always, in our opinion, wrongly claimed to be the de facto for music computers. We decided that we would set out to prove that we can produce world-class quality music using the Amiga and give the five and a half million Amiga owners worldwide something to be proud of."

DAVID PLEASANCE PAGE 30

Trouble in store

High profile Escom stores could do a lot for the Amiga, but do their staff have a hidden agenda?

Although ESCOM stores are now stocking the Amiga, it seems that some sales staff are not necessarily giving out the best advice. Amongst the complaints, one outraged Amiga fan told us that a store assistant had told him, "the Amiga is only around for Christmas, then it will go out of

production. If you want a machine with a future, you are better off with an Escom PC."

Amiga Technologies are very concerned about this situation and have made the following suggestions if you find yourself in a similar situation:

- Ask to speak to the Store Manager.
- If he or she is unhelpful, take the names of the people involved and make a note of the location of the store.
- Forward these details, with a covering letter explaining the circumstances to Amiga Technologies at: 1st Floor, 6 Bridge Avenue, Maidenhead, Berks SL6 1RR.

The show must go on

The *World Of Amiga* show will take place early in 1996. There has been a certain amount of confusion because the show organisers were sadly let down over a venue for the original date. The event has been rescheduled to the 12-13th April and will now be taking place in the familiar venue of the Hammersmith Novotel.

The show is an important statement of faith in the machine by its new owners and, judging by the reaction to the recent show in Cologne, it doesn't seem as if they will be disappointed. Obviously, an exhibitor list is far from complete at the moment, but we would expect to see some representation from overseas developers, such as Phase 5, MacroSystems and Villagetronic.

For more details of the show as we get them, you can visit the AF homepage at: www.futurenet.co.uk/computing/amigaformat.html Or try ringing the organiser on 01369 706346.

Disk drive bother

After some extensive research, the incompatibility problem which prevents some games software working properly on the new A1200s has been tracked down to the floppy drive itself.

One of the hardware features, the DSKRDY line, which was present on all previous drives used in the A1200, is not supported by the mechanism used in new machines.

Normally, software applications would check to see if the drive was on and spinning at the correct speed by either waiting for half a second, or by checking the DSKRDY line. AmigaDOS, and therefore everything that works through Workbench, just wait for a bit and so they work fine.

Only games which work on very low-level disk access will be affected, but, unfortunately, it doesn't seem like there is any way around the problem short of remastering the disk, which many software houses may not be in a position to do.

Amiga Technologies have admitted that the

official hardware reference manual is "ambiguous" in parts and advise developers: "When doing such low-level operations, it is always a good idea to look and see what the OS is doing". Programmers take note: do not try to make use of calls to DSKRDY anymore.

Fortunately, *Amiga Format* was able to prevent at least one near-disaster, by supplying the information in time for Binary Asylum to remaster their latest release, *Zeewolf 2* (reviewed on page 57), to work on the new machines.

All developers should now be aware of the difficulties with new drives and be able to adjust their software accordingly.

Citadel (above) and *Zeewolf 2* (left) were both saved from incompatibility by the quick reactions of AF and their respective developers. Older games like *Aladdin* (below) will sadly probably never work.

The Smith Column

So the World of Amiga Show went ahead in Toronto from 8th December '95, which is good news for all of us. As I understand it, because I couldn't get there, the seminar line-up was as follows:

Amiga on the Internet Fri. 5:00pm - 5:40pm; Scala Multimedia

Production Fri. 7:00pm to 7:40pm; Amiga-PC Connectivity with Linkit Fri. 8:00pm to 8:40pm; CD-ROMs and your Amiga Sat. 11:00am to 11:40am; Practical Modeling in LightWave 3D Sat. 12:00pm to 12:40pm; PC and Macintosh Emulation Sat. 1:00pm to 1:40pm; Professional 3D Graphics with Cinema 4D Sat. 2:00pm to 2:40pm; Structured Drawing with DesignWorks v2. Sat. 3:00pm to 3:40pm; Non Linear Video Editin Sat. 4:00pm to 4:40pm; Creating CD-ROMs on the Amiga Sun. 11:00am to 11:40am; 3D Digitizing with Vertisketc Sun. 12:00pm to 12:40pm; How to make Money with Multimedia Applications Sun. 1:00pm to 2:40pm (thanks to comp.sys.amiga.advocacy for the list).

Which seems to show just a teensy-weensy bias towards the graphics end of the market it must be said. This aside, the notion that the Amiga is once again attracting show goers and show organisers must be a good thing all around. Now we need AT and Escom to start ramping up that advertising for the Amiga because following the

The Amiga is still the most versatile home computer around. Welcome to the real world...

Christmas rush for new PCs and Macs, people are going to be sitting in front of boxes all over the world saying: "Waddya mean I need another 8Mb of RAM before the system will boot? Eh? Parity or no-parity? Do what? I just wanna play Worms is all. And waddya mean I can't load all of the system software because I need another hard disk? Come off it bud!". If only they'd known.

Just think if you'd been given an Amiga for your first computer at Christmas... and if you have, then welcome. Multitasking, plug it into the telly, loads of Shareware, loads of games, loads of cost-effective (cheap) software floating around the place. Built-in sound, an OS that doesn't increase your system overheads. If you've got any sense at all, you are going to be one happy bunny.

"But I can't play Command And Conquer! Bwhahahhah" Oh please, you can't play Sonic the flaming Hedepig or Super Plumber Boys either can you? So what? You won't have to fork out god knows how many hundreds of pounds to make your computer do what you want it to do either. This is real plug and play bud. This is real computing with a human touch. No one needed to buy a Rolling Stones song or get Oliver Stone to witter on about power to convince people that the Amiga could do what you wanted it to do, when you want it to do it from a base unit. So get into it. The Amiga is still the most versatile home computer around. So Happy New Year and welcome to the real world.

The opinions expressed here are not always those of Amiga Format.

Phenomenal

An unprecedented and overwhelming response to the Coala competition set by *Amiga Format* in issue 78 left staff agog at the flood of entries pouring into the office every day since that issue hit the newstands.

In all, over 2,000 entries were received. The competition, held in conjunction with Siren and Empire Interactive, put 10 Apollo accelerator cards up for grabs. The winners will be drawn and notified shortly after this issue goes to press.

Rachel Hutton of Empire Interactive said, "gush gush gush gush"

Amiga Format would like to thank all the entrants who took part. The response was a boost for morale as well as an eye opener to the demand for accelerators out there.

Coala - one of the more innovative Amiga games of recent times, and certainly one of the most popular competitions.

TIME TO GET STARTED

A new multimedia language called *Advanced AmigaGuide* will be showcased in a CD-ROM package called *Get Started*.

Developed by Active Software, the CD is targeted at Amiga beginners and intermediate users with the aim of helping them advance in the numerous fields of Amiga productivity.

Amiga Technologies have shown interest in *Advanced Amiga Guide*. Chris Wiles, Managing Director of Active, wrote the following down on a piece of paper, "I don't think anything like this has been done before. It really does prove that with skillful AGA programming the Amiga is capable of PC-style multimedia interfaces."

Get Started should be available for neophytes in late January.

PROPOSED ANIMATION MODES

At present the Amiga does not have the ideal processing power to process MPEG1 streams at full frame rate (ie 25 FPS).

Therefore, Active Software have developed an animation format which takes advantage of Amiga architecture by storing animation frames in Planar format as opposed to Chunky pixel format which is used in MPEG streams.

This format will play at 25 FPS with upto 256 colours, the trade-off is that all animations will have to be LONG word aligned on screen for highest possible frame transfer rate. This allows FMV to work on 68020.

These pictures illustrate some of the noteworthy features of the *Advanced Amiga Guide* software.

Amiga - the future of television

If ever there was a moment for the combined weight of Amiga hardware manufacturers to showcase the potential and practicality of Amiga-based technology as the outstanding platform for a cable-television network, it is now.

The announcement by Tony Blair in October 1995 that, if elected, he will allow British Telecom to compete directly with private cable-TV companies wiped £1 billion off of the share value of said companies.

In combination with the new scheme introduced by the Department of Trade and Industry to allow on-line services to be sent into consumer's homes by radio, cable-TV's chances of ever taking off are in danger of being completely crushed.

To combat the threat, the Cable Communications Association have spent £200,000 at the Telecom Manager's Association Show held in Brighton last month (November '95). The money was spent on the presentation of future multimedia services including:

- Wideband Internet Access - A full 8MHz cable channel feed with access to the World Wide Web at claimed speeds that are 100 times faster than traditional methods.
- The linking of computer networks and telecoms to allow businesses access to locally-priced calls between offices.

Most important to the Amiga market, was the trial of television transmitted across a PC network. As the Cleveland

It looks good, it plays well, it's Scottie's favourite - it must be *Breathless*.

HiSoft's Squirrel opened new doors for the Amiga - now their MPEG unit could repeat the success.

Amiga controlled MPEG television. An opportunity for cable companies to pre-empt BT.

Constabulary Information Network has so brilliantly and practically illustrated, the Amiga is best suited to, and most cost effective when working within this type of cable application.

Wideband access would mean that owners of Amiga technology-based set top boxes could enjoy video on demand, communicate with each other within their franchise area for free, and play network games such as *Super Skidmarks* and *Gloom*.

General Cable, the only cable company still trading in shares above their launch price believe that cable must demonstrate its unique capabilities to restore investor confidence, "a couple of years down the line most networks will be pretty well complete and investors will start to see some profits."

With the advent of Hi-Soft's MPEG decoder and Amiga Technologies' pledge to licence their technology to third parties, the Amiga's future could truly be the future of television.

The Bradford Column

It is a curious paradox that the Amiga's saviour is a company which, with their 'pioneering' strategy of selling high quantities of PCs at very low prices, is doing the most to undermine the Amiga's success, by making its price look disproportionately large.

After all, when a (highly desirable, if not essential) monitor is added to an Amiga Magic pack, it comes in at a few quid more than a 'base' PC system. Surely it is not beyond Amiga Technologies' technical capabilities to get the Amiga to interface with those same monitors which grace the average PC? That, at least, would be one positive benefit of being owned by one of Europe's largest PC manufacturers.

The Amiga's biggest selling point, over the years, has been the fact that it is a 'real' computer but at a much lower price than those lumbering dinosaurs used in offices. Now those dinosaurs have evolved to become quite nimble little things themselves, and anything which will help to regain the Amiga's price advantage should surely be looked into, shouldn't it?

It is something of a mixed blessing that Escom have now decided to stock Amiga in their stores. Yes, it's good that they - at least - will be advertising it, and it will have a greater High Street presence, but it's not going down too well with a lot of the independent retailers who have always been the backbone of the Amiga's success.

Anything which will help to regain the Amiga's price advantage should surely be looked into, shouldn't it?

Some of them are afraid that, should the machine not perform to Escom's expectations, they will slash the price in an effort to sell it through. Good news, you think? No. The independents will then be left with stock which they will probably have to lose money on to sell. Which hardly helps to build long-term trading relationships.

Many independents are already selling Amigas with a considerable amount of forbearance, knowing that profits made by Amiga Technologies will, eventually, filter back through to the parent company who are their main competition on the High Street.

So if Escom retail do unilaterally reduce the price of the Amiga, many of those independents will just wash their hands of the machine altogether. Never to touch it again. For the Amiga's long-term future, I hope AT are keeping a close eye on their parent's activities.

Contact Dale Bradford by fax on 01633 896087.

The opinions expressed in this column are those of a fine, upstanding man - but not necessarily those of Amiga Format.

To find out more about the potential of MPEG, cable television, and the Cleveland Constabulary Information Network, turn to our feature on page 33.

MPEG PAGE 33

FANTASTIC FOUR SAVE SILICA

Following the application for an Administration Order by SDL (13th October 1995), a group calling themselves Anglo Corporation PLC have stepped in and bailed the stricken retailer out in a deal involving an undisclosed sum.

The buyout vindicates SDL's management strategy of applying for the much maligned Administration Order to protect themselves from debtors - debts of just under £8 million had accumulated over a period of 18 months, due no doubt, at least in part, to the limbo-like state of the Amiga during that period.

The re-emergence of the Amiga, SDL's most successful product line, combined with the various announcements by Amiga Technologies of new Amiga lines and support equipment such as CD-ROM, should secure the future of the company.

When commenting on the buyout, Stuart Tidy, joint Chairman of Anglo Corp said, "Our immediate focus will be to concentrate on taking full advantage of the busy Christmas season."

More plans will be unveiled next year. For now though, the future distribution lines of the Amiga are assured. Hurrah!

From left to right, Mike West, Stuart Tidy, David Gosling, Tony Deane.

Amiga Format's top 10 reasons to buy... an accelerator card.

Breathless in action. The best Amiga game this decade, according to Steve McGill.

There are many accelerators on the market at the moment. Look out for a round-up in March.

Most graphics programs, and especially rendering software, will also be enhanced.

1 You can play *Breathless* (see page 47) at the highest screen resolution and a faster running speed.

2 3D games in general run faster (including *F1GP*).

3 Windows in Workbench are optimised.

4 Most come with memory expansions on board.

5 Rendering times in 3D packages are vastly reduced.

6 More powerful Amigas are more attractive to developers.

7 Multi-tasking is easier to achieve and more efficient.

8 JPEG images compress and decompress quicker.

9 David Taylor of sister mag *Amiga Shopper* reckons they are the biz.

10 You'll be doing yourself a favour and making life easier in general.

A sample of the output delivered by the Endicor, and not a cheap excuse to print a picture of a topical celebrity.

Drive your way to sharper pictures

A new Amiga printer driver written specifically to optimise the already impressive output of the Epson Colour Stylus Printer is now available from Eyetech Group LTD for the princely sum of £34.95.

Users of the driver can expect pin sharp results from resolutions as high as 700x500 pixels. The driver is known as the Endicor driver and is available direct from Eyetech. Contact number is 01642 713 185.

"Imagine you were trapped in a box canyon surrounded by hostile Indians. You've just fired the last bullet and the Indians are coming to get you" - Steve McGill draws some strange analogies in his *Breathless* review

HOW TO ORDER

When ordering, please don't forget to include the carriage charges! Charges within the UK are £3.50 for first class post (which usually arrives the next day). Orders over £100 are sent by registered post at a cost of £4.50. Next-day courier service, within the UK mainland and subject to availability, is £6.00. All hardware is sent by Next Day Courier. Please ask for overseas pricing, and pricing for islands & Scottish Highlands. You can pay by:

Credit Card : Visa, Mastercard, Access, Delta, Switch and American Express. We only bill your card

when we despatch the order, not before.

Cheque : Please make cheques payable to Emerald Creative Technology Ltd.

All pricing includes VAT but not carriage. We reserve the right to change prices - you will be informed of any change when you order. Faulty goods will be replaced or repaired if returned within 30 days of purchase. We will refund if we can't repair the goods. It is the responsibility of the customer to check for compatibility of a particular product with existing equipment before buying E&OE.

Now open Saturday 10am to 4pm

Music Beginners Pack Special Offer!
Music X v2 and Pro Midi interface

together for just £64.95!

The Cologne show, this year called Computer '95, has always been a big event for Amiga fans and this year was no exception.

There was great excitement around the Amiga stand, after the announcement that the Amiga would be adopting the PowerPC processor in the future.

The Power Amiga

As we informed last issue, in our exclusive news report, great things are afoot in the Amiga world. In a shock announcement Amiga Technologies have made known their intentions for the future of the Amiga – the PowerPC chip.

As we were able to find out more about the project from a press conference during the Computer '95 show in Cologne, during November, we thought it only fair to update you on the current situation and explain the possible ramifications, along with a report from this most prestigious of European Amiga shows.

The conference was an event in itself and was something to behold. It was surprising just how many computer journo types were in attendance, between 60 and 100 people, so many it was hard to imagine they were all from Amiga titles – not to mention TV cameras. However, bearing in mind the gravity of the announcement made, it was quite understandable.

The highlight of the conference, however, was Petro Tyschtschenko's, President of Amiga Tech., keynote address

The press conference at the Computer '95, chaired by Horst Brandle (second from left) of Amiga Plus magazine, was the setting for a dramatic announcement by Petro Tyschtschenko (far right).

where he made known the company's plans for the Amiga.

Mr Tyschtschenko pulled no punches with his explanation of why they had kept quiet about their plans: "We have a clear business plan; we do things consequently, step-by-step.

First we ramped up the production and set up an organisation to handle the Amiga market and satisfy the demand. Now that we have achieved this successfully, we will focus on research and development to bring new and

better products on to the market. One of the mistakes the former Commodore made, was to do too many things at a time, too many promises and so losing focus on important aspects of its business.

We have learned from these mistakes and won't repeat them. Commitments and promises are nice, but facts are better."

Strong words, but what does this mean to Amiga users? "Our pre-emptive multitasking Operating System Amiga OS will be ported to the Power PC

platform first. Our goal is to make our OS hardware independent to allow further ports on other platforms."

So what's so special about the PowerPC chip? Well, for starters, it uses a RISC (Reduced Instruction Set Computer) processor which runs extremely fast for a surprisingly low cost. The first models are planned to use the MPC604 chip from Motorola which can run at speeds in excess of 150MHz and should be available by the first quarter of 1997.

However, not only do the PowerPC chips run very quickly, they can also emulate other processors very well. This means that making the Amigas backward compatible is fairly easy and could also mean that the Power Amigas will be able to run PC software as well.

While 1997 seem a long way away Amiga Tech have been working with German peripheral manufacturer Phase on a new range of PowerPC accelerators. The boards will boost the performance of the A1200, A4000 and A3000 to speeds in excess of 100MHz and will be available some time in the first half of 1996.

Continued overleaf ➔

Computer '95 show Report

Aside from the announcement from Amiga Technologies, the Computer '95 show in Cologne on 10-12 November, was also the venue for the unveiling of many new products. It was attended by over 50,000 eager and cash-laden Amigans just itching to get their hands on the latest wares.

There was an astounding number of new products at the show, both software and hardware, and the stands filled two whole halls of the massive exhibition complex.

Although nominally an all-format show, approximately 90 percent of the stands were dedicated to the Amiga. Despite their abundance of new products two of the biggest sellers were the Amiga Magic bundles and the new 1438 monitors.

Lots on offer

The Maxon stand was the busiest software-only stand who had several exciting programs on display, as well as German 3D guru Tobias Richter who was showing his 1995 showreel. *Cinema 4D version 3 Pro* was being shown on the

Amiga as well as beta version 4 on the PC and Mac.

Version 3 has several enhancements, including lens flares, inverse kinematics with limited movement and an incredible speed increase of between 2 and 10 times faster depending on the scene complexity.

There are also three new expansion modules: *CinemaWorld* - for creating landscapes; *CinemaFont* - for converting Type 1 fonts to smooth 3D objects; and *CinemaTree* - as the name suggests, a fractal tree generator.

Aside from *Cinema 4D*, there were plenty of other interesting products that were on show on this stand, including *DiskMAGIC*, *MaxonMAGIC 3*, a collection of professional quality objects for *Cinema 4D* and *MaxonMULTIMEDIA*.

The show was also host to many presentations and conferences for Amiga developers.

The SX32 is a second generation CD³² expansion which should arrive in the UK shortly.

One of the stranger exhibits was this twin Tower system.

AMIGA TECHNOLOGIES AND

The product of close co-operation between Phase V and Amiga Tech., the Power Up PowerPC accelerator will enable owners of existing Amigas to enjoy the benefits of RISC technology.

In this busy environment the stands that attracted the largest crowds was the Amiga Technologies and Phase V stands. This is quite understandable since several new products were on display including the A4000T, the Power Up PowerPC board, virtual reality i-glasses, Blizzard 1260, the Q-drive 1241 CD-ROM drive, music and networking software, as well as an all-new C++ compiler.

On the Amiga Tech stand I passed by Petro Tyschtsenko several times without recognising him as he was dressed in jeans and a T-shirt while handing out leaflets.

In keeping with the current Internet craze, the busiest section of the stand was the network area where several Amigas linked via the latest version of Interworks' ENLAN-DFS hardware and their I-Net 225 and T-Net software. The ENLAN-DFS adds ethernet connectivity through the A1200's PCMCIA port while I-Net uses the TCP/IP protocol to connect to the Net. Of great interest to 3D buffs was the T-Net LightWave render farm software, which makes sharing rendering projects between machines easy.

As there has been a drought of C++ compilers, it was little wonder that the Amigas running the new Storm C compiler were surrounded by eager programmers. We can expect to see Storm C shipping in its international version some time early in the first quarter of 1996.

Surprisingly, there were more people viewing the i-glasses than the Q-Drive. This may be because, although this quad-speed drive is

Also on show was the new *Twist Organiser* which is based upon *Twist 2*. Not only does it use the power, relational features, DataTypes and flexibility of *Twist*, it will be available in a stand-alone version too.

You can expect many of the programs featured on the Maxon stand to be available from HiSoft in the U.K. during the early part of 1996.

ProDad's stand was another popular one with several video and graphics products on display. Along with their range of high-quality genlocks, such as the Neptun range, the stand had plenty of exciting software.

The latest addition to the ProDad range is *ANIMAGE* which is an impressive-looking composition package. This product has several special effects modules, including perspective

Two of the biggest sellers at the show were the Amiga Magic bundles and the new 1438 monitors.

and warping effects, and can load in projects from *Adorage* and *Monument Title*. However, its main purpose is compositing animations and creating transition effects. As with *ClariSSA*, *ANIMAGE* has a flexible and highly

configurable interface that enables you to open as many windows as you like. Along with these features *ANIMAGE* has support for several animation and image formats and even works with Vlab-Motion board.

Aside from all of this, there were several other products, such as an incredibly tiny HD floppy drive from Dell that is little bigger than a disk, version 3 of the German raytracer *Reflections*, *Wordworth 5*, *MainActor Broadcast*, the *DraCo* graphics station and several accelerators.

From the smiling faces and bundles of goodies it would be safe to say that a good time was had by all and hopefully we can look forward a similar show in the UK soon.

Continued overleaf ➔

Rendering and graphics were the unsurprising favourites at the show.

TOP: Squirrel MPEG unit (see feature). ABOVE: A disk-sized HD disk drive.

The 3D i-glasses were also present and provided a minor distraction from the rest of the event.

PHASE V STEAL THE SHOW

technically impressive, most serious Amiga users in Germany already have a CD-ROM drive.

On the Phase V stand the Power Up and Blizzard 1260 accelerators were drawing a serious crowd.

The Power Up board was the board developed hand-in-hand with Amiga Technologies to upgrade existing machines to Power PC compatibility and performance levels. The first board should be ready for distribution in the first half of 1996 and will be based on Motorola MPC603e processor.

This RISC-based processor will accelerate an Amiga to 100MHz and a later board based on the MPC604 is expected to run at 150MHz. The first board, the prototype of which was on display at the show, will be for the A4000 and boards for the A1200 and A3000 will follow.

The Blizzard 1260 is the A1200 version of the amazing Cyberstorm 060-based accelerator and can boost the computing power of an A1200 to over 80 MIPS (Million Instruction Per Second). This is two to three times faster than most 040-based accelerators and is a real blessing for those A1200-owners who are into 3D graphics. This board should be in production sometime during the first quarter of 1996 when more of the 68060 CPUs will be available.

The Q-drive 1241 CD-ROM drive from Amiga Tech. was impressive, but overlooked by most people.

This is a prototype of the Blizzard 1260 accelerator which give the A1200 the same power as the Cyberstorm.

Computer '95 Show Report

Anti-gravity (whose *Impact!* system is reviewed on p.88 this issue) proudly take their places at the stand of Activa, their new European partners.

Who was there?

Some developers had some "interesting" ideas about new designs for the Amiga 4000 Tower system.

DIGITA INTERNATIONAL

Digita International were also at the show. This Devon-based company will be familiar to most of you through products like *Wordworth* and *DataStore* which have become household names. Despite sharing a stand with MacroSystems, Digita still attracted a lot of attention in its right.

The two most popular products were the new versions of *Wordworth* and *Organiser*. The special preview version of *Wordworth 5* has several notable new features including: drag and drop style sheets, improved footnotes, background printing, wizards, support for 24-bit graphics cards, improved tables, AREXX support, cutting and pasting of paragraph formats, improved font handling and speed enhancements. Digita can be contacted on 01395 270273.

MACROSYSTEMS

MacroSystems have distribution centres in both Germany and the US and specialise in graphics hardware. Perhaps their most famous products are the Vlab and Vlab Motion digitisers. These boards were selling like hot cakes at the show on other stands, as well as their own.

However, their main attraction was the, Amiga-based, DraCo graphics station. This monster of a machine is based on the 68060 chips as standard, but also has an option for adding a DEC Alpha co-processor to give even more power. The DraCo also comes with a total of 10 expansion slots, a Vlab Motion board, a Retina graphics card, the Toccata 16-bit audio card, a quad-speed CD-ROM drive and lots more.

ACTIVA INTERNATIONAL & ANTI GRAVITY PRODUCTS EUROPE

One of the most noteworthy stands belonged to a new partnership – Activa International & Anti Gravity Products Europe. American company Anti Gravity Products joined forces with Activa to expand their operations into the European market.

Anti Gravity are a long-established company with their roots in computer graphics. Not only do they distribute LightWave and just about every utility, they also develop their own software and their production division, Anti Gravity Workshop, are responsible for top quality computer graphics featured in *Honey I Blew Up the Kid*, *VRS* and *Tales from the Crypt*.

Their expansion and partnership with Activa will be good news for European animators since the company will be bringing a number of products previously only available in the US. Activa International & Anti Gravity Products Europe can be contacted in the UK on 0181 402 5770.

Jeremy Rhyll was at the show with his pride and joy – the impressive *Wordworth 5*.

HISOFT

UK-based HiSoft were at the show too, attracting a great deal of attention with the new Squirrel MPEG unit and selling quite a few Squirrel SCSI interfaces.

The Squirrel MPEG on show was a fully working prototype that was showing some choice scenes from *Star Trek V* and did a great job in stopping about 80 percent of the passing crowds.

This unit can be attached to most SCSI devices and can even be used, via a remote control, with just a CD-ROM drive to playback films. The unit will be available in early 1996 for around £180 and should do exceedingly well.

For more details, call HiSoft on 01525 718181.

MAGAZINES

One of the pleasant side effects of the press conference was the presence of Amiga magazines from all over Europe. Three of the most notable were from Germany, Spain and Poland.

The German magazine, *Amiga Plus*, is published by the show's organisers ICP. The magazine itself is perhaps the most varied of the three and covers a great deal of subjects, including plenty of reviews and some tutorials.

The Spanish magazine, *Amiga Info* is actually published by some of the students and professors of a Spanish university. It has a slight bias towards graphics, but is still very technical.

Although all three mags are very technical, the Polish magazine, *Amiga Magazyn*, was even more technical. As well as the usual reviews, there were several complicated hardware and programming projects.

THE AMAZING SURF SQUIRREL INTERFACE

£99.95
plus P&P

The powerful Surf Squirrel™ interface is the cutting edge technology for easy A1200 expansion. Providing a high performance SCSI-2 interface, Surf Squirrel permits easy addition of up to 7 SCSI peripherals, such as a hard disk, a Zip™ drive or a CD-ROM to your A1200; Squirrel is also the only SCSI expansion that is hot plug and unplug, requires no opening of your Amiga, no technical knowledge and does not invalidate your warranty!

But that's not all, Surf Squirrel also has a fully buffered, high speed serial port that is capable of performing up to 600% faster than the A1200's serial port, so Surf Squirrel gets the most out of your modem and your A1200 to make high speed file download, with multi-tasking, a reality not a possibility.

The package comprises the Surf Squirrel Interface, SCSI drivers, CD32/CDTV emulator, serial drivers, and an extensive, fully illustrated, user manual. Here are just a few of the reasons why the Surf Squirrel SCSI Interface is ideal expansion peripheral for your A1200:

- ★ High performance SCSI 2 hardware for easy expansion; supports up to seven SCSI devices.
- ★ No technical knowledge required, easy-to-use setup program included.
- ★ Compatible with any SCSI-1 and SCSI-2 peripherals.
- ★ Autobooting - boot from an external hard disk.
- ★ Hot plug and unplug - no need to power off to remove the interface.
- ★ All software drivers required for the connection of CD-ROMs or hard drives included.
- ★ Includes a full CD32/CDTV emulator for use with a SCSI CD-ROM drive.
- ★ Fits externally - doesn't invalidate your A1200 warranty.
- ★ High performance, fully buffered serial port to give reliable data transfer at up to 230400 bps - dramatically reduces the time spent on the phone and your phone bills.
- ★ Industry standard 9 pin serial socket for easy modem connection.
- ★ Serial port is compatible with all comms, networking, and serial hardware.

How much faster is the Surf Squirrel?

Bars A,B and C are the maximum transfer rates obtained when downloading an ASCII, Database and Graphic file respectively, using a V34/VFC modem. Bars E,F and G are the maximum transfer rates obtained when downloading an ASCII, Database and Graphic file respectively, using a V32bis modem.

Order Hotline

0500 223660

To order any of the products shown on this page (or any other HiSoft title) - just call us, free of charge, on 0500 223660, armed with your credit or debit card; we will normally despatch within 4 working days (£4 P&P) or, for only £6 within the UK, by guaranteed next day delivery (for goods in stock). Alternatively, you can send us a cheque or postal orders, made out to HiSoft. All prices include VAT. Export orders: please call or fax to confirm pricing and postage costs.

THE SQUIRREL SURF PACKS

Surfing Starter Pack

£199
plus P&P

Surfing Super Pack

£299
plus P&P

MAKING THE CONNECTION

EMAIL • NEWS • WEB • FTP
GOPHER • TCP/IP • USENET

Start surfing with one of HiSoft System's Surf Packs. Designed for both the beginner and expert alike, the Squirrel Surf packs include all software, hardware and documentation to get you quickly, and easily, onto the information super highway.

Surfing Starter Pack

- ★ V32 Modem, capable of speeds up to 14,400 bps.
- ★ Surf Squirrel interface.
- ★ Termite communications software - powerful yet easy-to-use, perfect for BBS and CIX access.
- ★ Free CIX registration (worth £29).
- ★ Simple installation.

Surfing Super Pack

- ★ V34 Modem, capable of speeds up to 28,800 bps.
- ★ Surf Squirrel interface.
- ★ Termite software.
- ★ Free CIX registration (worth £29).
- ★ All the tools you need for internet cruising, ready-to-go, no set-up.
- ★ Simple installation.

The SCSI MPEG Player for your Amiga, Atari, Macintosh & IBM-PC Compatible

- ★ Bring the cinema into your home and onto your computer with Squirrel MPEG™. Playing the popular VideoCD and CDI CD-ROMs as well as raw MPEG streams, Squirrel MPEG brings high quality digitally mastered images and 16-bit stereo sound to you and your Amiga.
- ★ Squirrel MPEG is a SCSI peripheral that can be used in conjunction with any SCSI controller, such as the Classic Squirrel™ or Surf Squirrel™, and any VideoCD compatible CD-ROM. Squirrel MPEG can also be used as a stand-alone unit, with a SCSI CD-ROM, as an addition to your TV, Video and Hi-Fi setup.
- ★ Available from January 1996, Squirrel MPEG is the latest in an established line of ground-breaking products, for you and your Amiga, from HiSoft Systems.

TWO MAGIC OFFERS FROM HISOFT

SURF SQUIRREL

Do you own a Classic Squirrel SCSI Interface? Then send it back to us and upgrade to Surf Squirrel for only £64.95 plus £4 P&P! (UK only)

SQUIRREL MPEG

Special Introductory Offer
Order the Squirrel MPEG before 31 January 1996 for the low price of only £199 plus £4 P&P. (All orders will be shipped before 28/2/96, no money will be taken before despatch)

A Touch More Amiga Magic

SCSI ZIP DRIVES

£189
includes
Squirrel SCSI

Amiga Zip Tools exclusively from HiSoft

Zip drives from HiSoft include everything you need to get going on a SCSI-aware Amiga: the Zip 100 drive, a 100Mb cartridge, all necessary leads and a complete set of software, programmed by HiSoft, including:

- Easy access drivers
- Temporary unprotect
- Password protect
- Cartridge initialisation
- Write protection
- Cartridge eject

Since being introduced, the Zip™ Drive has caused a storm in the storage industry, offering an unrivalled level of price, performance and reliability. This newest, most portable exchangeable hard disk drive weighs in at just 1lb, has fast transfer and access times (up to 1Mb/s transfer, 28ms seek), easily fits in your hand, your bag or your briefcase, stores up to 100Mb on floppy-sized disks, is perfect for all types of application and is priced at a level that will make you want to unzip your wallet immediately!

Price inc 100Mb cartridge, extra 100Mb cartridges £15.95 or less!

Order your Zip drive now to avoid disappointment!

SUPERDOUBLE CD PACK

Includes 2 free CDs

£189
includes
Squirrel SCSI

The superb SuperDouble CD-ROM is back! Using an excellent 2.4 speed drive from Sony, this CD-ROM provides outstanding performance at an amazing price. With a 360Kb/s data transfer rate and a 230ms access time, the SuperDouble CD-ROM provides all the speed for the power user.

The SuperDouble is fully compatible with the new Squirrel MPEG card, supporting the industry standard VideoCD (White Book) format.

The SuperDouble CD-ROM pack includes the award-winning AGA Experience CD-ROM - rated 93% in issue 79 of Amiga Format. This CD-ROM is crammed full of pictures, utilities, demos, animations and tools for AGA Amigas. The SuperDouble pack also includes the latest Aminet CD-ROM. This disk is brimming with the latest PD, shareware, utilities, demos and picture files from the Aminet archives on the internet.

A full classic Squirrel is also included in the pack. This allows easy connection of any SCSI peripheral to the A1200. The package has all the necessary drivers and software for easy connection of hard drives, CD-ROMs and removable disk drives, such as the Zip™ Drive, to your Amiga.

Cinema4D™

Professional Ray-Tracing and Animation for your Amiga

£199

Cinema4D is the easy-to-use ray-tracing and animation system for your Amiga. Equipped with an intuition-based multi-tasking editor, Cinema4D is replete with every conceivable option including window-based real-time interactive modelling, direct modelling in 3D, basic and complex primitives with infinite variations, easy object manipulation, floating toolbars, user-defined menus, object and texture lists, definable object hierarchies, optimised versions for 68020 (A1200 etc.) & FPU's, and much more!

The Cinema4D animator brings you even closer to the world of "virtual reality", breathing life into objects and scenes. Whether you have your spaceship dock with a spacestation, or take a tour around the darkest dungeon - with Cinema4D it's so simple. Just a few mouse clicks and you

will have your objects move realistically through time and space.

Cinema4D also includes MagicLink, the flexible object converter. MagicLink converts all popular object formats (Imagine, Sculpt, DXF, Reflections, etc.) to Cinema4D format & back.

DiskMAGIC

Easy File & Disk Management

£39.95

Constantly doing battle with the Shell/CLI? Stop this futile struggle with DiskMAGIC, the easy-to-use file and disk management utility from HiSoft.

DiskMAGIC simplifies every task you perform, from the copying of disks and files, to the viewing of pictures and anims. In fact, after using DiskMAGIC, you'll wonder how you ever used your Amiga without it.

1995 REVIEW

JANUARY FEBRUARY MARCH APRIL MAY JUNE JULY AUGUST SEPTEMBER OCTOBER NOVEMBER DECEMBER CHRISTMAS

Dale Bradford bids a fond farewell of the year 1995 and brings you the edited *Amiga Format* highlights.

Maybe I could start with that old faithful "it was the best of times... it was the worst of times...", but I won't. Even though it was.

At the end of 1994 I was talking to a software publisher and he said that when Commodore first hit trouble, and the Amiga disappeared, some people in the trade were thinking along the lines of granny being in hospital for a minor operation. As the

months wore on, though, and Amiga missed last Christmas, the analogy changed to granny being in hospital and she isn't coming out. At all. Ever.

Well Amiga did return, thank goodness, and, all things considered, 1995 will go down as being one of the more eventful years in its history. Join me now for a stroll through 1995, as seen through *Amiga Format*'s eyes...

JANUARY

The year began for us with our January issue, launched, somewhat confusingly, at the December *World Of Amiga* show. The show itself was excellent, marred only slightly by the failure of the David Pleasance/Colin Proudfoot alliance to announce officially that their MBO had been successful (ahem), and the total collapse of Team 17's 'hard-drinking-northerners' reputation.

Nick Veitch and myself met many of you on the splendidly-adorned AF stand and hundreds of you took advantage of our special show offers and subscribed for the coming year. I hope you've enjoyed it and trust you will all be renewing? Maybe we'll meet up again at the next *World Of Amiga* show...

January's AF came with three disks,

including the full version of AMOS Professional and demos of the wonderful SWOS, the pretty Lion King and ATR. Then-editor Steve Jarratt looked back over the previous year and called it "One of the most tumultuous years in the history of Commodore and the Amiga." He should have stuck around...

We promoted our AMOS Coverdisk with a competition for you to write your own game and a feature on what to do with it once you'd written it. SWOS was Gold rated, as was Theme Park 500, while Rise Of The Robots earned a stinging 19%.

In the serious section, Wordworth 3.15E picked up a coveted Gold award and we were so impressed with it that we... (see April). Elsewhere in the industry, Sony were beginning to pick up significant coverage for some console or other they intended launching this year.

LEADING COMPETITION GOLD AWARDS	
1. BRAN DENNE	LEEDS UNITED
2. RED WALLACE	LEEDS UNITED
3. CHRIS BUTTON	BLACKBURN ROVERS
4. CLIVE THOMSON	SWITCH TOWN
5. PAUL FURLONG	CHILTERN
6. MIKE RUSH	ALDERMOUTH
7. MARK STEIN	CHILTERN
8. JOHN RASHMAN	WATTON VILLAS
9. MIKE HARRIS	SWITCH TOWN
10. GARY HOLLISTER	LEEDS UNITED
11. PAUL REDDIT	SWITCH TOWN
12. MARK ROBERTS	WATTON VILLAS
13. DENIS SPENCER	WATTON VILLAS
14. STEVE REDDLEY	SWITCH TOWN
15. TEDDY (SHAW)	WATTON VILLAS

FEBRUARY

The man at the top, David Pleasance, continued writing for *AF*, but was still unable to make an announcement concerning his much-touted MBO. Steve Jarrett bade us farewell, to ply his trade with a magazine devoted to some console or other, but we were far too busy going "ooh" and "aah" at the gloriously Gold-rated *Photogenics* to notice.

Our Coverdisks contained a *Datastore* demo - which included a complete index of previous *AF*s - and *Cannon Fodder 2*. The computer industry normally takes a quiet nap during February, after the pressures and stresses of the December/January period and this year was no exception. Very little else of note occurred.

MARCH

Our pop-tastic March cover heralded the arrival of the jolly useful Squirrel SCSI interface from HiSoft. Very reasonably priced at £69.95, new editor Nick Veitch quickly slapped a Gold on its cute little nuts (and bolts).

Steve Bradley spent far too long playing *Death Mask*, one of the first *Doom*-clones to arrive, but kept his Gold badge firmly in his pocket; despite the excellent two-player option, it didn't quite reach the standard we expect of a Gold.

We were all terribly excited when Ramiga sent us a tower case for our 1200, but there were considerable guffaws at the price.

We had received so many telephone calls from readers wanting to know more about *Photogenics* that we, rather helpfully I thought, included a demo version of it as our Coverdisk, along with *Super League Manager*.

APRIL

One of the most useful Coverdisks we have ever given away took pride of place on our cover (along with a picture of Mr Pleasance and a caption saying 'End in sight for Commodore saga' - doh!), it being the totally brilliant *Wordworth AFC* - a full version of the number one Amiga word processor (incidentally, did you all figure out what the *AFC* moniker represented?).

Steve Bradley was clearly annoyed

about something this month and took it out on poor defenceless *Akira*, calling it: "An eagerly-awaited pile of unmitigated, dated, shabby tosh". It didn't win a Gold.

April also saw the introduction of a new page into *AF* - *Format Forum*, where we solicited replies from our readers to questions we asked. Well, I thought it was a good idea...

MAY

Another brilliant Coverdisk. May had the full version of the "ohmybloodyGodit isyouknow" *Bars & Pipes Professional* - a £300 product! Unsurprisingly, music played a key part in the mag's content.

The games Coverdisk compilers managed to squeeze playable demos of both *Alien Breed 3D* and *Death Mask* on to a single disk for a battle of the *Doom*-clones.

A switched-on *AF* newshound reported that German retail and PC manufacturer Escom had joined the buyout saga, which was still dragging inexorably on, while messrs McGill & Bradley amused themselves for hours in the back room with *Super Skidmarks 2*.

This meant that poor Graham Sandiford was forced, against his will, to review *TFX*. He loved it and pinched one of Mr Bradley's Golds to hand away.

Bradley, piqued that he had missed out on a goodie, urged potential buyers of *Whizz* to "take a look at life, instead." Golds in the serious section included the Piccolo 5D64 graphic card and the Amitek Fusion genlock.

JUNE

The cover we'd waited all year to use was finally pressed into service. Sold. At bloody last. *AF* left the rest of the industry sleeping with our exclusive feature on the sale which, happily, coincided with our glorious '10th anniversary of Amiga' special issue.

Coverdisks contained *Pegger*, *Magic Storybook* and *Virocop*, and another exclusive centred on the Cyberstorm 68060 - a card for the man (or woman) who wants to own the fastest Amiga in the world, fluffy DICE optional. Other Golds from the serious section included *Directory Opus 5* and *Twist 2*, an impressive database.

A touch of poignancy came through the David Pleasance column (which, due to magazine time constraints, was written some weeks previously) when his replies to readers' questions still contained phrases like "When our purchase of the assets of Commodore is completed..." It was to be his last column.

The rest of the trade were being hyped into a fever of anticipation by the release of more details of some console or other. 3D0 retail prices were adjusted downwards to £349 in preparation for the scrap to follow.

JULY

After the euphoria of the previous issue, we fell into a vacuum of nothing appearing to happen. We printed details of what we'd like to see in a future Amiga to fill it.

A (working) version of *Sensible Golf* joined *Technosound Turbo 2* as our Coverdisks and Golds were awarded to *TV Paint 3*, *Powerscan*

Professional 4 and *ImageFX 2*. Hard man Steve Bradley duffed up *Strip Pot*, a truly awful strip/fruit machine hybrid, by giving it a lowly 10%.

The rest of the industry whipped itself into a frenzy (for a while) as Sega unveiled Saturn – and then quickly turned on them for shipping it without an RF lead.

3DO was reduced still further in price to £299, Future began advertising an 'official' magazine devoted to some console or other and, in the PC world, Windows 95 shipped to 'mixed' reviews.

SEPTEMBER

The glory that is Amiga Technologies was fully revealed in our in-depth feature on their new MD, offices, distribution policy, logo, machine spec' and possible price.

Ah yes, the price. One magazine predicted £199, the trade anticipated £299. Very few expected what actually arrived...

Our main feature was based on those stalwart software publishers still committed to the Amiga market. All the big names were there; there was... er, anyway, our 'Write a game in AMOS' competition winners were announced after a particularly gruelling week in the life of one poor hack who played all the entries.

Steve Bradley slapped a Gold on *Gloom A1200*, Graham Sandiford did the same to the snappily-titled *ProGrab24RT Plus* digitiser and the Apollo 1220 accelerator, and our Coverdisks contained *Maxon Magic Lite* and *Odyssey*.

The Amiga Magic bundle and price was announced, to – it must be said – a less than rapturous response from the trade, now orgasmic at the launch of some console or other.

AUGUST

By 'eck, it was a long hot summer. Relief (of a sort) came from our *Transition* and *Player Manager 2* (much better than the PC version) Coverdisks.

Details began to emerge of Escom's plans for the Amiga, including the reintroduction of the A4000T, we ran the biggest FAQ feature ever and Golds were dished out like Smarties to *Colonization*, *Real 3D v3*, *Photogenics 1.2*, *Digita's Organiser* and several PD CD-ROMs.

The industry sat up and took notice of what was happening in the Amiga world when Amiga Technologies announced plans to ship 60,000 units before Christmas. Then it went back to preparing for the arrival of some console or other.

Psygnosis, one of the first publishers to write Amiga software (almost a decade earlier) quietly disappeared, swallowed up by some Japanese corporation or other.

Amiga Tech. previewed their VR headsets to a somewhat bemused trade.

OCTOBER

We chose October to highlight the wonderful world of Public Domain with an impressively large six-page feature.

ShapeShifter was given special attention, as befits a Mac emulator which allows Amiga owners to run programs such as *PhotoShop* and *QuarkXpress*.

Steve McGill, not to be outdone, did his own feature born out of a decade of games playing, in which he suggested ways games could be improved with a little thought and effort.

Steve Bradley left our pages to work for a magazine officially devoted to some console or other and so it was left to the tall Scotsman to dish out a Gold to *Fears*, although he too displayed a hard streak when it came to unimpressive games. "I wouldn't recommend this to my worst enemy who had just set fire to my house and motorcycle after mutilating and torturing all my pets," he cried, somewhat dramatically, after giving *Subversion* a score of 10%.

Graham was so enamoured with the IOmega Zip drive that he quickly attached a Gold to its small, but perfectly formed case, then deftly flung another at *Scala MM400*, while our Coverdisks had fully usable demos of *Info Nexus 2*, *Data Nexus* and the rather cute *TimeKeepers*.

The Amiga finally returned to the shelves of UK retailers, with trade distributor SDL claiming over 200 of its accounts had placed orders. There was a little disappointment at the distinct lack of marketing being used to back it up, but early indications suggested the Amiga would have a respectable, if unspectacular compared to previous years, Christmas.

Within weeks, however, the clear waters of certainty were muddied by Amiga distributor SDL working under Administration, prompting supply problems for UK dealers. Elsewhere Sega slashed the price of Saturn to £299 in the wake of the success of some console or other.

SUBVERSION™ 1.0

NOVEMBER

The nights started drawing in and AF readers were given a very special package to fill their time. *Real 3D* took pride of place on both our cover and Coverdisk. The complete four-disk original 1.4 version of this powerful rendering package, squeezed on to a single disk. Amazing, eh? Accompanying it was a delightful five-level demo of *Tiny Troops*.

Inside, 3D was everywhere (it was in our 11-page special feature anyway), and Stuart Campbell carried on where Steve McGill left off with his article on games design, or lack thereof.

Pinball Mania, the AGA 'flagship' game from the Amiga Magic bundle was released as a stand-alone title, leaving McGill a little underwhelmed, while gone-but-not-forgotten Steve Bradley returned to castigate *Hollywood Hustler* for being worthy of no more than 15%.

The Falcon 040 board

earned a Gold, with *InfoNexus 2* just missing out and Deputy Ed, Sue Grant, was coerced into reviewing *Power Stitch 256 Plus*.

Thankfully, SDL were bought out of administration by an outside company within a matter of weeks, causing only minimum disruption to Amiga supplies. It was confirmed that the machine would get a High Street boost with Escom joining Tandy in stocking it, in addition to the hundreds of independent retailers still sticking by it.

It was announced that PlayStation (I've said it) sales had reached 50,000 in the UK - a success story causing the trade to begin counting the days until the launch of the Nintendo Ultra 64. In comparison, Saturn may just as well be re-titled Uranus, for reasons it's probably best not to go into, while consumers were able to buy a 3D0 for £199.

DECEMBER

We produced an in-depth report on Amiga Technologies first few months in charge, ending with a statement of account which concluded their efforts had been "reasonably positive". No damning with faint praise here...

Features within the mag included how to start your own diskmag and a three-page special from speed-freak McGill focusing on accelerators, expansions and upgrades. He then dusted down his chopper to review *Coala*, the curiously-titled helicopter sim from Empire. Something else with plenty of fizz in it was - finally - *Alien Breed 3D*. It earned a whopping 93% and the comment "One of the finest Amiga games ever".

Softwood were no doubt pleased with this issue, which saw both *Final Calc* and *Final Writer 4* gain Golds, while *Final Data* missed out by a whisker. Well, a few whiskers anyway.

Snap Maps modelling tools got 90% and we were so impressed with them that we included some on our Coverdisk, while those of a gaming bent had a demo of *Blitz Bombers* to play with.

The trade pricked up its ears at the announcement of new Amigas for next year, and Power Amigas the year after, but continued its PlayStation worship for the most part. Having said that, the fact that PlayStation software sales (by value) were more than double Saturn,

3D0, CD-i and Mega CD combined in October proved that Sony's machine was clearly winning the console war.

Back in Amiga land, joining that worrying incompatibility rumour of the month before was a gripe that *Scala* (bundled with the HD Amiga Magic pack) didn't actually work with the machine it accompanied, *Scala* requiring an additional 2Mb.

CHRISTMAS

Our special festive issue contained a full version (albeit time-restricted) of *Digita's Organiser 2*. Just the thing to help you remember - and keep - your new year's resolutions. Until the end of February, at least. Meanwhile on the games disk, the mighty *Worms* marched their way into your drives and hearts (probably).

We packed Anna Grenstam off to France, under the pretext of "looking over the new Amiga factory", but sadly she came back. Still, at least she managed to bring plenty of piccies of happy-looking French people, sticking Amigas into boxes.

Not to mention an interview with Amiga Technologies' John Smith in which, when asked if the bundling of *Scala* was a mistake, he replied "No, not at all." Excuse me? It was deliberate?

Super Tennis Champs breezed in at a very reasonable £19.99, causing Mr McGill to reach into the sacred leather bag of Gold awards, passed down to him from Bradley, and with just the briefest of pauses he

awarded another to *Worms*. Talking of insects, *Citadel* missed out on a Gold by an aphid's genitalia. The Blizzard 1230-IV and *Cinema 4D 2.1* had Golds bestowed upon them by our serious folk, as did several PD CD-ROMs, and the magazine also contained an, er, unusual and informative feature on using your Amiga as an astronomy aid. Nice one.

This issue also marked the passing of the *Format Forum*. The columnist took his

revenge by revealing to the Amiga community Editor Veitch's weak spot - an alarming tendency to burst into one of Smokie's greatest hits during times of stress. Veitch was not too worried, reasoning that not everybody read the *Forum*. So the columnist thought of a

more insidious way of exposing him...

At the time of writing this, Christmas hasn't actually happened, so it remains to be seen how the Amiga has performed this year. However, whether or not the 60,000 units the UK was allocated have all found new homes is not really of prime concern. It would be great if they have, of course, but the most important thing is that the Amiga is back. Perhaps not with as big a bang as some of us would have liked, but with a fairly loud noise at least.

Also, despite what some would have you believe otherwise, it does have a future. Consoles come and go - indeed their lifespan seem to be getting shorter than the average mayfly's - but Amigas will still be used to great effect long after PlayStations and Saturns have been consigned to that great cupboard under the stairs in the sky, if I may be allowed to mix my metaphors so outrageously (hey, come on, this has

been a long piece...).

Naturally, we all await with bated breath more details on the next generation machines and look forward to 1996 being considerably less 'tumultuous' than the previous two years.

Octamed 6 CD

The Official Octamed 6 CD contains the full commercial version of Octamed 6, the latest version of this superb music utility. In addition the full 'Walkabout Music' samples collection (over 1000) have been included. To complete are 100's of megs of modules, samples and midi files, fully categorised and ready to run from the CD. This is a unique opportunity to obtain the best Amiga Music package and as an added bonus we include the full manual all for only:

£29.95 including manual

NEW TITLES

The Assassins

Ultimate Games Volume 2

Comprises of hundreds of games for the CD32, CDTV and Amiga range of computers. All of the games are accessed via an easy to use menu system. Also included on this CD are the entire Assassins floppy disks 1 to 250, 60 packed utility disks and other various games disks. The games on the Assassins CD Volume 2 are not repeated from the first CD, but are all new games with full instructions for the games accessed from the menu system. This CD has been tested on the CD32, CDTV, Zappo, Power Drive and Amiga 4000. The CD contains over 600 games and compatibility is clearly stated for each game on the CD. (300+ for CDTV, 500+ for CD32 and 600+ for the Amiga 1200.) All this and more for only.....

£19.95 (and get Assassins CD 1 FREE!)

Network CD 2

Network CD has been long recognised as the definitive way to join a CD32 to an Amiga with a plethora of aimed at the transfer of information between the two machines. It enables the access of compact discs on the Amiga by using the CD32 as a slave drive. With the release of Network CD 2, Weird Science are proud to announce that the networking of the CD32 to an Amiga is about to change beyond all recognition, with emphasis purely on speed and ease of use. Network CD 2 provides a new easy one button set-up of any of the tools on both the CD32 and the Amiga. Sernet now runs at far higher speeds than ever before and includes keyboard and mouse emulation from the Amiga. Twin Express can now be controlled by Directory Opus 4.12 (not included). Every aspect of the original CD has improved with many more features than described here.

David Pleasance, Richard Knox and Ed Farmor form Tangent Music design.

On their own path

Ex Commodore UK head, David Pleasance thinks that there has been enough bad Amiga news. Maff Evans catches up with him at the HQ of Tangent Music Design – his vision for re-establishing the Amiga as the creative machine.

The control hub of the studio is an Amiga Tower running a program that'll be familiar to AF readers – Bars and Pipes.

With the Amiga having been out of the marketplace for a year, it's almost inevitable that the light is going to fall on other machines at the pro end of the creative market. This hasn't helped matters as far as Amiga musicians are concerned, since that's one area where the Amiga has been sadly overlooked for far too long.

This state of affairs prompted David Pleasance to team up with musicians Richard Knox and Ed Farmor to form Tangent Music Design – a partnership intent on demonstrating the fact that the Amiga *can* produce results just as good as any other music computer.

"It was about a year ago that we thought of the idea," says David. "Another company had always, in our opinion, wrongly claimed to be the *de facto* for music computers. So we decided that we would set out to prove that we can produce world-class quality music using the Amiga and give the five and a half million Amiga owners worldwide something to be proud of."

The result is *Everybody's Girlfriend*, a collection of songs and performances from a number of artists, all worked into professional recordings by Richard and Ed. The title is a pun on the name 'Amiga' – the Spanish word for girlfriend – but there is another side to the name, as David explains:

"To be frank, songs about computers would be boring after the first chorus. We decided that if we based it loosely around the girlfriend theme it wouldn't be boring, but it would still be linked to the Amiga in terms of inspiration. We wanted to put a stamp of quality on the kind of product that Tangent could come up with, so we decided to make the album as diverse as possible."

The album does indeed contain a hugely varied range of music styles – from pop to rock to Spanish Flamenco guitar (see? It links even further).

"The one thing we decided not to put on the album was any dance or techno music," Richard points out. "Not because we've got anything against that type of music, but because we think it's been catered for more than enough in terms of computers in general."

"What we tried to do is aim at a live feel on virtually everything," Ed agrees. "What we aren't used to hearing is

something coming from computers that sounds like a live band. We're so used to hearing drums that is impossible to play unless you've got four arms or something, that we deliberately set out to make it so that it's possible for a drummer to play. It's a band thing – we can support anything from the album live. We can do everything in a live situation and use the Amiga as support."

PASSION

Richard and Ed's live ambitions (playing under the name Passion) are a handy by-product of the album project, and David is keen to push their careers as musicians to the full extent, but it's *Everybody's Girlfriend* that's taking all their time. At the moment Ed and Richard are working on a mix per day for 14 days to get things finished – a feat unheard of in studios. The reason for the tight deadline is the usual chain of frustrating events.

David and Ed had the basic studio equipment set up in the house they shared when the property was sold by their landlord. The equipment was put into storage until they were lucky enough to find an unused, purpose-built studio in September. Some new equipment was duly bought and the project resumed progress. Such has been the interest with other musicians, that they haven't had time to work with everyone who wants to be involved.

"The phrase that rings in my mind," says David with a conspiratorial smile, "Is 'Volume two'. Obviously there'll be more time to do volume two." "Oh good," mutters Ed with a sickly grin.

START TO FINISH

The Amiga doesn't just function as a studio tool and source of inspiration – it plays an integral part throughout the production process. Ed and Richard work on rhythmic patterns and sequence ideas with their images, transplanting them alongside ideas played live. The duo then bounce ideas off each other in the studio, beginning to program the tracks into the studio's Amiga.

Everything is played in live from a Roland MK-80 digital piano and streamed out of the Amiga to the rack of instruments via a Triple Play Plus interface – a clever box which enables the Amiga to play MIDI data out of

TOP OF THE POPS

The result of David, Richard and Ed's hard work is the album *Everybody's Girlfriend*, containing music created with and inspired by the Amiga – although not the usual 80s-style songs about computers.

"Whilst it is totally dedicated to the Amiga, the packaging won't reflect that it's an Amiga specific product," says David. "We believe that the album is so diverse that it will appeal beyond the Amiga market and obviously then we'll look to market it through distribution and the normal retail channels, but at the moment it won't be done that way."

Instead, the album is to be marketed directly to its target community – Amiga users. To begin with, you'll only be able to get hold of it via mail order directly from Tangent, which cuts out distribution costs and shaves a few quid off the end price – £11.99 as opposed to the usual £14.99 in the shops.

TAKE CONTROL

The control hub of the studio is an Amiga Tower running a program that will be familiar to many Amiga Format readers.

"Everything that's been written has been done on the Amiga using *Bars and Pipes*," enthuses Ed. "Drum programming on *Bars and Pipes* is a doddle. I'm not sure we could get that kind of feel on anything else. It seems to come out exactly how I wanted it."

Richard takes up the recommendations:

In a lot of cases we wanted the human feel in there and that's what *Bars and Pipes* is really good at. It tends to leave everything as it's recorded."

"If there is a bugbear with *Bars and Pipes*, it's that there's too much on it," Ed points out, illustrating the power of the classic program. "We use it as a standard sequencer, we don't use all the tools. We find that the tools we do use, we use time and time again - things like quantize and Doctor of Velocity. That's about it."

And it's all easily available too. In fact, *Bars and Pipes* was featured on the Coverdisk of AF71, so get hold of a back issue to put yourself in line with the pros.

three separate outputs, tripling the number of channels they can use. The Amiga is even being used to produce the final CD master, thanks to a (rather expensive) gold disc cutter in the studio. Ed explains how the Amiga is used to create the CD template:

"We'll spit everything down into a Sunrize card on the Amiga, cut and splice it how we want, spit it back out on to a gold disc and send that off to be glass mastered (the actual disc used to press up the CDs that will go on sale). We haven't got to that stage yet, so we don't know what the pitfalls are going to be. I'm sure whatever they are, we'll get round them."

One glitch that has surfaced in *Bars and Pipes* is that it won't synchronise with the digital tape recorders used in the

studio. The problem could have been solved with time and patience, getting Blue Ribbon in the US to turn back to the Amiga and sort things out, but time is one luxury that isn't available. To get around the problem, they save the sequences as MIDI files on to DOS disks and load them into an Apple Mac.

"One thing that's worth mentioning is that the files we took from *Bars and Pipes* transferred completely across to the Mac," says Richard, defending the program. "We didn't lose a note. Again that's something that worked very well in *Bars and Pipes*."

BRANCH OUT

Although *Everybody's Girlfriend* is a showcase for the music capabilities of the Amiga and *Bars and Pipes*, David is keen to branch out even further and set up Tangent as a major force in computer audio.

"One of the things we're pursuing actively is that all of the developers producing games need music. I've spoken to most of them and said, 'Look, I know you're already out-sourcing music, so why not out-source it to somebody you already know who needs the money?' They've all been pretty responsive to that so far."

So it looks like Tangent and Passion are names that will be cropping up more frequently in the near future. Richard and Ed are working hard enough to get their career off the ground and David has enough vision to attack various entertainment markets.

"We're also in close association with some people that are involved in producing 3D graphics and rendering animation," he elaborates, "So between us we can tackle any task."

Does that mean that Tangent Music Design could become a fully-fledged multi-media company?

"Of course, yes. I think it's very important."

Looks like the name Tangent could soon find its way on to your CD player, Amiga, video and stage of your local venue soon and, to be honest, it's about time the Amiga's reputation in creative areas matched its capability. AF

"We decided that we would set out to prove that we can produce world-class quality music using the Amiga."

The multitask recorders and synth & effects rack. At the moment Tangent are working on a mix per day.

Drum programming on *Bars & Pipes* is a doddle.

IT'S A MONSTER!

The fastest-growing area in studio technology is hard disk recording. The Tangent boys are pretty excited about a new product about to be unleashed on the pro music market that could revolutionise the use of digital recording systems... And it runs on the Amiga. A pretty pokey Amiga, but an Amiga nonetheless. Put together by Silicon Studios, it's an extremely powerful, recording, sequencing and editing tool to rival the all-powerful Mac system, Pro Tools.

"It's already made," says Ed, looking forward to getting his hands on it, "but it needs an 060. It takes over the whole of the Amiga and turns it into a hard disk recording system with however many tracks you want. It will cater for virtual dynamics as well, so all your gates, compressors and limiters will be on board."

Tangent is due to be a test site for the new system, with Ed and Richard contributing ideas to enhance the specifications. One such idea to be implemented is the ability to trigger high-quality samples directly from the Amiga, enabling the system to act like a combined rack sampler and hard disk recorder - something unavailable on any other system. It's also probable that it will be cheaper than anything else around at the moment. Who says the Amiga can't be a serious music tool?

Everything is played in live from a Roland MK-80 digital piano and streamed out of the Amiga to the rack of instruments.

MPEG

What secrets lie behind the technology of full-motion video? Why is it so under-used and, more importantly, what could it mean for the future of the Amiga?

Digital video has almost the same status as the holy grail. Whoever develops a standard that can record and play back full motion video at acceptable quality and only taking up a reasonable amount of storage space will own the future of broadcast media.

The only inroad has been made by MPEG, the standard set by the Motion Picture Experts Group. While it may not have all the answers, it is a proven technology which is here now, not one still in the conception stage. It has a number of real world uses, not simply entertainment and, thanks to Hi-Soft's new Squirrel MPEG device, it is a tool which Amiga owners can use cheaply and effectively. Combined with the Amiga, MPEG delivers a true multimedia system at the lowest price possible.

So let us now investigate the technology that lies behind MPEG and why the Amiga makes it great.

THE NEED FOR COMPRESSION

Video information is notorious for taking up large amounts of storage space. A single snap-shot from video can be so detailed and contain so many colours that it can easily consume over 1Mb of memory or hard disk space.

When you consider that moving video requires 25 frames of video a second (or 50 "fields"), it's easy to see that there are many problems inherent in combining computers and video.

How can you move about 25Mb of data a second? (Remember that the speed of a single-speed CD-ROM drive is only 150K a second, although the standard is now double-speed which is 300K a second). How could you possibly store a thirty minute soap-opera which could take up to 50Gb of storage...

The answer is, of course, that it is impossible. At the moment computers powerful enough to store and manipulate data like this are not available. Even a fully powered-up Amiga 4000 with a 68060 and dozens of megabytes of RAM and SCSI2 hard drives couldn't get close.

So if you can't move around this

Here you can see some of the visual "artifacts" caused by the MPEG compression algorithm. At the area of high contrast there is a noticeable "blockiness". This can be reduced by intelligent compression, but will always be present to a slight extent.

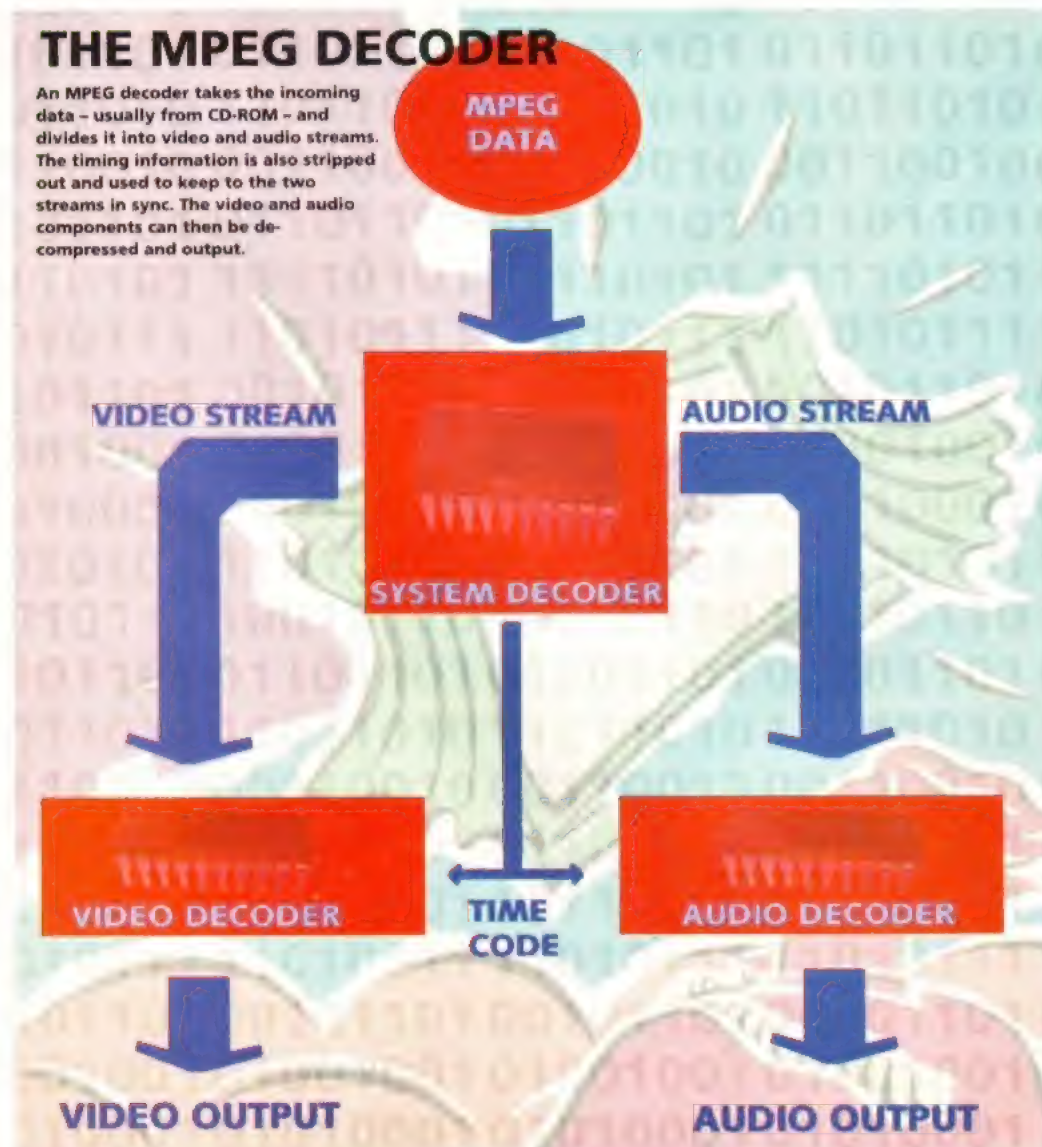

amount of data, it makes sense to move around a lot less. Why not compress the images and deal with them in this form?

Again, there are problems. Traditional compression algorithms are best when it comes to squashing data which contains a lot of similar values.

For example, an image which is a large, plain-coloured rectangle will squash down to a few bytes. However, a detailed image – such as frame of video – contains a great deal of data and it will squash down very badly indeed. The effort involved means that traditional compression routines are useless.

THE MPEG DECODER

An MPEG decoder takes the incoming data – usually from CD-ROM – and divides it into video and audio streams. The timing information is also stripped out and used to keep to the two streams in sync. The video and audio components can then be decompressed and output.

THE ANIM AND CDXL STANDARDS

You might be wondering how well the standard Amiga animation techniques work; after all, the Amiga has been replaying animations for years before other computers started to get their acts together. If you can remember the CDTV player, which used a special form called "CDXL", CDXL was in many ways ahead of its time, because it was capable of replaying video back from single-speed CD-ROM.

Unfortunately, all these systems suffered badly when asked to deal with video. Video contains too much information and the poor old Amiga can't cope with the files as they are still too large. CDXL was a good first attempt, but the quality was extremely low (HAM mode in a resolution on 160 by 128 pixels) and the frame rate poor.

USING JPEG

Many art and paint programs make use of the JPEG system. JPEG is a standard for storing images. It analyses images mathematically to actually discard details which will probably not be missed. As a result, detailed images compress very well with JPEG. "Natural" (i.e. photographic) video images in particular can be compressed to a tenth of their original size. Why not use a system based on JPEG?

As you will have seen when you have used a program which uses JPEG, it takes a considerable time for the image to be saved and loaded. The image processing which goes on behind the scene is tricky and it is clearly

HOW MPEG WORKS

To make each frame of a sequence of video as small as possible, each image is heavily compressed.

The original frame is first reduced in size by a quarter, to a resolution of 352 by 288 pixels.

Each frame is then split into three parts: an image which has only the brightness information, an image with the green component and an image with a blue component. The green and blue images have a resolution half that of the brightness image.

Each of these images is then compressed by running the data through a special DCT filter which compresses areas of the image depending on the amount of contrast present. The playback process re-combines the three compressed images to produce the final picture.

impossible to make a decompression routine which would play back JPEG images in real time.

However, if you build a special chip which is dedicated to JPEG compression you can manage to grab and squash a video frame in real-time. It is also possible to build a chip which can de-compress and display the original image in real-time too. These "Motion JPEG" or "MJPEG" chips are the heart of hardware such as the VLAB Motion card. By grabbing chunks of video, compressing it and storing it on disk actually make it possible to edit video in a non-linear fashion; you can cut and paste segments of video as easily as text in a word processor.

There is still a fatal flaw, even with MJPEG systems – each frame remains too large and it takes too much time to shunt all the files backward and forwards to make it a viable means of distributing video. It is possible to play back a MJPEG sequence from a fast hard drive, but not from the much slower CD-ROM drives in use today. Fine for video editing and mastering, but not for distribution to the masses.

WHAT IS MPEG?

MPEG is a compression standard which from the outset was designed to work at the sort of speed of which a CD-ROM is capable – about 1.5Mb a second. The plan was to make it easy and cheap to distribute video by using CD-ROM as the storage medium. CD-ROMs are a lot cheaper to manufacture and considerably more

reliable than bulky tape. CD-ROMs can be pressed in seconds and they never stretch, break, or disgorge their contents into your expensive video cassette recorder. Each CD would cost pence to make and hold up to 74 minutes of video.

As a plus, a video sequence stored on CD would also be non-linear, in that any frame could be reached instantly (well, near enough instantly anyway) without having to rewind or fast forward. The advantages are plain, but how can it be achieved?

In order to work at the relatively slow data rates imposed by CD-ROM, it was necessary to make several sacrifices. To start off with, the full screen PAL video image was simply too big to deal with and so it was decided to quarter the resolution to 353 pixels across by 288 lines vertically. It may sound drastic, but this still gives a quality which is very close to that of domestic VHS video tape.

The next big compromise was with colour. Experiments have shown that the human eye is more concerned with brightness detail, rather than colour detail. MPEG capitalises on this shortcoming by separating the image into brightness and colour information.

The colour information is then stored with half the resolution of the brightness information. Three "chunks" of data are required for each image – the brightness (luminance) information, the blue colour component and the green colour component.

As the colour components

are stored at half the resolution, this leads to the often-used shorthand "YCbCr 4:2:2", where Y is the luminance and Cb and Cr are the colour components. (And what about red? If the brightness is known, the two other components can be used to extrapolate the red information in time for the display to be constructed.)

HOW DOES IT WORK?

Compressing a frame is done as follows:

First of all, each component of the video frame (there are three, remember, Y, Cb and Cr) is divided into eight by eight blocks. Each block is then processed by a DCT or "Discrete Cosine Transform" which is a mathematical function which converts the image into domain frequency, effectively storing the contrast between pixels rather than the pixel values themselves – this is the same basic technique used by the JPEG image format. Since most video images don't contain areas of extreme contrast (black next to white, for example) this technique works very well.

Again, playing on the way in which the human eye works, higher frequencies (larger changes in contrast) can be converted more coarsely than lower frequencies (smaller changes in contrast). The resulting values are then arranged in a zig-zag pattern, which means they can be packed using traditional "Run Length Encoding" to save even more space.

Sounds complicated? That's because it is, and it takes a lot of processing power. There are plenty of other tricks too – MPEG allows different

blocks of 16 by 16 pixels to be compressed at different rates. For example, a person's face needs a lot of detail, whereas the background is probably slightly out of focus and can be coded with less detail.

On top of all that, MPEG deals with three different types of video pictures: the I, P and B. A stream of video will consist of each type and the decision when to use each one will have been made by the encoder.

Unlike a Motion JPEG stream, in which every frame is separate from every other, MPEG makes use of previous (and future) frames to predict the next image.

The different picture types are used to attain maximum compression. Type I pictures ("Intra" pictures) are

constructed using data only from the original image. Type I must therefore be used at least several times a second, so that when moving backward and forward in the sequence, a true and accurate image can always be obtained.

A type P picture is "Predicted" from the nearest I or P type frame. P pictures use special motion compression techniques, which means that they will take up less space than true I frames.

The third type, Type B (or "Bidirectional") gives the most compression and are therefore used most often in the video sequence. They are constructed from both previous and forthcoming frames using averaging and special motion compression.

B frames do require a lot of memory, though, since several frames need to be held and processed at once.

Because of the average used, B frames also happen to keep noise levels down.

The MPEG file must also include the digitised soundtrack (which can be 16-bit stereo) and special timing information to make sure no frames happen too quickly or too slow and get out of sync with the sound.

It's very hard for a computer to decide which part of an image is more important than any other part and, therefore, is in need of more detail. As a result, MPEG encoding is still an extremely expensive process; the hardware to do it still costs at least ten times as much as the hardware to decode and display the MPEG images.

To play back MPEG images requires the following of an algorithm, or list of instructions. The instructions can be followed automatically and although it's

THE AMIGA, MPEG AND THE FINAL FRONTIER

Although MPEG was designed for photographic images, photorealistic images like this rendered sequence from *Star Trek* can be realistically encoded. Unfortunately, editing

Squirrel MPEG

The SCSI MPEG Player for your Amiga, Atari, Macintosh & IBM-PC Compatible

SQUIRREL MPEG

The latest infonauts on the full motion video trail are Hi-Soft, most noted in recent times for their revolutionary Squirrel interface. Their latest, hottest piece of hardware also sports the Squirrel name, but this black box is no ordinary SCSI device – it's a stand-alone MPEG decoder.

The idea, if not the practicalities, are simple. The device attaches to the SCSI chain and accesses raw MPEG data, converting it to video and audio signals which can then be played on any TV/monitor/Hi-Fi.

A control connection to the Amiga allows the MPEG decoding to be software controlled and a SCART socket on the back delivers composite, RGB or S-VHS video out as well as two channels of audio.

The unit can act remotely too, so there is no real need to have it attached to a computer at all. Cunningly, the device can seek out compatible CD-devices attached to it. You could just sit your Squirrel/MPEG and CD drive on top of the TV and settle down to watch *Star Trek VI*, or *Hunt for Red October*, or one of the hundreds of other video CD titles that Philips have released.

The remote control handles visual search, pause, stop, play and, well, just about the standard controls you would expect to find on a VCR deck (except of course, record). The MPEG unit can act independently, because the decoding chip it is based around is very sophisticated and also because it has its own on-board processor.

But playing back video CDs is only a fraction of what you could potentially do with this unit. Since it accepts the MPEG stream over the SCSI bus, you can send any MPEG files to be decoded – from CD, hard-drive or wherever. If you are connected to a reasonably fast network (alas, a modem-based one is not nearly fast enough), you could play back data played out from somewhere else.

The image quality of the Squirrel unit far exceeds that of early MPEG decoders such as the CD³² module or the early Philips CD-i units. There is now quite a wide selection of films available in MPEG video CD format.

not simple by any means, it can be done. In fact, it is possible to squeeze the entire decoding algorithm on to a single chip, which will accept incoming data and provide a ready-to-use video signal.

Although we are only now seeing them appear on the Amiga, in a few years it is obvious that they (or their successors at any rate) will soon be integrated into the graphic components of all computers.

There are several software-only MPEG playback systems available for the Amiga; you only need to do a quick search on Aminet to dig up a few (amipeg04.lha for video, mpegal.lha for audio) and some example files too. Unfortunately, being software, they are all very slow and are incapable of being used to watch anything other than short

demonstration animations. Even with an Amiga running a very fast processor and a graphics card, it is not possible to achieve more than about twelve frames a second. Even on a Pentium-based PC the results are disappointing, and more and more users are buying hardware-based MPEG playback cards.

FUTURE ENHANCEMENTS

The MPEG compression system does butcher the video signal quite a lot and although the quality is pretty much the same or a bit better than VHS it's not good enough for many people. The forthcoming MPEG-2 standard goes back to the full-sized screen display and requires a data rate of up to 8Mb a second. MPEG-2 may well become the next true video standard, as it provides

a quality suitable for HDTV (High Definition TV) systems, as well as WideScreen format and multiple video channels in one data stream – ideal for satellite or cable systems.

At the moment, though, MPEG2 is still very much in the "not quite ready" phase and it will certainly be some time before an affordable system comes out of it (and bear in mind that current CD technology is not up to supplying the data at the speeds required).

MPEG, however, is here already, at reasonable prices and with many real world uses.

REAL WORLD!

Steve McGill visited Cleveland Constabulary to see how the Amiga can harness the power of MPEG in the real world

an MPEG movie on home equipment is simply not possible yet and MPEG2 encoders are going to be even more expensive, which leaves a niche for MJPEG systems.

Above: An example of potential uses for the genlock overlay – intelligent captions and logos superimposed over MPEG images. Systems like this would find a natural home in hotels and other network situations.

You might think that the chances of home-users being connected to a super-fast network is pretty remote, but I'll wager that a significant percentage of people reading this are connected up for cable TV. The cable network is more than capable of delivering the data at a high enough rate for MPEG transmission. Video on demand is not a myth, it is possible with today's technology.

The Squirrel MPEG unit also includes limited

genlocking features, allowing Amiga graphics to be superimposed over the MPEG picture. The quality of the genlock easily surpasses that of the budget range of genlocks available and could quite conceivably be used for FMV games, should anyone be *that* interested in developing them.

The price of this rather amazing piece of hardware should be below £200 and it should be released in January, when the on-board software is finalised. Obviously, *Amiga Format* will have a full and exhaustive review when the unit is finished.

In a way it is apt that *Wayne's World* was one of the first MPEG video CDs released, since Wayne ran a public access TV show. Cable TV and hopefully MPEG-equipped Amiga set-top boxes could revolutionise home entertainment.

Prototype for

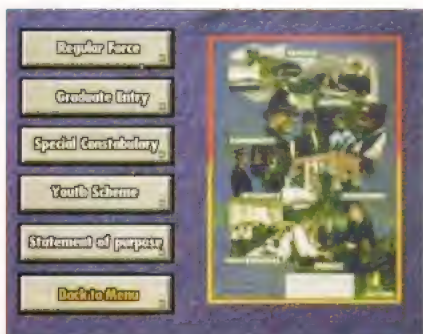

The theory and hardware behind MPEG are all very well. But how does it perform in practice?

By pressing one of these buttons, any MPEG video clip can instantly be selected and played.

The beauty of the master/slave network is that any terminal can be singled out and have access to certain information blocked out.

A network such as CCIN would also be perfect for recruitment purposes in an employment agency or similar.

Policemen who wish to view videos in private can request a tape to be made for them from the video unit.

A VISION OF PRACTICALITY

Tom Keegan, head designer of CCIN, is a man of vision and purpose. His vision is to cut through the inevitable inertia and miscommunication faced in a rigid command structured organisation like the police force.

Given that there's no room in the police force, or the world of commercial television, for sentimentality regarding the platform used by systems like CCIN, the big question remaining to be

asked is, "Why the Amiga?" Keegan offers the following by way of explanation:

"The Amiga is an ideal multimedia system and much more cost effective than a PC. After the troubles with Commodore we had a contingency plan which meant that everything could be transferred to a PC system if need be. Thankfully, it looks as if we don't need to use that option now."

It's not all that often that I've visited a police station and I've certainly never visited one voluntarily.

Yet, for the purpose of this feature, I found myself not only in the middle of a police station, but slap bang in the heart of Police Headquarters for the whole of the Cleveland, Teeside area. Scarey.

The reason? Simple. The Cleveland Constabulary Information Network (CCIN). A network that's set to revolutionise the working practice and procedure of Cleveland Police Force and, eventually, the whole of the UK Police Force.

The name CCIN belies the innovation and power of the up and running network. For it is, without prejudice, one of the most powerful and practical working set-ups to harness and showcase the potential of an Amiga network operating in conjunction with the practicality and convenience of MPEG video.

It is none other than a fully functioning prototypal pointer toward the future of television and interactive entertainment. A heady statement indeed, and one that needs to be qualified to appear credible. Here goes.

The efficient and cost-effective running of a police force depends on the free flow and accessibility of information at all levels of police operations. This applies to orders coming down to the ground from high command, to the ability of the beat bobbie to fully understand police procedure and the law, to the inter-relationship and co-operation between the police and the general public. Through the use of CCIN terminals, all of the above can be improved on and optimised.

Individual CCIN terminals resembles an overly large, blue swing bin with a monitor screen where the flap would normally be. Inside each terminal is an Amiga 4000/030 with

6Mb of RAM, a 1/2Gb hard drive, a Pegger MPEG decoding card, a Hydra network card and Scala's InfoChannel software installed. The monitor is a modified touch-screen CM8833.

There are 30 of these terminals dotted throughout the police stations of Cleveland and each one is a slave to the master A4000 residing in the video unit of Police Headquarters. They are connected through leased BT Megastream lines which, despite sounding fast, are merely standard dedicated copper lines, which aren't routed through an exchange; in other words, they're secure.

The master-slave set-up was chosen to avoid overload and the need for multi-plexing required of a client-server system. In effect, the master terminal can be thought of as a transmitter and the slave terminals as the receivers.

For much of what CCIN does relies on the ease of MPEG transmission and the ease with which video is absorbed by human beings.

UNBEATABLE

"Nothing can match video for immediacy" enthused Tony Thompson, CCIN's on-line system operator. "If it was a choice between watching a video and reading an instruction manual, I'd watch the video every time. That's the beauty of CCIN and MPEG video. We can tailor-make training packages here in the video unit and send them down to our terminals for immediate use."

In practice, several of these training packages resemble an interactive Full Motion Video game. All the officer is required to do is press buttons on screen and select his own path. The MPEG clips are arranged in small, self contained blocks that, unlike standard video tape, can be accessed in any order. This way, police officers learn things at their own pace and absorb more hard information due to the following of natural curiosity.

To help the video unit further optimise the training package aspect using MPEG video, each access is logged and stored on the terminals hard drive. Tom Keegan, the designer of CCIN, is keen to emphasise, without any prompting, that this isn't "Big Brother watching you", but rather a mechanism that lets him further enhance the packages and analyse which are the most and least popular.

Aside from training and appraisal purposes, the system also ensures that

the future

important events such as murder scenes and traffic accidents can be videoed and placed on the system.

"Traditional methods of information dissemination in the police force would see us sending out a video cassette with a scrap of paper, not knowing if anyone was bothering to look at it or not." With CCIN, the video is sent out to the terminals along with whatever information is relevant.

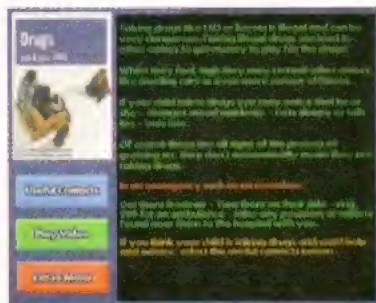

Particularly important information can be made to play in a closed loop when no one's actually using the system. Keegan offers an explanation: "Officers absorb the video information given out by the terminals subliminally. It can trigger their memory at any time".

The second phase of the Cleveland network is the placement of terminals in public buildings, such as libraries and sports centres. Keegan continues: "Crimestoppers on television is highly successful. Its main drawback is that it's only on at a certain time of the day. If the public had access to one of our terminals, the chances of more useful leads coming in would be substantially increased".

Finally, the video unit can cut their own CD-ROMs and CD32 software, allowing the sale of training packages to police forces around the country. Forces which don't have access to a system like CCIN.

The cost of £150,000 may seem like a lot, but in the world of public and commercial service it's peanuts. Cleveland Police hope to recoup the cost through the sale of similar systems to forces throughout the UK.

Amiga Format wish them well in their endeavours. Their success might just be the kickstart the Amiga needs to be taken seriously and given the high profile recognition it deserves and needs to survive against the PC colossus.

Drugs. Need to know where to get them? Don't try it out here. You'll get nicked.

AMIGA - THE FUTURE IS ALMOST HERE

With more than £1 billion being wiped off the value of cable companies shares, following the announcement that the Labour Party has entered into a pact with BT allowing them to compete directly with cable-TV companies, the need for a cheap, easy-to-use and cost-effective technology to harness cable's potential is of paramount importance if the cable companies want to survive.

As CCIN so elegantly illustrates, the Amiga offers the perfect solution to calm the fears of cable investors. Unlike CCIN, cable links offer wideband capabilities that would expand on and enhance the already impressive ability of CCIN.

Imagine the potential of a coalition of Hi-Soft with their MPEG unit; Power Computing with their processor and

memory expansions; Amiga Technologies with the Amiga hardware and CD-ROM drive; the games software industry with the numerous link games available; and the cable companies:

Video on demand that could be paid for as and when it's watched. Swapping and transmission of viewers' own video clips - look at the success of BBC2's Video Nation series.

Marry the above to the potential of networked games - a fantasy-based Sensible Soccer league would be perfect to kick off with - and you're looking at a force that could simultaneously take on the might of BT and win the imagination of the public in one fell swoop.

The technology's there, creating the demand is going to be up to those in charge of the companies we've listed above.

NATIONAL CURRICULUM

Pass exams with.....

LCL Self-Tuition

INCLUDES LANGUAGE COURSES THAT SPEAK!

Totally comprehensive (each is a compilation of **24 programs** with a book and manual, or equivalent except CD course which has 30) ...of excellent quality (eg. "LCL are the best for providing help in this area" AMIGA COMPUTING)

.....with far too many topics to list, but some examples are:

CD MICRO FRENCH (Beginners - GCSE)

CD32 or Amiga with CD drive • 30 programs including film-like ones • Extensive speech • Actors talk to you in French & you reply • Top CD Music etc

MICRO MATHS (11 years - GCSE)

24 programs equiv • Algebra • Geometry • Trigonometry • Statistics • Arithmetic etc

MICRO FRENCH (Beginners - GCSE)

24 programs • Real speech • Graphics adventure game • Talking cartoon etc

MICRO GERMAN (Beginners - GCSE & Business)

24 programs • Real speech • Graphics adventure game • Business letter generator etc

MICRO ENGLISH (8 years - GCSE)

24 programs • Speak & Spell • Punctuation • Grammar • Literature etc

MICRO SPANISH (Beginners - GCSE & Business)

24 programs • Real speech • Graphics adventure game • Business letter generator (1Mb) etc

MICRO SCIENCE Physics, Chemistry, Biology (8 years - GCSE)

24 programs • Tuition • Practical experiments • Learning by pictures • Adventure game (1Mb) etc

PRIMARY MATHS COURSE (3-12 years)

24 programs • Tables • Add • Subtract • Divide • Multiply (Long & Short) • Fractions etc

MEGA MATHS (A level course)

24 programs • Calculus • Algebra • Geometry • Full-screen graphs etc

101 GAMES
PRICE ONLY £9.99
Brilliant collection of over 100 of the very best PD games includes INVADER 2, Tetris, Monopoly etc. Far too many to list. VERY easy to use menu. Most games come with full instructions. MUST FOR ANY GAMES PLAYER. COMPATIBLE WITH ALL AMIGAS.

TETRIS + CARD GAME PACK
BOTH PACKS FOR ONLY £7.95
Classic Tetris games combined with plenty of card games like Poker, Pontoon, Black Jack etc.

TETRIS PACK, CARD GAME PACK AND BOARD GAME PACK
All supplied as one pack. A total of 13 disks crammed full of games £9.95

100 OF THE BEST AND MOST RECENT DEMOS RELEASED.
FOR ALL AMIGAS £6.95

GAMES CHEAT PACK
SUITABLE FOR ALL AMIGAS ONLY £4.95
Do you play your favourite games for ages but can't get to the end of levels? Are you having problems with some games? This 5 disk pack with thousands of games cheats/help/level codes/action replay/poke etc should help you finish more games.

LOADS OF XMAS CLIPART ON THESE SPECIAL XMAS DISKS £2.95

COLLECTION OF LOTTERY PROGRAMS
ALL FOR £2.95 Includes Balls (AGA), Pro Lottery and Lotto Lunacy, supplied on three disks.

100 GAMES
COMPATIBLE WITH ALL AMIGAS £9.99
This is the very latest: 100 Games Compilation Pack 2, containing some of the very best in PD games like Zeus, Wonderland, Dragonflies etc. FAR TOO MANY TO LIST.

HOME UTILITIES
ALL FOR £9.99 Loads of the more popular Home Utilities are included in this 10 disk set! Accounts, Organisers, Address Books.

ZX SPECTRUM 48K
SUPPLIED WITH INSTRUCTIONS £18.95
Now you can play 400 different 48K Spectrum games. Runs on all Amigas. Games include: Skool Daze, Manic Miner, Monty Mole, Star Trek etc.

1500 FONTS Only £12.99
One of the finest collections of fonts available. Suitable for DPaint etc or Scala, Word Processor, VBS, DTP etc. This pack consists of nearly 700 different types of fonts. Most fonts come in various sizes, making an estimated 1500 fonts. SUITABLE FOR ANY AMIGA (IFF FONT) DE LHA TOOL INCLUDED.

NETSURFER Only £5.99
All you need to surf the Internet highways with ease. The 6 disks include AmiTCP, Mosaic, GUIFTP, Grapevine, EEF's Guide to the Internet and more.

UFO THE CLOSE ENCOUNTER
A DISK SET ONLY £5.95
Incredible disk set pack with real life documents and reports, UFO sightings, kidnapping etc - many previously unreleased. Brilliant report of close encounter with UFO. A must for all UFO fans. COMPATIBLE WITH ALL AMIGAS.

to fly without wings...

Virtual Karting

A fast frenetic, seat of the pants 3D virtual racing game, for those who want to fly without wings!

VK is the fastest, smoothest, most detailed full-screen texture mapped game the Amiga has ever seen. Combining all the fun and action of karting into a totally realistic and mind numbingly fast driving experience. VK is fast!

It's Fast!...

In Association with

Karting magazine

Established 1959

- ★ 25 Frames per second full screen action, its fast!
- ★ Full texture mapped circuits and scenery
- ★ Fly-by helicopter circuit previews
- ★ Full 3D or 2D overhead game views
- ★ Qualifying and intelligent computer opponents
- ★ Realistic kart fx
- ★ Beginners, Advanced, and Expert tracks
- ★ 100cc and 125cc Karts
- ★ Hard disk installable
- ★ Amiga A1200 (AGA) only - even faster on accelerated machines!

the only driving
experience

AMIGA FORMAT

SCREEN PLAY

Steve McGill

This month witnesses the highest mark I've ever given a game in my short career at *Amiga Format*. *Breathless* is staggeringly beautiful and, more than anything else, highlights the untapped potential of a well-coded Amiga in the 3D engine department. Check out why I'm constantly sneaking off to the back room for a quick game when Nick isn't looking (don't tell him).

The one off-putting aspect of *Breathless* is that its unexpected arrival has somewhat eclipsed *Zeewolf 2: Wild Justice*.

Zeewolf, due to its intuitive mouse control system is one of my favourite games, yet the control system isn't readily accepted by most players due to its original trickiness to master. I would have loved to have seen an improved joystick option to open the accessibility of the game's undoubted superior gameplay to more people. It's still great, though.

Pinball Prelude is a pinball game and a half. The pleasant chaps at Effigy have played around with the physics and concept of pinball and come up with an amazingly entertaining game to play. Truly, they capture the spirit of independence that burns so bright among Amiga users and developers.

Hope you agree with me about *Breathless*. I'd be pleased to hear your comments.

AMIGA FORMAT'S REVIEW POLICY

Every month we scour the world's software houses for the latest and greatest Amiga games. We try to ensure we keep you as up-to-date as possible and we'll stop at nothing to bring you the best, definitive, no-nonsense reviews of the games that matter.

WHAT OUR REVIEW SCORES MEAN

- 90+%** The crème de la crème. Only the very best, most playable and original games are awarded an **AFGold** – the most highly prized rating there is.
- 80-89%** These games are very good, but due to minor flaws are not the finest examples of their genre.
- 70-79%** Good games which are worth buying, especially if you have a special interest in a game type.
- 60-69%** Average releases with somewhat limited gameplay and appeal. Games in this category tend to be flawed.
- 50-59%** Below average games which are unlikely to impress your mates or your wallet. Avoid.
- 40-49%** Overwhelmingly poor quality games with major flaws and appalling gameplay.
- Less than 40%** The absolute pits.

Reviews

Steve McGill

takes a look at what's up
and coming in the games

EXTREME RACING

AGA Amigas ■ Black Magic
■ 01302 890000

What Virtual Karting from OTM promised, it looks like *Extreme Racing* from Black Magic is going to deliver.

Here is a pseudo-mode 7 racing game with the pace and conflict of SNES classic *Super Mario Kart*. Whatever you think of the SNES and console-based cartridge software, it still can't be denied that the aforementioned title is one of the best multi-player race games available on the video game market.

Extreme Racing on the Amiga looks set to challenge and usurp that accolade. Catering for up to four players at a time on one Amiga, that number can be doubled when combined with

top left: Players can combine in any numbers using the link.

Above: Four players on one screen all at the same time. Wahey.

another Amiga and a serial link. Top – can't do this with a SNES – stuff.

Unlike *Virtual Karting*, the construction of the courses is such that the player is always competing with one or other of the cars on the track; be they computer controlled or human.

To add to the playability and excitement, weapons and power pick-ups are also made available throughout the race. Clever and

strategic use of the weapons can make the difference between winning and losing.

Furthermore, there are a multitude of camera angles to be played around with which let players adjust the view to their own personal preference.

In all, *Extreme Racing* has all the hallmarks of a classic in the mode of *Super Skidmarks*. While it's not going to be quite as pretty as *Super Mario Kart*, it looks as if it's going to push the little plumber off his gameplaying perch in the playability stakes.

We're really looking forward to the complete game. A linked up challenge with sister magazine *Amiga Power* has already been arranged.

All we need now is a pre-emptive box of Kleenex for their inevitable losers' tears.

Not quite as cute and cuddly as *Super Mario Kart*, *Extreme Racing* promises to be more playable and more fun. Can't wait for the finished version. The preview was a bundle of laughs to play.

Continued overleaf →

GLOOM DELUXE

2Mb, 68020+ Amigas ■ Black Magic ■ 01302 890000

Gloom from Black Magic kicked off the battle to see who could write and execute the best Doom

If you've got a powerful enough Amiga, you'll be able to play *Gloom* in a window.

clone on the Amiga. The original used the, by now familiar, 2*2 pixel mode, which gives everything that 'rough and ready', grungy feel. It played like a fast, frenetic dream (or nightmare, depending on how you looked at the game) and consequently was a resounding success with Amiga owners throughout the world.

This time round, that

Antipodean Sibly chap has gone one better and introduced a far cleaner, more detailed, 1*1 pixel version, called *Gloom Deluxe*, which not only runs on A1200s, but will run on any OCS/ECS machine with at least 2Mb of RAM and a 68020 processor.

We've had a look at a five level demo of the so-called

Deluxe version and can report that, if the same pace and playability is kept up throughout, fans of the original aren't going to be disappointed.

These screenshots have been taken using the 1*1 pixel mode. We're sure you'll agree that it makes the game look better. If not, we'll hang your puppies.

HILLSEA LIDO

All Amigas ■ Vulcan Software ■ 01705 670269

Hillsea Lido is the latest offering from Vulcan Software's highly successful mini-series of Amiga games.

Despite initial reservations, *Hillsea Lido* exhibits all the hallmarks of a cult classic in the making. Heavily influenced by Theme Park, *Hillsea Lido* draws upon the marketing mechanisms of Peter Molyneux's baby.

You're put in charge of 30 metres worth of virgin beach and

promenade. You have a million quid with which to turn it into a raging commercial success. The means to do this are entirely up to you.

Not as visually resplendent as Theme Park, *Hillsea Lido* exhibits its own charm.

The basic strategy revolves around attracting people to your part of the beach, making them stay there, keeping them happy and luring them into spending money on the beach attractions as well as in the promenade shops.

When the money starts to roll

in, the player can buy more beach and promenade and put more shops and rides on the extra real estate.

To help things along – almost like a Sunday night bonus – the beach owner can put on a show on a Sunday night which, if it's been properly advertised, can bring in wads of dosh.

Like Theme Park, the punters

If you're bored or stupid enough, you can even watch the Sunday Show.

The more attractions you have on the beach, the more people you attract.

The bar graphs represent the stock levels in each of the shops.

Again, the game can be optimised for your hardware setup; memory expansions, accelerators and hard drives.

If things go to plan, it will appear in this very magazine next month.

The Nazis never got over losing the Second World War.

As is obvious from this charming picture, the option to switch between meaty and messy modes has been kept in for the Deluxe version.

exhibit their own individual artificial intelligence which lets the player interrogate them at any time so desired.

Throughout the running of the simulation various little dramatic events occur, such as shops running out of stock, litter building up, money collectors being robbed, health inspectors visiting... all

helps keeping the players on their toes.

As the player progresses, there are more variables and items demanding the player's attention. Meanwhile, the little computer people residing in this micro-world seem oblivious to all of the hard work being put in by the player in the background.

Charming and compulsive, *Hillsea Lido* will receive a full review in next month's issue.

Land, shops and beach attractions are up for grabs from here.

When collecting money from shops, your collector can even be robbed.

Emplant can be used with any accelerated Zorro based Amiga. With Macintosh and PC emulation modules, Emplant is the Amiga's only all-in-one emulation solution.

Macintosh® Emulation Module

- A full 'generic' Macintosh with the speed dependent upon your processor.
- An A3000 is equivalent to a MAC IIci. An A4000 is equivalent to a Quadra 900.
- Support for up to 16 colours (non-AGA), 256 colours (AGA) or up to 24 bit colours using third party video boards such as Picasso II, CyberVision, Piccolo SD64, Retina etc.
- Built in intelligent multiple file transfer for transfers between the Amiga and MAC.
- Support for AmigaDOS devices. CD ROM, direct Scanning, MIDI, SyQuest, Printers, Modems etc. Total compatibility through on-board SCSI interface (Option B and Deluxe).
- Full 8-bit stereo sound. Requires Macintosh II/IIx/IIcx/SE30 256K ROMs (not supplied).
- Supports all Floppy formats (Even 800K Mac drives with additional AMIA interface).

e586DX/SX Emulation Module

- MDA, CGA, EGA, VGA, SVGA video modes (AGA is required for VGA/SVGA)
- Sound, Floppy drives, AmigaDOS partitions, Extended Memory, and more!
- Print from Windows or DOS via Amiga parallel port
- Use CD ROM drive with any Amiga sided CD ROM drive
- Will run programs that require greater than a 286 processor
- Comes with both DX (FPU) and SX (no FPU) versions and 486 PC BIOS.

EMPLANT BASIC	£239.95
EMPLANT OPTION A (APPLETALK/SERIAL)	£279.95

e586DX/SX PC MODULE (Now includes BIOS)	£109.95
PC BIOS (AMIBIOS) for e586DX sold alone	£ 10.00
AMIA (800K MAC DRIVE ADAPTER) + MAC DRIVE	£ 89.95

MainActor Broadcast

MainActor Broadcast is a completely new Animation program for any Amiga with OS2.04 or better.

- Over 20 Load/Save modules (AVI, BMP, DL, FLI, FLC, GIF, IFF, IFF-Anim3/5/7/8/J, JPEG, PCX, QuickTime...) with AVI, QuickTime and JPEG support up to 24-bit.
- Index file for faster reloading of animations and playback from Hard Drive.
- Support for any graphics card for 24-bit as well as standard Amiga screenmodes.
- Effects modules to apply effects directly into the animation (Text, Scroll, Scale, Rotate...)
- 19 Sound modules for sound/music playback incl. compressed (OctaMed, SM3) in 8 and 16 voices
- Joining, Convert, Split animations and autoswitch to optimal colour depth.
- AREXX-Port for external control, and MacroSystems multiple library support.

MAINACTOR BROADCAST	£179.95
MAINACTOR PROFESSIONAL	£ 49.95

Liana

Liana is the ideal solution for a quick, easy yet efficient connection between any two Amiga's. Simply plug the special cable into the parallel port and install the Envoy software. The software offers FileSystem import and export, network printing and multi-user support. The Liana network driver is completely SANA-II compatible.

LIANA	£ 59.95
-------	---------

Ariadne

Ariadne offers a simple but effective Network solution for any Zorro based Amiga.

- Two extra parallel ports.
- The industry standard software solution Envoy.
- 10Base-2 (Thin ethernet, coax cable) and 10Base-T (Twisted pair, western jacket)
- Socket for a boot ROM and 32Kb CPU cache.
- SANA-II compatible driver for ethernet and parallel port.

ARIADNE	£219.95
---------	---------

Picasso II Bundles

PICASSO II is the leading graphics card for any Zorro based Amiga. The Workbench emulation offers 256 colours, even on non-AGA machines (Requires OS3.1) at resolutions up to 1600x1280. Choose colour depths including HiColour (16 bit) and True Colour (24 bit). No "Chip RAM limitations" and an in-built Amiga video pass-through makes Picasso II the best value graphics card around!

PhotoGenics V1.2

To Enhance your choices, we have a variety of excellent bundles, offering fantastic value!

Picasso II Standard	Includes TVPaint Junior, MainActor, Viewers etc.	
1Mb		£219.95
2Mb		£249.95
Picasso II + TVPaint 2.0	As the Standard pack but with TVPaint 2.0.	
1Mb		£369.95
2Mb		£399.95
Picasso II Creativity	As the Standard pack but with PhotoGenics 2.1	
2Mb		£289.95
Picasso II Creativity Plus	As Creativity pack but includes full CyberGraphics	
2Mb		£309.95
Picasso II MultiMedia	As the Standard pack but with Pablo Video Encoder and MainActor Professional.	
2Mb		£349.95
Picasso II MultiMedia Plus	As the MultiMedia pack but with MainActorBroadcast.	
2Mb		£529.95
CyberGraphX Software	Full release for all graphics boards	£ 34.95

Now available for ANY Amiga! The full Escom licensed OS3.1 packs will bring your Amiga up to the very latest operating system. OS3.1 is more efficient, offers more features and is becoming necessary for many high end applications.

OS3.1 A500/500/1500/2000	£89.95
OS3.1 A1200	£99.95
OS3.1 A3000	£99.95
OS3.1 A4000	£99.95

AmiTCP

AmiTCP is the most popular TCP/IP implementation for the Amiga.

- Connect your Amiga to heterogeneous networks and the Internet.
- Supports Network-File-System (NFS) as a client.
- Uses SANA-II Interface.
- Optimised version for 68020+ CPU included.
- Full English manual.
- Additional applications: FTP, Telnet, rsh etc.

AmiTCP	£ 69.95
--------	---------

ATAPI + CDFS

The new ATAPI/Cache CDFS package offers excellent facilities for your A4000, A1200 or A600

- Use an ATAPI CD-ROM drive with the A4000 A1200 or A600 IDE controller
- The Atapi device is able to support up to 4 units with the A4000 and A1200 (not A600) With an additional special cable. This may be up to two hard-disks or any number of CD-Roms. This effectively adds a "second" fully operational IDE port to the system.
- CacheCDFS, excellent CDFISystem software.
- PlayCD (audio) and CD32-Emulator.

ATAPI + Cache CDFS + CD32	£ 49.95
ATAPI Software + 4-Way Cable A4000	£ 69.95
ATAPI Software + 4-Way Cable A1200	£ 74.95

Amiga Computers

Pablo Video Encoder

PABLO is the Video Encoder option for Picasso II, expanding it with two additional video ports, one standard Composite Sync Signal, and one S-VHS (Y-C) compatible port. All PAL compatible video devices can be plugged into Pablo, such as a colour TV or a video recorder.

PABLO VIDEO ENCODER	£119.95
---------------------	---------

LIGHT ROM 3 is a three CD pack offering tremendous quality and value to the user

CD ROM 1

Over 4500 Lightwave objects divided into categories including Anatomy, Aviation, Botany, Buildings, Furniture, FX, Holidays, Household, Logos, Music, Ships, Space, Sports, Tools and Vehicles. Showcase directory features contributions from Lightwave artists around the world. Every Lightwave object is represented in easy preview thumbnail renderings (IFF, TARGA & JPEG).

CD ROM 2

Collection of 3D objects in other formats including Imagine (175 Mb), 3D Studio (110 Mb) and Sculpt 3D (30 Mb) Textures in JPEG format complete with thumbnails. PD graphic programs and demos for PC and Amiga. Collection of 3D landscapes in Lightwave, 3D studio and Imagine formats. Video Toaster directory with wipes and CG fonts.

CD ROM 3

Bonus "DEM ROM" includes over 1000 DEMs (Digital Elevation Maps) for use with World Construction Set, VistaPro and Scenery Animator on any platform Use DEM ROM (along with any of these programs) to create realistic backgrounds or flights through your favourite scenery to incorporate into Lightwave or other 3D programs as background sequences. All DEMs include thumbnail renderings of their their topographical maps.

LIGHT ROM 3	£39.95
-------------	--------

World Construction Set

World Construction Set is a 3-D terrain modelling and animation program that offers unlimited flexibility and control. WCS provides a wealth of solutions, whether you are creating for video, print media, commercial or scientific applications, or just for fun.

Key-framed animation, colour-mapping, unlimited scene size, detailed ecosystem control, interactive GUI and many other features

WCS's friendly design makes it easy to create scenes with just the view you want. You can work in multiple windows to lay out motion paths, adjust colours and modify ecosystems all at the same time. Camera View shows a wire frame rendering of the scene of any animation frame. Solid shaded, ecosystem, diagnostic and animation previews can also be generated. Camera position and over 20 other attributes can be set interactively. Haze, horizon, view arc, vertical exaggeration and sun position are just a few of them.

WCS requires OS 2.04 or greater, 4 Mb RAM (8 Mb recommended). Both 68030 and '040 optimised versions are supplied.

WORLD CONSTRUCTION SET	£119.95
------------------------	---------

Doubler 4000/40

The Doubler 4000 50 MHz 68040 accelerator delivers across-the-board speed increases for all applications and system functions, translating into a significant productivity gain. This powerful "plug and play" accelerator is 100% hardware and software compatible, since it still uses a Motorola 68040 processor. The Doubler 4000 includes an on-chip math co-processor, and will dramatically speed up any application - such as rendering - that depends on calculations. Sysinfo reports and increase from 18.76 MIPS of the standard A4000 to 37.72 MIPS with the Doubler installed! An integral cooling system ensures that the Doubler 4000 runs cooler and more reliably at 50 MHz than the original processor.

DOUBLER 4000 50MHz 040	£299.95

Breathless

EXCLUSIVE!

If the Amiga was compared to King Arthur, *Breathless* would be Galahad – the worthiest and most able champion in the land. **Steve McGill** can't recommend it enough.

Wow, despite being an assertion verging on understatement, it seems ironically appropriate to proclaim that *Breathless* is going to be as significant and as important to the Amiga of the Nineties as the Juggler was to the Amiga of the Eighties. If you're new to the Amiga or don't know what I'm referring to, here's a brief explanation:

The Juggler was a raytraced animation of a rotund figure juggling some light-sourced balls which reflected the surrounding environment. Nothing like it had ever been seen before on a home computer.

The Juggler single-handedly, so to speak, turned on thousands of adventurously curious types and tuned them in to the arcane lore and heady world of the Amiga. Consequently, the machine sold in droves and went on to become the resounding success that it is today.

Continued overleaf →

Breathless EXCLUSIVE!

As can be seen from the helpful map, some of the levels are huge.

When faced with opposition as strong as this, it's sometimes best to run.

Look at the perspective on this corridor. More realistic than real, that's what it is.

◀ *Breathless*, meanwhile, has the potential locked within its exquisitely crafted code to repeat history. But rather than selling Amigas – which it will as a matter of course – *Breathless* is more likely to sell accelerator cards by the bucket load. For it is a walking, talking, singing and dancing tribute to the potential and power that lies within the heart of an accelerated, AGA chipset Amiga.

In effect, it's probably the most opportune and timely advert for the potential of our underrated vanilla chum ever seen. At a stroke it casts aside the imagined inferiority complex the Amiga's been suffering from for the past year or so concerning the higher profile PC and Mac platforms.

What *Doom* does on the PC using brute processing power, *Breathless* does on the Amiga using optimised elegance. Except, *Breathless* does it better.

Elegance is the keyword here. Elegance and design and Amiga friendliness. The detail and size of the playing screen can be optimised to the processor used and the memory available. You'll always be able to find

a detail/window size versus running speed compromise without affecting the gameplay.

The 2*2 pixel mode resembles the look of *Alien Breed 3D* and, just like *Breed 3D*, *Breathless* is great to play in this screen mode. But, if you've got an accelerator installed, the difference between the 2*2 and 1*1 mode resembles the difference

between squinting myopia and pin sharp focus.

Making the switch has a profound effect. It's like taking the jump from a cartoon world into temporal, in yer face, reality. And, if you like recreationally tinkering with your perception, you'll be mightily impressed verging on 'Breathless' by the difference the change makes.

Breathless tunes into, tickles, thrills, titillates and teases your brain's inbuilt reality construct; a construct that's been created, shaped and solidified since you first learned to grasp an object in front of you.

When the hand/eye coordination adjustment to *Breathless* is made, you'll find yourself doing ridiculous things, like trying to peer round corners, squinting to see what's up

ahead in a poorly lit room, become illogically pensive when faced with a dark corridor. Such is the power of the game to affect you on a subliminal and direct level.

It's also why the game's so compulsive. Despite following a formulaic game plot of finding keys to open doors, wasting nasties who get in your way, and picking up health, energy and shield icons, the environment and creatures change enough to keep you permanently interested and curious to see what's up ahead.

Furthering the sense that you're treading in a parallel world consisting of its own laws of physics reality and danger is the clever use of lighting:

Flickering lights on some levels add to the spooky unsettling effect of seeing a behemoth shambling toward you; gun fire lights up the immediate surroundings; light floods into dark rooms when you open doors. Terrific stuff.

The use of lighting might sound cosmetic, but internally your brain's registering the light levels on a subliminal level and is creating an

■ It is a tribute to the power that lies within the heart of an accelerated, AGA Amiga.

Pools of acid, pools of lava and weapon damaged textures add to the atmosphere.

The flame thrower is graphically pleasing as well as being highly effective.

UP, DOWN AND IN MY LADY'S CHAMBER

All of these pics are taken from the same position...

...to the left we're looking down. Ahead here...

...and this time we're enjoying the night sky.

Aside from the fantastic graphics, the one feature that puts *Breathless* streets ahead of other Amiga *Doom* clones is the ability to look up and down within the 3D environment. Executed in increments, its use is essential to survival.

Health and energy kits are placed in optimum positions. Just as you're close to dying, they appear like visions of holiness from on high.

immersive parallel cognitive gestalt that not only appeals to the player on a mechanical level, but interfaces directly with their emotional responses. Scary, though not as scary as some of the creatures themselves.

The creatures found within the confines of the *Breathless Arenas* are assigned varying artificial intelligence levels. Some will stay within a certain zone. Others attack you on sight. Yet others try to shoot you while dodging your return fire.

At first it makes some of them look a bit stupid; all they seem to do is run left and right. But when you think about what you're doing – dodging left and right to avoid incoming fire – it makes perfect sense for them to do likewise. It makes it harder for them to be hit and killed.

As for their look. They look the biz. Some are guaranteed to give kids nightmares. Especially the shambling

simian monstrosity and the Aliens. They frightened me as they drained my shields and health at an alarming rate. It made it all the more gratifying when I put them out of their evil misery.

Even the structure of the game makes sense. There are four worlds consisting of five arenas to each world. You take on an arena at a time.

Each arena increases in size and, unlike *Breed 3D*, there's an auto-mapping display to hand for navigation purposes; if you get lost, the tedium of travelling over old ground kept to a minimum.

The map even highlights the various terminals dotted around the arena. Which, as you might have

Continued overleaf →

A GALLERY OF ROGUES

Aliens are not only tough to kill, they're also very fast and very aggressive. Hard to run away from.

Difficult to spot and harder to kill, you need some serious weaponry to take these guys on.

A slow but persistent Rambler, this armoured Alien is a real boss of a monster. He just doesn't give up.

You take the high road and I'll take the low road and I'll be in Scotland before you.

When killed, this bodyless head falls into a horrible pile of mush. If only we had smell-o-vision.

If you look closely this chap's head is the same as the head on the left. Efficient use of graphics.

Release date

Out now

Graphics 9 out of 10

Take a look at the screenshots. Exquisitely beautiful. You should see it move.

Sound 9 out of 10

Perfect for the style of game. Even the in-game music enhances the excitement.

Addiction 9 out of 10

Monsters to see. Places to see. Exits to find. I don't want to leave this world.

Playability 9 out of 10

Impeccable difficulty curve. Makes you work hard without ever feeling it's impossible.

Overall verdict

Breathless has boldly taken the Amiga where no Amiga has gone before.

95%

Look at the lighting in this room. When you're playing and everything's moving, it's great.

← guessed, is my cue to tell you about the terminals. They're where you spend your hard-earned credits. There are new weapons on sale along with upgrades, keys, energy, health and shields. Judicious use of the terminals can increase the chance of survival. Save your credits and spend them wisely.

Phew. We've almost made it to the exit in one piece. If you haven't sussed by now that *Breathless* has impressed me more than any Amiga game I've ever played, let me spell it out. *Breathless* is the most impressive Amiga game I've ever played on the Amiga. Throw a book of superlatives at it and you'd still run out of praise for the game.

It plays sublimely. It demands discipline and skillful procedure from the player to make headway. It looks fantastic. It's exciting. It's scary. It's fun. It's a work of interactive art. It's brilliant.

At last the Amiga has broken through the 3D Doom engine barrier and proved itself capable of matching and beating machines costing multiples of its price. Things can only improve from here on in.

Its arrival couldn't have been more timely. Imagine you were trapped in a box canyon surrounded

Fog lighting effects are atmospheric and add to the tension.

THE BEST VERSUS THE REST

In order to give sceptics a better idea of how good *Breathless* looks in comparison to other first perspective 3D engines, we decided to put the most influential ones on other more expensive platforms.

BREATHLESS

This is *Breathless* running on a 1200 with a Blizzard 030 card installed.

Truly *Breathless* is one in the eye to Doom clones on other platforms.

DOOM

The original *Doom* running on an eight Megabyte PC. After the eight hours...

...it actually takes to get the game to install, it still doesn't look as good.

MARATHON

To run *Marathon* with this number of colours and size of screen requires...

...a Power Mac costing in excess of £1,500. Made me feel 'Breathless'.

by hostile Indians. You'd just fired your last bullet and the Indians were coming to get you.

Just as you were about to throw the gun at the first Indian to appear you heard the bugle of the Seventh cavalry in the distance and the Indians scattered like the wind. *Breathless* is that bugle call.

There have been so many detractors of the Amiga around. So

many people willing to pour scorn and derision on the machine and its market that at times it felt as if we were surrounded by hostile Indians.

If enough people buy *Breathless* and make the necessary upgrade to drive it at anything like its peak performance, other developers are going to want a piece of the action and make the Indians go away.

So go on. Do yourself a favour. Do your Amiga a favour. Do us a favour. Do the Amiga market a favour. Buy *Breathless*.

If the Amiga was compared to King Arthur, *Breathless* would be Galahad – the worthiest and most able champion in the land. It can't be recommended enough.

AF

Careful use of the terminals makes the difference between death and survival.

There's something worryingly satisfying about seeing an enemy lying dead in the corner.

THE WORLD'S FASTEST A1200 '030 ACCELERATOR!

What the Magazines think...

NEW 68060 ACCELERATORS FOR THE AMIGA A1200, A1500 and A2000 RANGES

If you'd like to know how to make YOUR Amiga A1200, A1500 or A2000 as fast as any Amiga can be... ask for our free brochure which shows you how!

Blizzard products have always been at the forefront of the Amiga accelerator market and we were the first to launch 68060 boards with the amazing performance they bring. Since that launch, there have been shortages of 68060 Motorola CPUs and production output has fluctuated. Although supplies of these chips were expected to be fully on line by now, Motorola cannot meet the demand. We are assured however that by the early part of 1996 Motorola will be in a position to fulfil the market's needs and hence, Blizzard product delays (which have been our control) should disappear. Until then you may well ask...

Should I be tempted to buy on '040 instead?

Well, when the Blizzard '060s can be Two or Three times as fast yet cost as little as 25% more, why buy an '040 which offers a far lower price to performance ratio? When we considered the possibility of producing an "interim '040", we decided it was not a product worthy of development. The facts are simple, if YOU want the FASTEST Amiga, a 68060 is the ONLY way. Maybe you should think about reserving a Blizzard 1260 or 2060 now - stocks are bound to be limited when the mighty 68060 returns! A small wait now, but an '040 will always keep your Amiga waiting longer!

NEW... 1260	NEW... 2060

PRICES: Please remember to confirm prices in case you are looking at an 'old' magazine. Prices can change (up or down) before the magazine's cover month has passed. Please confirm before sending orders by post.

DELIVERY: We ship promptly and offer delivery of all orders throughout Mainland UK & most products overseas. If your order is urgent we have priority despatch options with express delivery available.

EXPORT: Most items are available Worldwide, and at TAX FREE PRICES to non EC residents & overseas UK Armed Forces Personnel (with CO's documents). Please call us for confirmation of prices and carriage charges.

In prehistoric times multiballs used the hi-res mode.

The waterfall is a neat feature. Doesn't do much, but I like it and you sometimes get frogs in there.

The Present table's footie feature is curious. A game of one ball, no halves and a flashy scoreboard.

Prelude is the exact opposite in that it plays like a dream, but looks less than glitzy.

Normally, you'd be worried if your balls turned yellow and started grinning at you, but not in this case...

Pinball

Is this the best pinball game on the Amiga?

New team of coders, Effigy, get right back to basics with this addictive pinball escapade.

Playability is king at Effigy's towers and looks, as I often remind Nick Veitch, aren't everything.

If, like me, you found the much-hyped Pinball Dreams, Fantasies and Mania good-looking, but ultimately drab, you'll love *Prelude* - it's the exact opposite in that it plays like a dream, but unfortunately looks less than glitzy.

So, you've got three tables - Past, Present and Future - but really you've only got two, because this otherwise top game loses the plot completely with the Future table, which is poorer than a very poor thing. In fact, if this is what the future is really like, I'm staying put. Let's take a look at each of those tables, shall we?

Table One

The Past is ages ago. Not yesterday or the last century, but back in some prehistoric time riddled with dinosaurs and, strangely, rabbits and rats. Allegedly, you can

complete this table by transporting things to the correct time zone. I couldn't, although Veitch claims to have had some success while he was idling away a few hours, but I had immense fun trying and, ahem, got two scores on the all-time top five for my troubles.

This is the best of the three tables. It's all very straightforward; there are a few neat, yet simple touches, like the side lane waterfall, but it's difficult. Take, for example, the bonus multiplier which involves slinging the ball into the dinosaur jaws on the right of the table.

The best way to do this is as a backhand off the right flipper. The shot is a tricky little blighter, but once mastered, completing it is almost as satisfying as scoring at the far post with a diving header at Sensi.

Actually, I can only presume this to be the case because, despite devoting a fair part of my adult life to executing such a goal, I have yet to achieve it.

Other neat features include the multiball (achieved by completing a series

Conclusive proof that when they weren't painting their caves at all, prehistoric people played pinball.

Top multiball action on the Present table; it's all a test of nerve, dexterity and, er, luck.

Whacking the ball into the jaws on the Past table involves a bit of backhand trickery with the right flipper.

The Present is a good place to be. Perhaps not as pleasing as the Past, but much better than the Future.

Prelude

Richard Jones thinks it might be...

of hellishly difficult shots past the top-left flipper) splatting the rat when the little fella pokes his head up, and the rubber ball. The whole thing is fast, yet simple, and extremely addictive.

Table Two

The Present is the most complicated of the tables with loads of ramps, shoots and flashy things, including a mini football game, a curious car parking facility and a rather fetching Smiley ball feature.

Like the Past, it's fairly easy keeping the ball in play, but hitting the scoring shots takes some application and involves the full repertoire of backhands, switching the ball across the flippers and, of course, luck.

The shot up the ramp to the big circular thing in the middle that gets you your multiball and the Smiley ball is particularly tricky. Took me ages to get it right and, naturally, I couldn't do it again when the time came to do the grabs. The mini football bit is excellent in a bizarre and pleasingly pointless kind of way.

The Present is a good place to be.

Table Three

The Future is the table that lets the whole show down. **Stop Press:** Due to Effigy operating through mail order, they released it in an unfinished state with the promise of an upgrade as and when it was finished. We'll get Rich to look at it again next month.

The End Bit

Hurrah for Effigy. If it wasn't for the dreadful Future table, *Prelude* would have got a Format Gold.

But let's concentrate on the good things. After a glut of games that tried to emulate pinball tables, we now have one that involves a bit of lateral thinking.

It takes the basic premise of hitting a ball with flippers to create a game that requires skill and reactions and has a fairly steep learning curve.

It doesn't matter whether it's a pinball game, a footie game a beat-'em-up, or a flight sim, but any game that has those qualities is going to be addictive and, let's face it people, it's good to get hooked. So, do it!

Release date

Out now

Graphics

7 out of 10

Hardly luxurious, but kinda fetching.

Sound

8 out of 10

Cartoon-like sounds conducive to the action.

Addiction

10 out of 10

Top-quality hook factor. You'll be gagging for more flipper action.

Playability

9 out of 10

Plays like a dream. Simple but alarmingly effective.

Overall verdict

The third table is awful, but Past and Present are two of the best pinball adventures on the Amiga. It's only that third table that prevents *Prelude* from striking Gold. Let's hope the new upgrade has picked up on this.

Aminet 6 CD175 (over 100) with a follow on disc to help you find the best software for your needs

Aminet 7 CD184 (over 180) with a follow on disc to help you find the best software for your needs

Since the release of **Aminet 6** more than 50,000 of new software has appeared. The current edition has a special focus on graphics, 14 CDROMs and 14 CDROMs

And, many more things are
a beautiful, beautiful world

These manuals make tracing off bugs in Amiga code much easier. Making Goldilocks much more useful, you can explore much of the CD, including reading the documentation, running installed scripts, running programs, viewing pictures, and even editing files. The manuals are also installed, so you can view them without having AmigaGuide or touching a TL window. There are also other changes to help you find what is documented in the top level README, guide file. You should now run the INSTALL scripts to install the CD.

Since the INSTALL scripts will remove any previous changes to the CD, you will need to re-run the install script if you make.

Goldilocks Volume 3

This manual contains information on special features, including the Friends, and makes a good reference manual for the Amiga. It also contains information on the various features of the Amiga, and is a good reference manual for the Amiga.

The **Goldilocks** TL-Menu window provides Amiga users with a list of the various features of the Amiga.

ZEEWOLF

ZEEWOLFIER

In AP57 we bear witness to the hot fury unleashed upon SINISTER EVIL MEGA-GLOBAL CORPORATIONS by helicopter vigilante *Zeewolf 2*. Admire the intricate prose of our shatteringly accurate review, then play the coverdisk demo. And if that doesn't appeal to you, you're a cretin.

AMIGA 57
POWER
ON SALE NOW

Zeewolf 2

Zeewolf 2, as you might already have guessed, is the sequel to the first *Zeewolf*. Is it moving forwards or backwards? asks **Steve McGill**.

Zeewolf was a mission-based, arcade wargame that not only improved on, but bettered David Braben's seminal classic, *Virus*. *Zeewolf* put you in charge of a deadly blue attack chopper and offered a choice of three weapon systems with which to hand out justice to its enemies. We loved it at *Amiga Format* and awarded it a *Format Gold* in issue 66.

Zeewolf 2, though, is a sequel. To paraphrase a fellow journo in the games world, "if you ain't going forwards, you're going backwards".

So the big question that has to be asked is whether or not *Zeewolf 2: Wild Justice* is going forwards. The answer is a simple and resounding yes and no; both at the same time and with equal conviction.

The biggest improvements

lie in the optimisation of the code. The 3D patchwork terrain moves faster and looks better; there are four world types as well – grasslands, desert, arctic, and toxic wasteland.

These worlds are further populated with all manners of buildings, machinery and military paraphernalia.

Combined with the new look of the different worlds, they succeed in fleshing out

Enemy helicopters make more of an appearance in the sequel. Exciting aerial duels are the test of a true pilot.

Rather than stick with Destroyers and Frigates, Binary Asylum have opted to put in more boats and ships. From left to right they are: enemy Destroyer, an enemy Tanker, and a double-gunned son of a bitch, difficult to kill, Destroyer-based Frigate.

There are numerous different buildings and structures scattered throughout the Zeewolf world. They help maintain the belief that the world is self contained and in need of justice.

Most of the buildings in Zeewolf can be destroyed and left in ruins. It helps if people get in touch with their vandalistic feelings and express themselves.

In the Parkhead area of Glasgow, Celtic supporters have been known to decorate their multi-stories in this manner. Good job the Zeewolf is blue.

what was basically a bare bones collection of assorted objects. Consequently, the new additions add to the atmosphere and help the gamer suspend their disbelief more readily.

Vastly improving on the original and drawing heavily on the influence of Jungle Strike is the inclusion of different vehicle types which the Zeewolf pilot can access by linking up with a remote link Camel (all of Zeewolf's vehicles are named after various animals). We've highlighted the various vehicles in the box below.

Pick up the Buffalo. Fly it to where you want to go. Then seek out the remote link Camel.

To complete this mission, you have to land commandos on the roof. Tricky and unsafe.

In that other great chopper game, Jungle Strike, the player was forced to use the ground and water vehicles in certain instances, due to the introduction of some crude mechanisms preventing them from completing missions in an alternative manner; for example, the hovercraft had to be used because the attack chopper couldn't fly past a bridge but the hovercraft could sail underneath it.

Zeewolf 2, thanks to its open-ended architecture offering complete freedom of movement, isn't quite so draconian. At least not at first. On mission 11, when the player is first introduced to the remote link boat, the mission can easily be completed without even thinking about the boat.

Come mission 19, though, the player is almost forced to use the boat through a lack of refuelling Camels. You're left with virtually no other option but use the remote link boat. It would have been nicer to see the player having to resort to the use of the remote link vehicles through dastardly mission design.

After all, SAM and AAA sites track ground vehicles but don't actually shoot at them. Protecting a mission objective with heavy batteries of anti-aircraft missiles backed up with three or four Cobras (a mobile radar vehicle which homes missiles in on the Zeewolf) would ensure that all but the most kamikaze of pilots would resort to the remote link ground vehicles on offer.

Still, the new vehicles are a pleasure to use and spice up the flavour of Zeewolf 2 no end. The boat is a favourite of everyone in the office.

You can fire torpedoes, homing missiles and a straight cannon. It's the same with the other remote vehicles, each one has its own particular 'big' weapon. Top stuff.

I LIKE DRIVING IN MY...

To access the remote link vehicles, first you land beside a specially adapted remote link Camel, like this one here.

Tank: The Buffalo has a fantastically high impact shell which wastes just about anything with one shot.

If desired, you can fly around in a Kestrel VTOL craft. It's a lot of fun and feels completely different from the Zeewolf.

You can fly a Pelican transport helicopter, but it isn't as much fun as flying this enemy chopper to deliver the bomb.

Of all the vehicles, the boat is our personal favourite. You can fire homing missiles, torpedoes and a cannon.

Carriers are still handy and useful for dumping off hostages and refuelling.

Some missions demand strategic and tactical use of the hostages.

Enemy oil rigs can be shot up to your hearts' delight.

A criticism of the original was that some missions were minus hostages. No more.

Surprisingly, though, the issue of controlling the Zeewolf hasn't been dealt with in a satisfactory manner. Mouse control is still as slick, intuitive and difficult to learn as ever. It truly is worth persevering with.

Many people can't get to grips with the mouse and thus opt to use the joystick. The joystick hasn't been suitably upgraded to give the player the sense of utter control that's needed; you can't use the throttle with the joystick which makes it a very poor relative of mouse control. There isn't even an option to use a two-button joystick or a CD³² pad.

This is an unforgivable exclusion. It shuts off too many people from the real joy of playing the game. And Zeewolf truly is an event waiting to happen.

So, we've reached this far and now the time's arrived to ask if Zeewolf has gone forward. The answer is a straight yes and no.

Yes, the inclusion of remote vehicles is a step in the right direction. And no, the mission structure isn't different enough to protect the game from the claim that it's more of the same – it would have been nice to see a structure similar to Jonathan Griffith's Conqueror. Overall, though, the game offers just enough to have edged forward in the evolution stakes.

I've still got no qualms about thoroughly recommending Zeewolf 2. Playing the sequel is like visiting an old and trusted friend who's suddenly taken to wearing trendy clothes and acting hip.

Despite all the hype about 'next generation' consoles, a game's still to appear that offers

next generation gameplay.

Zeewolf 2 is a next generation game awaiting recognition. Grab a piece of the future. Buy Zeewolf 2 – it's terrific.

Introducing the Digita[®] family

New! TurboCalc 3.5

“I now understand why this remarkable software is so popular in Germany. Thank goodness Digita worked with TurboCalc's German creators to develop this English version. In a nutshell, a fast spreadsheet, at a friendly price and with a proven track record!”

Spreadsheets can be used for many forms of financial planning. Using TurboCalc, you can calculate and recalculate entire spreadsheets in seconds. And then, by selecting from a range of 2D or 3D styles, view your data as charts.

- Award-winning spreadsheet with over 52,000 users in Germany!
- Unbeatable combination of power and speed.
- Ideal for charting, for budgeting, for cash flows and financial analysis.
- Extensive charting options, including 3D and animated graphs which update in real-time.
- Drag and drop editing.
- Multiple undo and redo.
- Share information with other spreadsheets, like ProCalc, Microsoft Excel or Lotus 1-2-3, as well as Datastore, Money Matters, Organiser and Wordworth.
- On-line AmigaGuide help whenever you need, so you can learn TurboCalc as you use it.
- Over 100 built-in mathematical and financial functions.
- Extensive ARexx and macro support.
- Low price upgrade! Call for details.
- Requires Workbench 1.3 or above, floppy or hard disk, 1MB RAM.

£49.99

Add £3 postage and packaging

New! Personal Paint 6.4

“This is the only choice, the only Amiga paint program that does everything—painting, image processing, animation and 24-bit printing—there is no other choice for a computer artist!”

Painting has never been so liberated! Personal Paint's unique virtual memory facility uses free disk space to supplement RAM, and in doing so, relieves memory constraints.

And with its unequalled support for third party graphics cards, you can create fabulous images no matter what Amiga you use.

- Stunning effects like emboss, water-colours, transparencies and stereograms.
- Full range of drawing and colouring tools, with the ability to store up to 9 brushes.
- Animation storyboard.
- Virtual memory, uses free disk space to supplement RAM.
- Wide compatibility with third party graphics cards.
- Import and export IFF, PCX, PNG.
- Multiple undo and redo.
- Built-in screen grabber.
- Low price upgrade! Call for details.
- Requires Workbench 2 or above, floppy or hard disk, 1MB RAM.

£49.99

Add £3 postage and packaging

New! Datastore 2

“Friendly. That's how I'd sum up

Datastore. There are so many helpful features, like DigiSense for example—it knows what I want to type and helps me type it! Time-saving features like that make all the difference.”

Datastore makes storing information simple. Ready-made EasyStart™ templates means that you don't have to design your own database layouts. And, the wide range of automated data entry facilities ensures that you type as little as possible.

With Datastore, storing information has never been this easy.

- EasyStart™ Templates include: Address Book, Club Membership, Gardener's Guide, Home Insurance Inventory, Recipes, Video Vault and more.
- DigiSense™ technology, like Auto Date™ which senses the date you want and helps you type it.
- List view lets you see multiple records on-screen.

- Quickly and simply print labels (using Wordworth).
- On-line AmigaGuide help whenever you need.
- Share information with Organiser, Personal Paint, TurboCalc and Wordworth.
- Low price upgrade! Call for details.
- Requires Workbench 2 or above, floppy or hard disk, 1MB RAM.

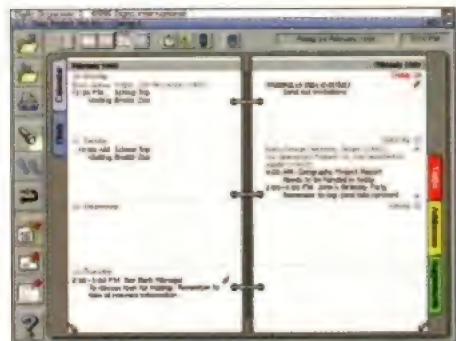

£49.99

Add £3 postage and packaging

New! **Organiser 2**

“I wished I'd bought the Digita Organiser earlier. Imagine, an organiser which looks and works just like the real thing! Now, I never forget birthdays or bills, and I really plan my time effectively. I've learnt a lot too with the Diary Themes and Supplements.”

The Digita Organiser features built-in intelligence that we call DigiSense. Like Auto Date for example, which senses the date you want and helps you type it, and Auto Start™ which automatically starts other programs when you wish.

- Easy-to-use personal organiser display with animated pages containing: Calendar, Diary, Task Lists, Address Book, Supplements.
- Daily Fortune Cookies (operating tips, proverbs, anecdotes and jokes).
- Prints pages for Day-Timer, Filofax, Rolodex, Time Manager.
- Mailmerge with Wordworth to create personalised form letters.
- Manual and automatic linking of related items.
- On-line AmigaGuide help whenever you need, so you can learn Organiser as you use it.
- Share information with Datastore and Wordworth.
- Low price upgrade! Call for details.
- Requires Workbench 2 or above, floppy or hard disk, 1MB RAM.

Organiser 96 Plus Pack

Diary Themes:

Astronomy, Born On This Day, Celebrity Birthdays, Died On This Day, Disasters, Discoveries, Famous Battles, Firsts, Historical Days, Sporting Events, Trivia, 9 Religious Calendars, and more.

Supplements:

Animals, Art, Astrology, Astronomy, Award Winners, Born On This Day, Computers, Culture Events, Died On This Day, Disasters, Discoveries, Famous Battles, Firsts, Gardening, Health, History, Home Hints, Hotels, Internet, Measurement Units, Movie Classics, Music Milestones, National Country Days, Olympics (past and Atlanta 96), Our Planet, Recipes, Registered Charities, Religions, Restaurants, Sport, Telephone Dialling Codes, Travelling, Radio Stations, Social Season Events, Theatre, Telephone Numbers, Useful Addresses, Wine Guide and more.

£49.99

Add £3 postage and packaging

New! **Money Matters 4**

“I dreaded working out my finances at the end of the month. I always seemed to end up owing more than I had left over. In fact, my finances were a bit of a muddle and a lot of hassle.

But not anymore, now that I use Money Matters. I know exactly what I owe, I am able to make sound financial decisions and plan for the future. Best of all, the savings in bank and credit card charges covered the cost of Money Matters in just a few months!”

Use the power of your Amiga to do the work for you! Instantly see what you spend the most on, how this compares to last month, last year, or to your budget—it's effortless!

- See your whole financial picture in one go.
- Easily reconcile standing orders and direct debits with your bank statement (and receive warnings if bank charges are likely!).
- Now includes Human Interface Protocol™ v2, which combines Workbench look and feel with the new super-intuitive HIP™ style.
- Share information with Datastore, TurboCalc and Wordworth.
- On-line AmigaGuide help whenever you need.
- Optional business-style reports and VAT handling for small business, clubs and charities.
- Low price upgrade! Call for details.
- Requires Workbench 2 or above, floppy or hard disk, 1MB RAM.

£49.99

Add £3 postage and packaging

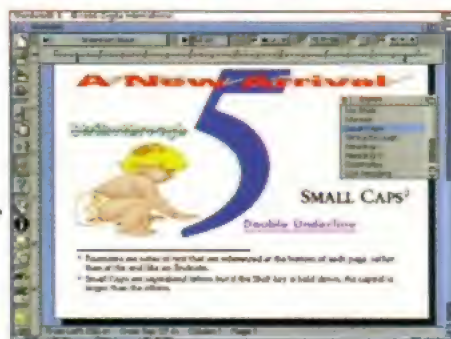

Wordworth News—the new arrival

“I have made some very nerve wracking decisions in my lifetime—joining Her Majesties Forces—

Parachuting—volunteering for near impossible things—but one of the best decisions I have ever made was to buy Wordworth!”

When Amiga Technologies wanted the best word processor, it demanded Digita Wordworth—the best-selling Amiga word processor in the world. Wordworth 4SE, created in English, German, French and Italian, is now included with every Amiga. So, then, the world's most popular word processor becomes even more popular!

Existing Wordworth users can now look forward to Wordworth 5, and, provided you're registered, you'll receive full upgrade details in November. New features include ARexx, Fast Format,™ FontEffects,™ footnotes, style sheets and much more. Best of all, the upgrade costs just £29.99!

This game has passed the stringent test of being liked by **David Taylor's** games-hating girlfriend, so it's as addictive as ever.

Worms CD32

The Weather man gets ready to express his anti-royalist feelings, fuelled mostly by the computer's tendency to cheat.

The question that remains to be answered is: What does the CD32 version offer that the disk version doesn't? Not a great deal, unfortunately.

When you boot the disc, you get a couple of the rendered animations of worms gearing up (taken, I assume, from the PC version), which you may have seen on TV. These animations have been reduced to quarter screen CDXL files and have suffered a little bit in the process. Still, they make a nice intro, even if you only want to watch it once or twice.

The game itself is identical to the floppy version, even down to the way it loads (although it is quicker from CD). It does take advantage of the AGA chipset to "enhance the presentation of the game" and 2Mb memory to load in additional samples, as does the disk version.

In case you missed last month's review of the floppy version, here's a quick recap of the gameplay. You control a team of worms battling against other teams, controlled either by friends or the computer. The game is played in turns, where you get to select an action (usually a violent one) which will lead to the death of other players' worms and leave your team

the only one surviving and therefore a victor. In sort, you take it in turns to blow the crap out of each other. The game has several variants, such as tournaments and leagues, but the real boon is that the little cute creatures look and sound enough like Lemmings that you can joyfully imagine you are terminating those little beggars.

There are only two real bonuses of the CD version. Firstly, you get a CD audio track for each terrain, or can swap CDs for one of your own audio CDs and make the game play specific tracks for different terrains. Secondly, the use of the controller actually makes selecting the weapons and targets easier than with the original game.

One big downside, though, is that you can't simply sweep over the game area, as you could with the mouse, to

see where everyone is. Instead, you have to select a weapon that allows you to target, such as a homing missile, so that you can get a look around. Because you can't look around, it is a annoying flaw that the screen doesn't automatically centre on action as you can't always see what's happening and even have to aim at worms you can't see, even if they're quite close by.

This version has more or less just been dumped to CD by Team 17. It's not a game that takes full advantage of the CD status - why, for instance, could the CDXL animations not be incorporated into the game? Maybe not each time there was a kill, but at least at the end of each level or game even. However, it is a brilliant game that's now available to CD32 owners, for which we should be thankful.

In a classic cat/dog battle, Bagpuss evens the age old score by air-striking Lassie.

WORM HOLES

There seem to be quite a few glitches when trying to run this on anything but a CD32. The SimBoot utility supplied by AsimCDFS could not boot it. It is possible to load it from Workbench, but only some CD filesystems would let me do this. From the standard CDFileSystem and AmiCDFSFileSystem and AsimCDFS, only the latter loaded the game, which then expected you to have a CD32 controller plugged in for you to enter the code and play the game - a joystick doesn't work and the keyboard was locked out.

All was not lost, however, because, by accident, I found a way around it. Using a PD program called

WBCDBooter, couldn't boot the disc (as I was using a SCSI, not PCMCIA, drive), but did free up the keyboard when I tried to load it from Workbench. You can then use the keyboard and the mouse to play the game. (WBCDBooter was included on Coverdisks of Amiga Shopper 55, or should be available from PD Houses, if you want to try it.)

All of this is ridiculously strange and I'm close to blaming the file systems, or possibly the accelerator card I had in, but other games run without a hitch. It doesn't look as if the game has been fully tested on all configurations, so you might end up playing around before getting it to run, although you should be able to in the end.

CD-ROM

POWER CD-ROM

The Power CD-ROM for the Amiga 600/1200 plugs directly into the PCMCIA port and provides a direct SCSI-I and SCSI-II interface, allowing up to six additional devices to be connected. What's more the Power CD-ROM features a 'Hot-plug' which allows you to connect and disconnect the CD-ROM and any other additional devices even when the Amiga is switched on.

The CD-ROM drive comes with a SCSI interface, PSU, manual, audio lead, mains lead and software which includes Audio CD, CD32 Emulator, MPEG Film Decoder and Photo CD.

Release date

Out Now

Graphics 7 out of 10

Considering the restricted palette, the 3D is convincing enough.

Sound 7 out of 10

Solid, let down by the annoyingly intrusive sampled speech.

Addiction 6 out of 10

Doesn't have the needed hook due to the lack of competitors.

Playability 7 out of 10

Could be more competitive in one-player mode.

Overall verdict

Tremendous 3D engine somewhat let down by the lack of other cars on the circuits.

77%

In all, a competent, enjoyable romp, but not quite up with F1 for immediacy.

There are a host of different camera angles to be checked out. Most are cosmetic only.

Hailed as a "Formula One Grand Prix beater" by new kids on the block, Kellion, *Leading Lap* very nearly give the claim validity.

But not quite.

Before we discuss why, let's look at what makes *Leading Lap* a creditable pretender to the crown.

- 1) It's got a tremendous multiview 3D polygon based engine driving it.
- 2) The frame rate is fast enough to ensure a smooth, believable motor racing environment.
- 3) It makes use of extra memory, faster processors and FPUs.
- 4) The handling of the various cars is such that if you drive too fast on a long bend the car spins out due to excessive speed - incredibly

realistic for a game which is more arcade based than simulation.

5) It looks good considering the severe restriction on the palette - you can switch on extra detail, clouds, and extra distance viewing.

6) The driving has a reasonably good feel to it for a hybrid between an arcade game and a simulation.

And then there's the but. An unfortunate but, but a 'but' nevertheless. There aren't enough competitors taking part in the race - four in all. To maintain a credible sense of conflict throughout a full race, there should always be someone to press for a place, or someone pressing for a place on you.

That doesn't happen with *Leading Lap*. At first, as familiarity with the handling of the cars takes place, you're only likely to keep pace with

the fourth

placed car if you're lucky. Eventually you'll work your way up until leading the races from start to the finish becomes nothing more than a learned mechanical response rather than skill.

Still, it's fun in a limited kind of a way to reach the giddy heights of being the winner all the time. With twelve tracks to race on it's going to take you a reasonable stretch of extended play before approaching anything like full competency.

In all, a competent, enjoyable romp. Not quite up with F1 (reviewed on page 75) for immediacy and out and out pace, but still good enough to convince enough people to part with their cash for a few hours of solid entertainment. If you've got an Amiga friend, try out the serial link option; it's not bad.

GEAR SHIFT

The endurance car is a nice starter.

The Formula One car is the fastest.

The rally car has the best handling.

More gameplay than Ginola!

You don't have to acquire a French import to do it in style. Just load up a copy of Championship Manager 2 for incredible gameplay, addictiveness and a little *savoir faire!*

CM2 contains all the emotion and playability of the original, plus dozens of new features including the pressurised heights of International management!

Hints, cheats and tips. That's the staple diet of the Gamebusters. Here's **Steve McGill** and, boy, he's looking bloated.

SEND IT IN

If you have a hint, tip or cheat to share with other Amiga gamers, write to: Steve McGill, GameBusters, Amiga Format, 30 Monmouth Street, Bath, Avon BA1 2BW. Or, better still, send it on a floppy disk.

GameBusters

BREED 3D: Don't use the pulse rifle after level 2. Use the sidestep a lot. Try to exit levels with loads of energy.

ALIEN BREED 3D

Here's a combination set of hints and game codes for Team 17's fabby *Alien Breed 3D*.

- Level 1 - No Password Needed
- Level 2 - IMMHAJFJFFJFFJFF
- Level 3 - EAGGAGEPPKFFJFFJFF
- Level 4 - ANKGBKOPPPFFJFFJFF
- Level 5 - PBCIIEOPMCHNHFFH
- Level 6 - POKKIJOPNONJNHFF
- Level 7 - IKKMICPPPAFKHPFN
- Level 8 - NPKCNOPOKFMMAFFH
- Level 9 - LLKOGBPPBFGCGHGH
- Level 10 - LOKOGJOOLDGEEMFH
- Level 11 - HAAGCHOLIHOGBEHF
- Level 12 - ONCGHLPOKOFECNFF
- Level 13 - MDIGOEOLBBEONFB
- Level 14 - MOKGPJPLIFGEIMHJ
- Level 15 - LKKOPHPPDDNNBNOC
- Level 16 - OHCEKKPPFKFFBJEM

■ Step on it and open the wall to reveal a hidden store room full of lovely goodies.

When using rocket launchers don't get too close. It hurts.

1. From level 2 onwards, do not use the pulse rifle since it isn't powerful enough to kill efficiently.
2. The best general weapon is the shotgun.
3. To kill the flying brown aliens, select the Plasma gun, shoot a few times, hide round a corner, step out, shoot, hide, repeat as many times as it takes to kill the boogers.
4. When using the grenade or rocket launchers, make sure there is enough distance to fire, or else you will get caught in the explosion.
5. On level 3 (sewers), there is a partially flooded room that has an

USM: If you need to earn pots of money, follow our handily repetitive cheat.

unusually placed step in one corner. Step on it and open the wall to reveal a secret store room full of goodies.

6. On level 5 (system purge), looking behind you often may just save your life.
7. Try to exit a level with as much energy as possible, for you never know what awaits you...

Paul Ninnes
Weston-Super-Mare

ULTIMATE SOCCER MANAGER

David Squirrel has found a method of doing a George Graham with *Ultimate Soccer Manager*.

1. Go to the Match Day Options.
2. Select "Select Team".
3. Using "Swap Player", put your worst player as the the last reserve (i.e. the bottom of the list).
4. Click on "View" from the side menu.
5. Click on "Transfer List".
6. Click on "Fast Sell". The player

Mentioning anything about George Graham could get us into trouble. So we won't.

- now goes to some insignificant Third Division club for a ridiculously reduced price. Don't worry.
7. Click the mouse button to return to the team selection team. The player you just sold should now have gone and the green line should be highlighting a blank name.
8. Click on "View" and again, hey presto, the player you just sold is back.
9. Quickly, sell him again.
10. Repeat steps 4-10

After doing this about 100 times, go and check your bank balance and see that you now have some several billion pounds.

Warning: Once you leave the "Select Team" screen, the player is gone forever and you must repeat the process with another player.

David Squirrel

COUNTING ON THE BEST Final Calc

A new branch on the
SoftWood Family Tree

New Final Calc™ is the spreadsheet Amiga owners have been waiting for. Over four years in the development stage, Final Calc has all the power you will ever need - and then some!

With its friendly interface and on-line help for beginner and expert alike, Final Calc allows easy access to the most extensive list of features ever - including...

- Comprehensive Cell Type definition
- Unlimited Undo & Redo
- Outline Font Output
- Background Re-calc
- 178 Maths Functions with comparison/logical operators
- Direct support for PostScript™ & Preference Printers
- Print Spooler, Scaling, Auto-fit, Page Preview and Portrait/Landscape printing options
- 2D/3D Graphs with animation
- Read and Write Lotus 1-2-3, Wk1 files

COUNTING ON THE BEST!

PERFECTLY INFORMED Final Data 3

A Cultivated Approach
to Data Management

Now in its third release, Final Data 3™ retains its ease of use and unique method of simple data definition and entry - but, now includes more advanced features!

Even first time users can produce their own personal information files immediately! As you become more familiar, you can take advantage of...

- Running Calculations
- Multiple Line Memos
- An extensive Query Requester and... NEW Final Data 3 features such as, Hidden Columns
- Redefinition of Data (eg. from Text to a Memo column)
- Graphics, Sound and Animation (Requires use of Datatypes found in Workbench 3.0 or above). Why don't you become...

PERFECTLY INFORMED!

Final Calc redefines the way spreadsheets should work - fast and intuitive, whilst offering a range of advanced features.

Final Data 3 has undergone a major upgrade with improvements that extend its capabilities but retain unique, easy data entry techniques. If you would like to place an order or just require the FULL specifications for Final Calc or Final Data 3, please call our...

*Help on system requirements. Our products are the most economical in their use of system resources. Like others, we quote the minimum required to load our software, but please note that as with all programs, more memory/faster Workbench may be required to access all graphical features fully. If in doubt, please ask.

Who else but the World's leading Amiga home & office productivity software developer could offer you such a wide range of award winning programs?

A range acclaimed as the best for your computer with individual programs having received Amiga Format Gold, Amiga Computing Blue & Gold Chips, CU Amiga Top Rated and many, many others worldwide.

Final Calc™ Spreadsheet

The answer to every spreadsheet users' dreams! With its flexible modes of operation, it's ideal for beginners and experts alike.

- Layered sheets for multiple linked spreadsheet operation
- Advanced Printing and font handling with auto-fit to page(s) and complete document scaling
- Vast choice of graph styles including 3D and animated to show calculation results actually as they progress
- Unlimited number of Undo and Redo events with listing
- Lotus 1-2-3 .WK1 compatible & full text file import/export

*Amiga running Workbench 2.04 or later with a hard drive and a minimum of 2.5Mb of RAM - More recommended

£99.99
Inc. p&p

Final Copy II™ Word Processor

This powerful alternative is the ideal companion for Amiga users with single or twin floppy drives and a lower memory size.

- PerfectPrint™ - an advanced system that enables you to output PostScript™ smooth fonts to ANY printer in both landscape and portrait modes
- FastDraw™ - on screen drawing tools for creation of boxes, lines, borders, arrows etc.
- Other features such as newspaper columns and import of graphics and pictures with scale, crop and autoflow text

*Amiga running Workbench 1.3 with floppy or hard drives and a minimum of 1Mb of free RAM (1Mb - 1.5Mb) - More recommended

£49.99
Inc. p&p

Final Writer 4™ Word Processor/Publisher

The most powerful Amiga word processor for users needing the highest performance and most comprehensive range of features.

- TextBlocks™ - to position text at any size and angle
- FastDraw Plus™ - versatile selection of graphics tools
- TouchTools™ & PowerUser Bars™ - One touch commands
- PerfectPrint™ - You just can't print better on your Amiga
- French, German and Norwegian dictionary options
- Output PostScript™ fonts & clip-art to all graphic printers
- Supplied with 100 images and 120 outline fonts FREE!

£74.99
Inc. p&p

*Amiga running Workbench 2.04 or later with a hard drive and a minimum of 2.5Mb of free RAM - More recommended

Final Data 3™ Database

A powerful yet simple to use database with extensive features enhancing your potential to store important information EASILY.

- Easy definition of columns for categories of information such as name, house number, street, town, county, postal code, phone number etc. - no unfamiliar commands!
- Built-in routines for rapid label printing
- Print/mail merge with word processors
- 'Memo' feature, acting like a 'Post-It' note, to enter large amounts of text within any record

£39.99
Inc. p&p

*Amiga with floppy or hard drives running Workbench 1.3 or later and a minimum of 512K of free RAM (1Mb - 1Mb)

SoftWood
...Naturally Better

you can't buy this.

About to buy a new games machine?

Is it worth waiting?

Yes.

32 bit CD machines are fine, but they
don't cut it where it really counts.

They just don't have the power.

This does. 64 bit power. Nintendo Ultra 64.

The speed of silicon cartridge.

Not CD s - l - o - w.

You can't buy it yet.

After all, nothing this good comes easy.

But do you really want something less
powerful?

WAIT FOR IT...

Re-releases

F1

Powerplus ■ 1Mb Amigas
■ £15 ■ FG90%

There are so many flaws and annoying occurrences within the hallowed code of *F1* that you'll probably think I've gone mad by awarding it a posthumous *Format Gold*.

But there are two major saving graces which make everything forgivable and all right. Their names are speed and playability.

For *F1* is quite literally the fastest driving game on the Amiga ever seen – even on A500s. The speed is such that sometimes when you crash, you can't help but blanch. I've even been known to throw my arm in front of my face in anticipation (but only during a bout of intense concentration at the top level of play).

Its secret is the hybridisation of an arcade-style merged into a hi-octane simulation engine, resulting in one of the most intensely competitive games ever conceptualised and realised. And that includes driving games on dedicated consoles.

As an added bonus, it splits the screen to let you race against a friend and also holds the driving line on a bend if the player centres the stick – incredibly clever and helpful. In all, a highly competitive 'must-have' purchase for learners, drivers and nut cases like myself.

Top: Turbo mode gives 50 fps on a standard 1200.

Far left: Racing in tight bunches demands skill.

Left: Racing against a friend of similar ability is top fun.

Sensible World of Soccer 95/96

Warner Interactive ■ 1Mb
Amigas ■ £24.99 ■ FG94%

It's back. Not that it's ever been away. This time round, though, it's not bigger, 'badder' and better than before.

It is, however, almost the same price as of

old for minimal improvements. Which means that if you own *SWOS* already, the price is too prohibitive to justify purchasing this update (for that is all it is).

So, onward to the differences from *SWOS 95*. The first and most obvious change is the updated data. Newcastle are a blinding team to play now, as are Arsenal and numerous other Premier league teams with foreign signings.

Collymore's great as well – surely some mistake.

After-touch has been around for years, now you can add it to on the deck passes. It makes the ball look as if it's skating, but when you get used to it, it can fox your opponent

and gain extra ground and time for the rest of the team to push forward, or fall back.

Players are star-rated in the team listing and their three main attributes are highlighted beside the star rating. So, if you were up against a goalie like Schmeichel or Seaman, you'd probably be best off using a striker with a high velocity shot.

When playing the management side of the game, players who are played to their full go up in value and when, as a manager, you're particularly interested in another team's player, you can highlight them to make following their progress easier.

Not a great deal extra on offer, but if you're still struggling along with an older version of *Sensi* – not *SWOS* – then it represents a must-buy.

Hey, hey, hey... look, there's the star system in use.

Centre the stick and the man passed to finds space.

£5 million for Laudrup – he's worth double that.

There are some real gems in the Public Domain treasure trove this month. Steve McGill is your invaluable guide through the maze.

PD Select

KIDS ONLY: Big, bright, brash, in yer face visuals prove attractive to children and schizophrenic adults alike. A fun introduction to computers for all ages.

KIDS ONLY

By _____ Mark Meany
Ware _____ Licenceware
PD Library _____ Seasoftware
No of Disks _____ Three
Price _____ £10

Kids above the age of three are more than capable of spotting immediately when they're being patronised. Parents aren't always so astute. Especially when the words 'computer software' and 'educational' are used.

Educational computer software for kids has traditionally been bought by well-meaning parents with more money than sense. That isn't to say that there aren't any worthwhile educational packages out there. It's just that finding one is almost as perilous a quest as searching for the Holy Grail in Macclesfield.

Kids Only is an exception to the rule. Not only is it fun to use, in order for the kid to succeed, logical, creative and applied thought has to be engaged in; the building blocks for character in later years.

The seven games are an eclectic collection of memory, puzzle, musical and cognitive tests. They are gradeable in difficulty enabling a range of kids from the age of about 3-7 to use and enjoy the package. Recommended, you know, for kids.

NOTHING BUT AMOS

By _____ Neil Wright
Ware _____ Disk Mag
No of Disks _____ Two
PD Library _____ Seasoftware
Price _____ £2.40 per disk or £4.50 for both

NOTHING BUT AMOS: Pre-drawn sprites can be a god-send for non-artists.

KIDS ONLY: Learning the notes that make up a keyboard is fun. Being able to save the tunes created to show dad is a great idea.

With the withdrawal of Europress from the AMOS scene, things might seem a bit grim for the programming language of the people.

Admittedly, Blitz Basic is gaining presidency due to its general superiority in all realms of Amiga programming – it's Acid Software and Mental Software's development tool of choice.

But that discounts the

NOTHING BUT AMOS: Use backgrounds like these in any way you like.

A GALLERY II GREETINGS:
Jason Jordache,
taking the Amiga
to new frontiers.

A GALLERY II GREETINGS: Most of this artwork was created for greeting cards. Jason must have pretty strange friends.

A GALLERY II GREETINGS:
It's not just the grotesque
that catches your eye.

importance of the numerous user groups dotted throughout the country. A lot of them are held together by the very popular *Nothing But AMOS* magazine.

Despite a longish absence due to editor Neil Wright's various commitments, it's back, continuing the tradition of providing AMOS users with useful source code, tips, graphics, and programs.

£4.50 for two disks might seem a bit steep, but if you want to get the best out of the language and gain some useful contacts into the bargain, then you can't go far wrong with these disks.

A GALLERY II-GREETINGS

By Jason Jordache
Ware Freeware
No of Disks one
PD Library 17 Bit Software
Price £1 per disk plus 50p p&p

Fans of the *Amiga Format* Gallery (go on, check it out now, in the letters pages) will be familiar with the name of Jason Jordache.

Famous/infamous for some of the most attention-grabbing images seen in our illustrious pages, this disk is a collection of some of his best work.

Primarily aimed at the card market, Jason's heading in the right direction, releasing these images into the Public Domain. Not only

will people be able to use them as they see fit – so long as the law of copyright isn't breached, that is – they're bound to illustrate to other people just what can be done if you put your mind to it.

BLACK DAWN SIX

By ZSoft
Ware Licenceware
No of Disks Two
Library F1 Licenceware
Price £4.99 plus 50p p&p

Possibly one of the best showcases for the software concepts of shareware and licenceware, the *Black Dawn* series of adventure games almost have a large enough following to take them out of the realm of cultishness.

It's easy to see why the series is so popular. Relying on the *Dungeon Master* concept, they place the would-be adventurer in strange alien landscapes and mostly invite them to make their escape.

Black Dawn 6, the latest adventure takes the role-playing concept further than it ever has before. You can enter the game with a set of pre-rolled characters, or opt to roll your own.

To make things easier for the gamer, if he/she doesn't like the attributes of the character that's just

been rolled, they can keep rolling with no penalty until a better character comes up. Top idea.

The game presents the usual challenges along with a few surprises that I'll leave you to find out about yourself. Thoroughly recommended, and edging toward that 'virtual' Format Gold that we hold in our heads for particularly good examples of a genre in the licenceware circuit.

BAYGON

DEMO

Melon Design (available from the Internet via ftp at Aminet sites, eg. src.doc.ic.ac.uk, in demo/aga/mln-bts.dms)

Another bizarre piece of psychedelia from Melon, released at the *Somewhere In Holland* party earlier this year, leaves us a little worried about what these guys have been slipping into their morning cocoa.

This time round our slice of Melon goes, partly, as follows: some crazy, kiddie-chalkboard, wireframe animations; a smoking (half-eaten), Japanese babe; some space invaders casually stomping round the screen, along with an extremely strange, lolloping rap soundtrack. In any demo like this, it's the design that makes it and although this is

BLACK DAWN SIX:
Surely there's going to be a
full commercial release soon.

will look like from here.

PD Selection of the month

FASTVIEW V2.0

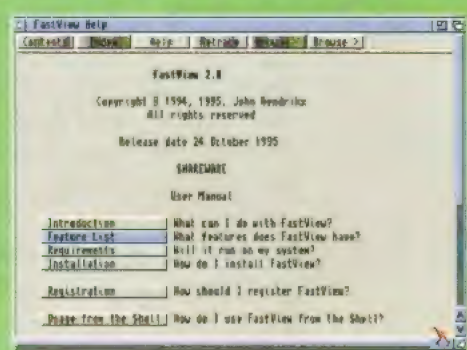

SHAREWARE

Shareware (available from the Internet via ftp at Aminet sites, eg. src.doc.ic.ac.uk, in gfx/show/FView20.lha)

Always helpful, especially when BBSs, the Internet, and CD-ROMs are bringing us ever more in contact with image files of non-IFF file format, is some kind of decent image-viewer. FView is, happily, that viewer.

Not only is it very fast (and comes in separate 68000 and 68020 versions, which is neat) and shows the full complement of IFFs, GIFs, JPEGs, and so on, it also shows HAM8 and 24-bit graphics in OCS/ECS, by converting the file.

It'll load and decode the next picture whilst you're looking at the present one, and there's the option to save out the current screen as an IFF, whatever image it was loaded in as. There's optional dithering, and downscaling to make the picture fit the screen, too.

Fast View also has an extensive help file which will prove of use to new and inexperienced users.

Most people should find FView very helpful, even if you only seldom come into contact with GIFs, JPEGs, and suchlike. For those who have to deal with piles of image files regularly, or would like to, it could be invaluable. And what's more, it won't even ridicule you when you use it to browse your *Little House On The Prairie* GIF collection.

normally use ViewTek to view files like this gallery winner, but I'll start using Fast View now

incredibly far-out stuff, nobody can deny that it's impeccably designed.

At the end of the whole caboodle, they note, "you've just spent a moment in the Melon universe". Another moment and we might all start thinking this stuff was normal... perhaps?

To cap it all, it has been decided that the Kickstart icon we currently have is all wrong, so they've replaced it for us, temporarily. With a grinning, yellow man, holding a disc, no less. Why, thank you Melon Design. Crazy, very crazy, but also very inspired.

SURFING ON A JAZZ WAVE

DEMO

Grooving Brothers (available from the Internet via ftp at Aminet sites, eg. src.doc.ic.ac.uk, in demo/sound/Surfing1.dms+Surfing2.dms)

This music-disc is, quite frankly, oozing class, right from the soul-jazz title sequence, with the Motown diva looking sultry right at us. In fact, the whole production is very Gallic: laidback, yet chic. The very well-drawn, hi-res graphics are evocative

of *Blue Note* and *Talking Loud* album covers in a way that manages to be both old-style and new-school, and the acid-jazz soundtrack from Chrylian is frankly astounding.

Only very seldom would you even be able to tell the songs were actually coming out of a computer, so expertly is the Amiga sound chip manipulated. And with six tunes to choose from, including such nouveau funk titles as *A Travel in my Mind*, and *Surfing as a Space Groover*, there's a decent choice of listening matter.

There's also quite a cute attempt to list and characterise what looks like Chrylian's record collection, with some comments on their styles. Unsurprisingly, the artist formerly known as Prince gets an "unclassifiable" mark. But the artist still known as Chrylian and his French chums, most certainly get classified as top notch.

SURFING ON A JAZZ WAVE: Jazz, one of the few musical styles that makes my hackles rise.

BAYGON: The wireframe animation imparts a trippy feel to the demo.

MEMO

"Cor. Groovy" exclaimed our newest of new art assistants, "this would make a great T-shirt".

SERIOUS

The Universe is a complicated place and simulating in 3D can be a pain, but *IMPACT!* could change all that.....p.84

AMIGA FORMAT

BLINDED WITH SCIENCE

Graeme Sandiford

You may need to brace yourself mentally because this month's Serious section is serious in the extreme.

We have a powerful program that uses scientific principles to perform complicated tasks. *IMPACT!* is a real world animation system for LightWave that calculates collisions and manipulates objects with the laws of physics.

If all of this is a bit much for you, you'll find some light relief in our reviews of the new Microvitec 1438 monitor, *MainActor Broadcast*, a new paint program called *XiPaint* and a nice and simple networking solution from Canada - *Link-It!*. Not forgetting a look at some of the hottest CD-ROMs around.

REVIEWS

83 ASIM 3.0

David Taylor takes a look at what might just be the most fully-featured CD-ROM filing system ever. However, is it really £50 better than its PD counterparts?

84 IMPACT!

With the addition of inverse kinematics in the belated LightWave 4.0, this popular 3D animation system will have only one weak spot - collision-detection. *IMPACT!* adds this and real world physics to make creating animations easier and more realistic. Graeme Sandiford chuckles maniacally and revels in the god-like power.

86 XIPAIN 3.2

Nick Veitch dons his favourite black beret, loads up *XiPaint* and goes in search of inspiration for his next pixel-constructed masterpiece.

91 MICROVITEC 1438 MULTI-SCAN MONITOR

David Taylor tries to save his failing eyesight with the Amiga's new monitor.

93 LINK-IT!

Graeme Sandiford shakes his head in disbelief as he finds a network solution that actually is simple and even works with those troublesome PCs.

96 MAINACTOR BROADCAST

John Kennedy attempts to discover why this program is well worth £199.

101 CD-ROM ROUNDUP

Nick Veitch raids Graeme's fabled stock of CD-ROMs and grins nefariously as he emerges with some choice discs, including the follow-up to the *Aminet Set 1* CD.

"If you print without it, you have only yourself to blame!"*

*Review in German "Amiga Plus" Magazine Dec 95

TURBOPRINT

Professional 4.1

Our enhanced printer driver system has now got even better!

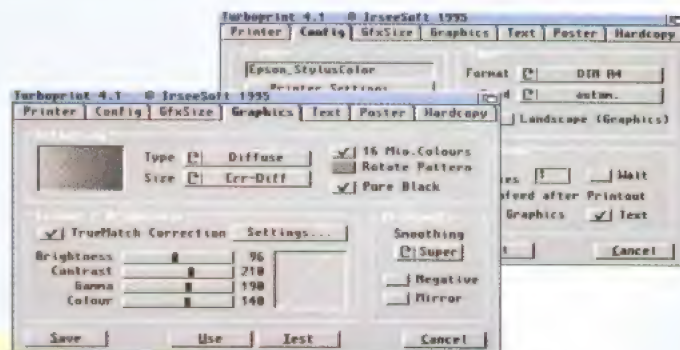

Outstanding: TurboPrint will not only output 24 bit-graphics directly from your floppy or hard drive in the highest quality possible, but will also print **from applications** like Personal Paint, Deluxe Paint or Brilliance with the **full colour palette** available with AGA-graphics chipset. Although utilising the standard Workbench printer interface, printout will **not** be limited to the usual 4096 colours.

Perfect printouts from day one:

TurboPrint combines ease of use with **unparalleled output quality**. Simply choose your printer, and go: With our brand new **intelligent printer drivers** you'll get fantastic results straight away.

Matching colours: With the new high-speed "True Match" colour management system up to **16 million colours** are closely represented by the printout.

Various settings, like brightness, contrast, colours, and many more, allow for **individual configuration**.

The Preferences Menu with 7 "Index-Cards"

Easy to use:

- ✓ Intuitive and clearly arranged preferences menu. Style guide compliant. May be **hotkey-activated** at any time.
- ✓ **Hard copy function** for fast printing of screens.
- ✓ **Poster function** for oversized printouts.
- ✓ **Compatible** to your existing Amiga software: No difference in printing, except new levels of quality.
- ✓ Will run on every Amiga model with Workbench 2.0 or higher.
- ✓ Supports even the latest **printer models**, such as Canon 610, Epson Stylus Pro/Color II/IIs, HP 660/850.

Press Reviews about TP Pro 4 - "Best Choice"

"TPrint 4 is the new leader in every respect. It is simply the best choice"

Amiga Special 9/95

"Hard copies with cutout-function, poster printing, a comprehensive manual and lots of improvements form an **outstanding printer driver system**"

Amiga Plus 8/95

"The already impressive print results have been further improved, with the new True Match system playing an important role. Handling could not be much easier."

Amiga Magazin 9/95

The Print Manager showing the Layout function

Improved Graphics Print Manager:

Our integrated multi-format print and display utility has been considerably improved. New functions include support for **JPEG**, **BMP**, **IFF DEEP ILBM**, and many more.

Any picture up to 16 million colours may be displayed either in true colour (with **CybergraphX** on third party graphics cards) or dithered with up to 256 (AGA) or 16 colours.

The new **Layout function** allows for precise mouse-controlled selection of printout size and position.

No need for test printouts: The Graphics Print Manager will allow the user to control the results of all changes made to the print parameters (Brightness, Gamma Correction, etc.) directly **on-screen** before printing.

Make your printing dreams come true!

Asim CDFS 3

Complete control over CDs is not as simple as "plug and play".

David Taylor looks at the "ultimate" in CD software.

Asim CDFS (Compact Disc File System) has been around for some time, but hasn't had massive market penetration (as I'm sure those from over the pond would like it to be called). This new version could make all the difference, because to say the features it offers are extensive is an understatement. This brings your Amiga and CD-ROM into universal harmony.

The first thing you need to do (except buy a CD-ROM player and attach it) is install the software. Because it's for a CD drive, it is really expecting a hard drive. It might, just might, be possible to use this with floppies, but frankly, at the price, this is serious software and if you need this much control, you must have a hard drive. To install the full set of utilities, I'd estimate you need around 400-500K free on your system partition.

Installation is via the standard installer, which is both a blessing and a curse. The script checks that you have at least the minimum 150K free before going any further. Should it find any errors, the script escapes, which can be annoying if it discovers a write-protected library, for example. The script escapes but with much of the software installed, you may no longer have 150K free on the disk, without which the script refuses to run. It can require some fiddling.

You can happily get by using the standard preferences, but should you want to customise the options, then it can be done very easily through a set of GUI preference programs. These programs are at the heart of Asim and bring real power quickly to all users.

Obviously, it allows you to access the standard (ISO 9660) discs, which covers all Amiga-specific titles. The power of Asim doesn't lie in this, although the number of buffers and amount of memory designated to each volume is useful and more flexible than other, cheaper CD filesystems.

Asim also includes CDTV and CD³²

Photo CDs are transparently converted - just one of Asim's features.

emulation. You can set the software to detect a CDTV or CD³² disc on boot and make it boot that disc, in theory. Obviously, for CD³² compatibility you need to be using an AGA Amiga with sufficient memory, but if you can't get a title to boot, all is not lost - the makers of Asim recognise that it might not work and have included a Simboot utility. With this you can boot the CD drive from Workbench. It isn't 100 per cent compatible, but you can't expect it to be.

In addition, you can view Photo CDs, which can be detected automatically. The software then gives you transparent access to the pictures, converting them to IFFs very quickly on the fly. In practice, it wasn't completely accurate and didn't recognise some Photo CDs first time.

It would have been nice had a separate Photo CD viewer had been included, because should you find some photos stored on, say, a Macintosh HFS disc (which Asim can also read), you can't view them. There are, however, Photo CD viewers available in the Public Domain, so it's not a problem.

Audio CDs and CDDA are also well catered for, with a reasonably featured Asim Tunes program to allow you to play audio tracks from discs which have audio tracks on them. This doesn't mean just audio CDs, but also data discs which may have some audio on them. You can set the software so that Asim Tunes is launched automatically when it detects CDDA. Asim Tunes lacks a little in aesthetic terms, but there are plenty of PD players if you want a change.

Asim has masses more to offer. You can use it to look at raw data tracks on CDs. You can use it to govern a hard drive with valid ISO 9660, High Sierra or Mac HFS image stored on it, or even a similar AmigaDOS file (this is a feature for CD developers). Considering the fact that Asim offers coverage of all CD systems, I can overlook the fact it wasn't 100 per cent reliable and got tripped up a few times. That was throwing everything at it; in day-to-day use, you'll never have a problem and if you do, it's only a case of rebooting.

Oh, it also comes with a free Fred Fish Fishmarket CD, in case you thought it was expensive.

The Asim Preferences program gives easy access to all the features of this powerful filesystem.

PRICE

£49.99

SYSTEM REQUIREMENTS

Workbench 2,
hard disk recommended.

SPEED

With so many different file systems to check, it can take some time for a Photo CD to appear, for example.

MANUAL

Extensive coverage of every aspect, but a little confusing at times and really needs an index.

ACCESSIBILITY

Installation can be tiresome, but the GUI preferences are brilliant.

FEATURES

Everything you could need. Occasionally flakey, but not enough to really notice.

VALUE

It's not cheap, but offers so much that it's a bargain for serious users. Better than just paying for CD³² emulation for example.

"It's staying on my system. That's good enough?"

85%

Running an animated universe is a serious headache. Graeme Sandiford knows how to escape this tedium and produce more realistic animations?

IMPACT!

A common, and understandable, mistake that people not involved with 3D graphics make is that 3D artists spend hours studying thick manuals and rendering scenes simply to make nice pictures or animations. Wrong. 3D enthusiasts expend so much effort for the ultimate creative buzz – virtual godhood. There's nothing like creating your own mini universe and animating carefully crafted objects and characters in an environment of your choosing.

However, godhood, like any profession or station in life, has its responsibilities and drawbacks. In most 3D programs you can't tell an object to bounce off the ground or off other

objects in their environment – you have to move the object by "hand" to the ground and attempt to emulate the bouncing motion. To put it simply, running a universe is a serious headache, especially in complicated scenes, involving lots of objects.

So, how do you escape this tedium and produce more realistic animations? Well, the best way is to have your 3D package emulate the natural laws of the physical universe, such as gravity, mass, velocity, acceleration, collisions and forces. Unfortunately, LightWave, one of the most popular 3D programs, does not have support for such features.

This is, with the addition of inverse kinematics in version 4, LightWave's only serious limitation and one that is patched by a new program from the US called *IMPACT!*.

So how does it work? Well, the basic idea behind *IMPACT!* is that every object is given a set of characteristics, such as weight and other material attributes, just like in the real world and is then set free to interact with other objects and forces. A classic example of this is a bowling ball with a given initial velocity hurtling along the ground, hitting some bowling pins, which in turn hit several other pins.

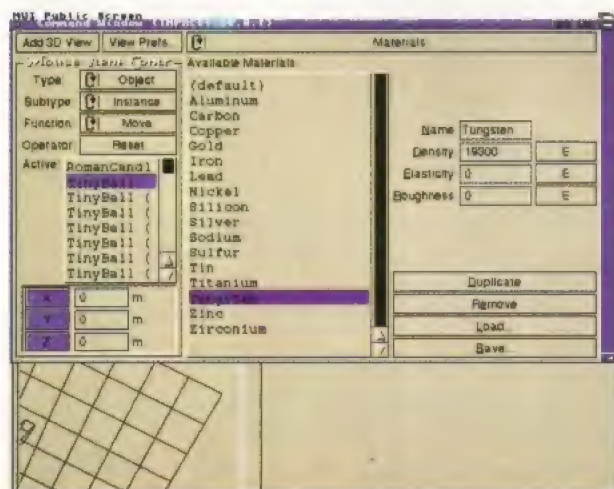

IMPACT!'s interface makes use of MUI and consists of several independent windows and a menu system. The main window is where most of the program's operations are performed, while as many 3D views as you want, or as are practical on your system, can be opened. The program is

very similar to LightWave's Layout editor in operation, enabling you to move, rotate, scale or stretch either the camera, a light, or an object with your mouse.

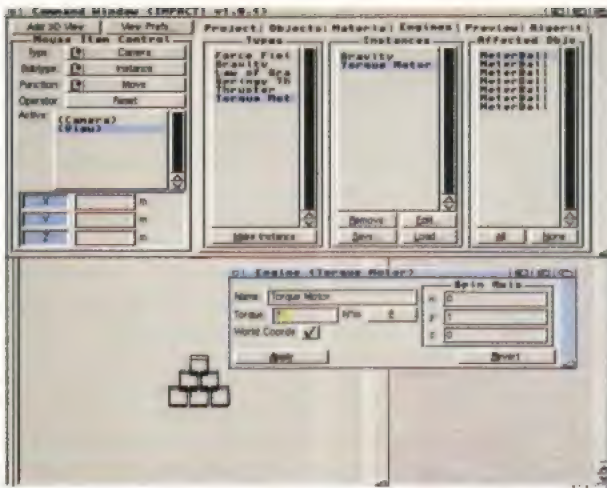

It is possible to load objects straight into the program, but generally it is easier for you to create a scene in LightWave and then import it into *IMPACT!* later on. As well as loading LightWave scenes and objects, the program can also make use of envelopes so that you can determine how an object will behave over a period of time. However, a feature that would have been nice to have, but is missing, is saving motion paths of objects, although this can be solved by exporting your project as a LightWave scene and then saving the motion path.

Once you've loaded your objects into *IMPACT!* the next thing you need to do is to determine how they should behave. As far as *IMPACT!* is concerned there are only two types of objects; keyframe and kinematic. Keyframed objects are unaffected by any of the forces applied by *IMPACT!* and any collisions with objects. A keyframed object on set motion path will knock any kinematic objects out of the way and if a kinematic object collides with a stationary keyframe object, it will bounce off.

A nice feature is that keyframe objects can become kinematic at any point during the animation by specifying a time in seconds, or on contact with another object. An example of how this could be used is

To accurately calculate motion, all objects must have properties of roughness, density and elasticity, defined in the materials screen.

As well as gravity, many other "engines" may be applied, such as force-fields, thrusters or even a torque motor.

You can position and scale objects, move the camera and generate previews without ever leaving Impact!

flying a spaceship through an asteroid field and then have it collide and subsequently bounce off an asteroid.

In order to control the movement of kinematic objects, you can either apply an "Engine", set an initial velocity, or combine the two methods. Setting an object's initial velocity is the simplest method and is effectively an object in a particular direction. To specify the direction, you are given control over both the objects linear and angular velocity which determine the objects direction and spin respectively.

The engines are one of the program's most powerful features. The manual describes them as "motion behaviour generators", which essentially means they determine an object's motion through external forces. In *IMPACT!* these engines can be applied to some or all of the objects.

The most obvious engine is gravity which acts just like gravity on a planet – it pulls objects along a given vector (for example, straight down). By default this is the same as Earth's, but you can create your own gravities, even anti-gravity. A related engine is gravitation which is based on Newton's Law of Gravitation – in layman's terms, the way that the planets attract each other.

Speed kills. This car should have known better than to race along at 200 metres per second – especially as Graeme left a big concrete block in the road.

The force field engine is a radial force-generator that can either attract or repel other objects. As you might expect, it also exerts a reactive force on the objects it's attached to – unless the object is keyframed. This engine is great for creating explosions.

The thruster engine essentially pushes an object in a direction. However, as the direction of this force is based on the origin of the object, it makes them move as if an engine were attached.

The torque engine is a turning force applied to an object relative to a specified axis. Continued application of this engine will cause an object's rotation to accelerate.

The last pre-defined engine is a weird one called springy thingy. This makes the objects behave as if they were all connected together by springs; like I said – weird.

Another way of governing the behaviour of objects is by giving them materials. These contain

information about an object's density, elasticity and roughness.

The density will effect things such as gravitational engines (the program also works out the object's mass from this, as well as its volume), the elasticity will determine how bouncy an object is and roughness will be a factor in evaluating friction.

Two other great features of this excellent program include algorithmic control and a collision shape option. Algorithmic control enables you to control the movements of a group of objects as a body with formulas. The collision shape option enables you to force complicated objects to be replaced with a sphere or a rectangle and thereby speed up collision calculations considerably.

This program is more than simply a cleverly thought-out piece of maths – it's an application that transforms LightWave into one of the most complete 3D animation systems available today.

PRICE

£164.50

SYSTEM REQUIREMENTS

LightWave, WB2+,
6Mb recommended

SPEED

The frames are generated very swiftly indeed, unless large numbers of objects are involved.

MANUAL

The documentation, such as there is, is good and the readme text is funny and informative.

ACCESSIBILITY

It should be at least as easy to use as LightWave – perhaps easier for some.

FEATURES

The engines supplied will fulfil the needs of most "real-world" situations. It does require some practice to set up all the conditions correctly, though.

VALUE

It seems pricey, but a lot of work has gone into making this software. You might expect a better manual though.

"Anti-Gravity have brought the real world to your copy of LightWave."

87%

Take an ordinary shot of a crowd and subject it to some of the filter effects and... voila!

A 24-bit true colour paint package with layers. On CD. At a reasonable price? Surely this is too good to be true? Nick Veitch investigates.

The growing acceptance in Germany that the Amiga is still a force to be recognised, and the faint whiff of a feelgood factor in the UK, have led to some interesting products, which have long been stalwarts of the market in Germany, being finally translated for the English-speaking market.

XiPaint is not really an introductory paint package, it is supposed to be a high end, true 24-bit painting engine. I say *should* be, because one of the first things you notice is how many features, considered standard on "lesser" packages, are not present at all in *XiPaint*.

The CD comes complete with many example pictures and brushes, from raytraced images to textures and photographic images such as this.

XiPaint is very modular. Each of its requester screens is essentially a separate task, so you can be changing your colours whilst waiting for the airbrush tool to finish. Believe me, this can take time. Unfortunately, although

there are some very undoubtedly great features in *XiPaint*, it is also missing a few of the basics. It seems to have been constructed in a modular way by several people, all writing code for routines they wanted to add. This means that bits they didn't want to do are missing. But let's not be too hard on it yet.

One of the tremendous things about *XiPaint* is its screenmode support. It can run on virtually anything and still give you a fairly realistic image. Although it works internally on 24-bit image data, this is dynamically rendered to various screenmodes from HAM up. Obviously the HAM and HAM-8 (AGA machines) modes are slower than true colour ones, but they still work.

USEFUL LAYERS

One of the most interesting features is the layer support. Layers are very useful for putting together composite images. Say you have a picture of an attack helicopter and you have a background picture of some Colombian drug farm. Stick them on layers and not only can you composite the image, but you can easily reposition the helicopter many times without having to generate new images. It's as though you have the helicopter on a transparent background and you can just move it around.

Well, that's the theory. In reality, to use the layers you do have to generate a new composited image every time, by selecting the layers you wish to combine from a list and then selecting a gadget which generates a new window for the composited image. This doesn't really bring it that much further on from more traditional methods and can't really be compared to the layers ability of *TVPaint*, for example.

The file import routines are a bit suspect too. I had a perfectly valid Targafile, which both *AdPro* and *ImageFX* were happy with, but which kept giving errors on *XiPaint*. The default format for *XiPaint* is a strange

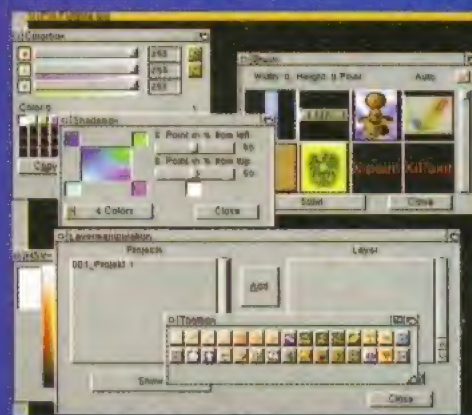

LIKE A CIRCLE IN A SPIRAL

As *XiPaint* follows such a modular design, most of the actions are carried out by semi-autonomous requesters. This means you can have the colour, brush, pen, layer and load requestors open at the same time, as well as many others.

Although this can be vaguely advantageous, the requestors soon clutter up

the screen and flipping between them can be a pain, especially if you are using a HAM-8 display, because they do take a while to redraw properly.

The toolbar is also a separate window, which can be moved around and even be resized, so you can position it exactly where you like it. It does need to be quite big, though, because most of the icons are confusing enough without the added disadvantage of being only 2mm high.

This is the starting image for a demonstration of the layer function. Actually, this is one of the images that is supplied on the CD.

By setting up the transparency map, we can place other images over the top of the background, using the layer panel. There are many ways in which you can combine layers.

After the masked layer is done, a further background colour is added. It is not exactly simple, but it certainly does work. Perhaps the next version will have a preview mode.

Although there are certainly plenty of filters in XiPaint, it is more of a paint package than an image processor.

hybrid, which includes a preview image.

Now, while it may be important to have a custom image format to save images (which may contain a number of layers in the case of projects), I think it is only fair that a Datatype is included, so other packages have a slim chance of being able to use them. ImageFX has preview icons, but saves them out as a separate file, for instance, which every other graphics package can safely ignore.

Thankfully, XiPaint is available on CD, something which is to be commended. The CD includes plenty of example images and brushes; the only minus points involved here are that it can take quite some time to read a directory, because the requester seem to take ages to find and extract the previews for all the files.

This sounds like a terribly negative review, but I don't mean it to be – it's just that potential purchasers should be well aware of the limitations. On the whole, XiPaint is actually quite a tremendous package with a lot of potential.

While there is a sense of it not being quite finished, it is certainly operational, functional, and capable of some very impressive results. It is perhaps more of an art package in the traditional style than anything else. It is a lot easier to find similarities with DPaint than with the likes of Photogenics.

At last, Amiga Technologies has launched a new product. Hurrah! Is it one of the long-awaited new generation of Amigas that we all want to save our world? Nope, it's a monitor. In fact, it's someone else's (Microvitec) monitor rebadged by Amiga Technologies.

I think it's important, when considering this new peripheral, to recognise the flak Amiga Technologies are going to get. Everyone wants a new range of Amigas. The users (you lot) want it, the media (us lot) want it and the businesses (them lot) want it. So, the release of a monitor, one not even made by AT, is going to get some stick, which is a real pity, because it's not a bad monitor at all.

Yes, this monitor is a stereo version of Microvitec's 1438 - same specs, everything. However, before slating AT for just stealing a monitor, it should be remembered that some of Commodore's monitors, which were really good, were actually no more than rebadged monitors from other manufacturers. So this monitor, in my opinion, stands or falls on its own merits. Forget the other stuff.

The best thing about this monitor, for the majority of Amiga owners is that it is just a case of plug-and-play. You put the stereo leads from the Amiga to the audio in of the monitor, connect the 23-pin connector directly to the monitor port of the Amiga and connect the power. Unlike some monitors, there is no need for an adaptor.

Unfortunately, this is both a good and a bad thing. Had the monitor come with a 9-pin connector and an adaptor, it would have been possible to connect it directly to display cards (like the Picasso) whose display modes the monitor can theoretically show, but would have meant using an adaptor to plug into the standard Amigas.

NOT A CRITICISM...

AT could be criticised for producing a monitor that wasn't even designed for Amiga owners. However, whilst 9-23 pin adaptors are bulky and annoying, at least they exist. The manual, although worded in a very muddled way, suggests that users needing 9-pin input should get an adaptor - er, where from? Perhaps they could offer 9-pin versions specially to order, although that would doubtless be expensive.

The answer then seems to be that this is a monitor for normal Amigas. If you want to use an input different to the standard Amiga, don't get this monitor. That's not a criticism. Complaining about that would be akin to buying some computer speakers and then saying that using them with your Hi-Fi was useless.

The picture quality of the M1438S is adequate. I prefer it to the old 1084 that I was forced to use when Nick stole my other monitor whilst I was away (damn his oily hide!). Thankfully, it can show all modes including Productivity, which I don't personally use but on occasion receive pictures in. If you can't display them, you just lose the screen, which is annoying and means you end up converting the image, which is time-consuming.

One downside is that the space between horizontal scan lines is visible, but the display is clear and better than some older monitors.

The sound output is fairly standard. It sounds OK, would be fine for games, but is nothing compared to putting the audio through a stereo.

The monitor has all the controls on the front, making them reasonably accessible, although their size makes them a bit fiddly. While there are horizontal centring and vertical size controls, there isn't a vertical centring control, which would have been useful. It also comes on a swivel stand, which makes tilting the display possible.

All in all, this is a compact and competent product. It won't revolutionise the world and there are other criticisms that could be levelled. Why, for instance, when the monitor has a 23-pin connector does the documentation show a 9-pin connector? Sloppy. The lack of composite input, available on the old Commodore monitors, is also a little disappointing. However, you've got an Amiga and you want a general monitor that's easy to use? This is a possible (but not a definitive "the") answer.

Are we seeing things, or is this a new Amiga product? At last.

The first official Amiga product since the demise of Commodore is a new monitor. David Taylor takes a look at the...

Link It!

Two heads are better than one, or so they say, and the same goes for computers – perhaps even more so. Graeme Sandiford finds out.

Having more than one computer certainly has its advantages; it means you may have twice the resources – another processor, hard disk, or CD-ROM. However, to get the maximum benefit from a two-computer setup, you'll need a networking solution, which is just what Link It! is.

Nowadays, there are so many networking options that it's hard to find a solution to suit your needs and budget. Should you get an ethernet connection that provides a fast but expensive connection for several machines, or perhaps a cheap and cheerful serial link? Then you need to make a decision on what software you'll be using, which is especially difficult if it involves machines of different platforms.

Link It! falls more closely to the cheap and cheerful category and provides a simple and cost-effective connection between two machines. This can either be between two machines of the same kind – Amiga to Amiga, or PC to PC – or differing machines. In order to do that, Link It! comes in two flavours: Windows and Amiga.

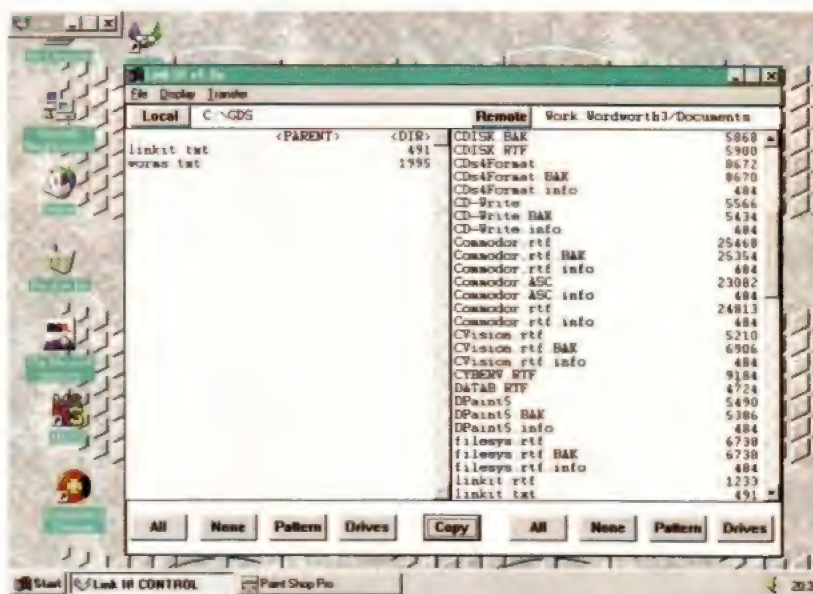

Installation was surprisingly easy, even when connecting a PC to an Amiga; you simply connect the machines with the cable of your choosing, serial or parallel, and then install the software – five minutes hassle-free work.

Once installed and running, you can copy files from systems using a simple Directory Opus-like interface that lists the files on both local and remote machines in separate windows. You are given access to all of the available drives, including the RAM disk and CD-ROM drives.

You can select files by clicking on them, performing a Select All, or using a wildcard filter. It is possible to keep a log file to keep track of your activities and choose a file sorting method.

A file manager style front end ensures (almost) fool-proof transfers.

If you really must, Link It! will connect to a PC to transfer files to a decent Operating System.

The performance of Link It! depends on the lead you use to connect the machines, because a parallel link is usually quite a bit faster, although Link It! supports serial transfers up to 115200 – providing your machine is up to it, of course. A useful transfer-related feature is a time and size estimate, which will give you an idea of the total size of the files you want to copy across and how long it should take.

Another useful feature is being able to execute programs and ARexx scripts on a remote machine, although this only works with an Amiga to Amiga connection. However, perhaps the

most unique feature of Link It! is its ability to convert different types of files as it transfers them. To do this, it uses external programs – either the ones supplied with it, mainly graphics-related programs, or your own.

There you have it, Link It! is a flexible, yet easy to install and use, networking system. It is not quite as transparent to use as Sernet or Parnet, which create a network directory, but is a darn sight easier to install and requires no technical knowledge – if you can use a file manager, you can use Link It!. If you want a simple way to transfer files between two machines, this is one of the best no-fuss ways of doing it.

LINK IT!

Activa International & Anti Gravity Products Europe 0181 402 5770.

PRICE

£45-50

SYSTEM REQUIREMENTS

Windows 3.1 or '95 for PCs

SPEED

Although it is not as fast as an ethernet connection, it is as fast as your parallel ports can go.

MANUAL

Even though the program is a doddle to use, the manual is still very good without being tedious.

ACCESSIBILITY

True plug-and-play, even on a PC.

FEATURES

Does all you can expect from a file transfer program and even converts files for you.

VALUE

It is a little pricey compared with other serial and parallel systems, but, on the other hand, is much easier to use and also more flexible.

"A simple, no-fuss way to transfer files between two machines."

MIDI MASTER AVAILABLE
SEPARATELY
£19.99

- ▲ Full specification Midi In, Midi Thru and Three Midi out sockets.
- ▲ Stylish case to match Amiga colours
- ▲ Fully Opto Isolated.
- ▲ Compatible with ALL leading music packages.

FULL MIDI SPECIFICATION:

- 49 Standard size, velocity sensitive keys with 10 velocity curves.
- Supports all assignable Midi controller messages.
- Supports all program numbers numbers & bank change messages.
- Programmable channel pressure & velocity.
- Pitch bend wheel.
- 6 user programmable "Program & Bank Change" memory.
- 805x208x87mm.
- Transpose up to full range of 109 keys.
- Standard MIDI out 5 pin Din.

DIGITIZING TABLET
NOW ONLY
£99.99

AS AN ALTERNATIVE TO
THE STYLUS INPUT THE
GENIUS TABLET ALSO
HAS OPTIONAL FOUR
BUTTON PUCK.

GENIUS PUCK
£29.99

- ▲ With the Amiga Genitizer Graphic Tablet you can streamline the operation of most graphic or CAD programs.
- ▲ The Genitizer Graphic Tablet utilises latest technology to offer up to 1000 dpi resolution at the tip of a stylus.
- ▲ Complete 9"x6" digitizing area plus super accurate stylus combine to enable fast, accurate and easy control.
- ▲ Works by "mouse emulation" so the Genitizer will work with most packages where mouse input is the usual method-Deluxe Paint, Photon Paint, CAD Packages, etc.
- ▲ Supplied with template for Deluxe Paint..
- ▲ This is the input method used on professional systems.

- ▲ Fast input of drawing by "tracing" is made easy - plus "absolute reference" means you can move around the screen many times faster than by a mouse.
- ▲ The Genitizer fits in the serial port of your Amiga 500/500+/600/1200/1500/2000 and "co-exists" with mouse.
- ▲ Unlike a mouse, the tablet gives absolute co-ordinates so that tracking and menu selections are possible from the tablet face.

power supply

GOLIATH HAS THE POWER

Goliath is a direct power supply replacement with a difference! If you have an Amiga with a large harddrive, extra memory, accelerator board or indeed any powerful add-on then a standard Amiga power supply just cannot cope. The Goliath packs more

- ▲ Fan cooled.
- ▲ Heavy duty case.
- ▲ Switch mode electronic system.
- ▲ Full 200 watt output.
- ▲ On/Off switch.
- ▲ 13 Amp uk approved mains lead.
- ▲ Direct plug-in replacement.
- ▲ Also available for cd 32.

AMAZING 200 WATTS OUTPUT!

THE ANSWER TO ALL YOUR DISK BACKUP PROBLEMS!

SYNCR0 EXPRESS is a sophisticated hardware and software package that works by directly controlling your second drive as a slave device ignoring the Amiga's own disk drive controller. This way SYNCR0 EXPRESS delivers power to backup programs, when other backup systems fail.

- ▲ The most powerful disk backup system ever conceived.
- ▲ Very simple to use requires no user interface.
- ▲ Powerful "SYNCR0 MODE" actually synchronises your drives to achieve even greater backup power!
- ▲ Menu driven selection of start/end track. Up to 85 tracks.
- ▲ Totally "transparent" hardware switches out automatically when not in use.

It is illegal to make copies, even for your own use, of copyright material, without the given permission of the copyright owner, or the licensee thereof.

Animations can be previewed on the control screen, or on any other display which is present in the standard Amiga display list.

Of course, loading and saving is all very well, but there is that little matter of playback to take into consideration. Previous versions of *MainActor* seemed to take an instant dislike to my PicassoII card once I had installed the third party drivers, which are part of the "CyberGraphics" package.

Happily, all is now well and animations will play back very smoothly indeed. The key is to load the animation in whatever format it comes in (ANIM, FLI and so on) and then re-save in a form optimised for your particular graphics card.

When next loaded, it will then replay at a blistering rate and, if your card has a video encoder available, you can play back the animation directly from memory or hard disk to video tape with excellent results. It's still impressive what an Amiga can do when you give it the right tools.

For that finishing touch, *MainActor* will now support sound with almost as much flexibility as graphics. You can pre-program a sound sample for each frame or play back almost any music MOD file – there are a large number of libraries for replaying standard, compressed and extra high-quality modules. If you are recording to video, adding a synchronised soundtrack in this way can really add a touch of class.

It would be nice to see some way of keeping sound effects and sound

modules separate, so that a tune could be playing as well as frame accurate spot effects, but that would really require a new MOD standard which is beyond the scope of an animation editor. In fact, *MainActor* is getting close to a multimedia program.

It is still considerably different from a program such as SCALA in many important ways – there is no scripting language, interactivity or external control options – and this is a good thing. It's better to concentrate on one particular field than try to master them all. *MainActor* is an animation processor, not an authoring tool.

MainActor really pushes the Amiga's ability to replay animations about as far as it can go with the current level of technology. About the nearest competition to its editing facilities is FRED, the Frame Editor which comes with Art Department Professional. For playback, the Clarissa system is great for Amiga graphics mode animations, although it lacks support for alien file formats and graphics cards.

Sadly, development of AdPro has ceased which means that despite the lack of FRED's neat graphical display, *MainActor Broadcast* is now an essential piece of

Sound effects (including sound modules) can be added for each frame in the animation.

EFFECTS

For the first time, *MainActor* now supports special "effects modules" that will process the individual frames which make up animations. The result of the effects can be previewed before the animation is saved to disk.

The supplied effects include:

3D Stars – Create an animated 3D starfield effect.

Background – Place another animation project in the background, with a user-definable "invisible" colour.

FadeToColour – Cause the animation to fade to a user-defined colour over a number of frames. Useful for fading out to black, or producing "flash" effects.

Rotate – Spin the animation around the X, Y, or Z axis.

Sequencer – Combine several animations into one. These can all be saved out as one complete file.

Text – Add text in a font and colour of your choosing. The text overlays the animation and can be scrolled, or rolled up and down the screen. Perfect for titles.

FadeToImage – Mix one animation project into another; a great effect to mix several animations.

Amiga animation software. Ideally, you would have all three systems at your disposal, but if you could only choose one, *MainActor Broadcast* could well be the wisest choice.

The display might seem a little sparse, but that is only because all the features are positioned behind buttons and in menus. This is a really powerful program, with many options for further expansion. There is no doubt that it is expensive for what is an animation utility, but it is also an excellent program that many Amiga users have been waiting for.

MAINACTOR BROADCAST

DISTRIBUTOR

CD-ROM Round-up

AMINET SET 2

PDSOFT ■ 01702 466933 ■ £24.95 PLUS P&P

If you are too lazy, can't be bothered, or are in any way suspicious of the regular Aminet releases, then this disk may hold some appeal. It is a four-disk pack and includes everything that has been added to the Aminet site since Set 1 was finished. Everything up until November '95 anyway. From a rough inspection, that means well over 1,000 archived files in all the familiar categories.

The disks work well and are designed to hold complete categories, so disk b has pix, gfx and misc, disk d has mods, comm and mus. You get the idea. This can be a little more confusing, because the searchable indexes on the disks do not contain the information on the other disk. So, for example, you could be looking for an application called plopsound, which converts mods into fractal pictures. Is it in the mus drawer (disk d) or the gfx drawer (disk b) or even the util drawer (disk a). Only using the index on the correct disk will tell you for sure.

That minor niggle aside, the set is well stuffed with useful utilities, programs, FAQs, pictures, demos and music. If you have not yet started collecting Aminet disks, this is probably the best one to start with.

If you only buy one Aminet disc, this is it.

90%

Just one of the useful programs you'll find on Aminet and this set has the best.

C=64 SENSATIONS

PDSOFT ■ 01702 466933 ■ £19.95

There's big money in nostalgia, and if matchbox cars and Beano annuals can fetch big money at Sotherby's, why not relive the heady days of the C64. Ah, the thrill of 64K RAM, tediously slow floppy drives, tape megaloaders, low resolution screens and overheating power supplies. As far as it goes, the C64 was the most successful 8-bit home computer and I'm sure a great number of older Amiga owners probably owned one, or aspired to own one, in the past.

This disc contains two emulators which will turn your Amiga into an almost fully functional Commodore 64: the acclaimed A64 and the bizarrely named Frodo.

The emulators are accompanied by a number of utilities for extracting data from C64 tapes, attaching 1541 floppy drives to your Amiga, playing 64 music files and converting tape images between various different formats. You will also find a complete collection of around 7,500 original demos.

Unfortunately, probably due to copyright restrictions, there are no games, or even Basic programs included on the disc, so you will have to find original tapes and equipment, or tape images of software elsewhere. Since both the emulators are available from other sources and do not take up much room, it is debatable whether this disc is any use if all you want to do is play your old 64 games. It is valid as an archive and nostalgic memento of a bygone era, though.

These title screens are the closest you'll get to real games, since because of copyright restrictions, only PD demos have been included.

No games, only demos, but a nice piece of nostalgia.

76%

GAMERS DELIGHT II

Games, games and, yes, more games. A simple interface allows you to select from the best of PD and shareware games, and there are hundreds of them. Most of these games have appeared on Aminet at some stage, but it is good to have them all together on one volume. Major negative points have to be awarded for not making the disc CD³² compatible, though.

Many games have appeared on the Aminet at some stage, but it is nice to have everything on one disc.

Doesn't work on the CD³², but there's a lot here.

GET STARTED

Multimedia At Its Best!

- ✓ Simple and Easy-to-use
- ✓ Educating and Informative
- ✓ Entertaining and Exciting
- ✓ Powerful and Amazing!

Main Contents List:

The History of the Amiga

Who invented it? The old Commodore, its bosses, ideas, mistakes etc. The Escom rival and much more.

Amiga Environment

What is your Amiga? Why is it so special? What is the scene? Who are Amiga Technologies and what do they do?

The Amiga Hardware

Inside, outside, ports, chips all explained

Workbench and DOS

What is it? Using it. Data and file management, Workbench environment tips, the CLI, advanced WB and CLI tricks

Programming

AMOS, Blitz, assembly, C, Amiga E and AREXX examined

Become an Artist Overnight

Raytracing, 3D, animation, bitmap drawing analysed

Become an Amiga Music Maestro

Octamed explained, MIDI discussed, musicians interviewed

Getting Your Words into Print

Word processing, Desk Top Publishing, Printers, Clipart etc

Surfing the Super Information Highway

Intro to the Internet, Surfing the Internet, WWW design, Amiga Internet Providers, Amiga Internet software

General Arena

Emulation, Operating Systems, Virus Problems, Amiga in Business, Multimedia etc etc etc

The Amiga Future

Where is the Amiga going? Amiga Technologies' plans, Amiga visions, possible industry comments

And Finally

Credits, thanks and anything we have forgotten!

Welcome to the Amiga's first truly AGA multimedia, point-and-click compact disc. Have you been craving for PC-style multimedia CD's on your Amiga? This rivals and beats many PC interfaces. A CD to help any Amiga owner, from beginner through to intermediate level, understand their computer. John Kennedy drives you around the Internet, MIDIcraft entertain you to the delights of Amiga MIDI, Stuart Morton teaches you how to get into programming, Larry Hickmott on DTP and more. This CD is like getting 12 issues of your favourite magazine - info online all the time! Even experts will be entertained by this CD - there is something for everyone. Not to be missed!

Above are first screen-grabs from an early version of the Get Started CD interface. The main page, 256 colour windows, the floating dictionary and an animation example.

Also!

- Full version of Octamed 5.04
- 'Test Drive', exclusive version of Wordworth 3
- Disk Magic and Photogenics demos, info and tutorials
- Essential PD to Get Started!
- Special upgrade prices to new Amiga products and software
- Full colour booklet guide

Workbench

Life is full of mysteries and the Amiga is certainly no exception. Graeme Sandiford knows all about the quiet strength and willfulness of his favourite machine. So, send your queries to Workbench, *Amiga Format*, 30 Monmouth Street, Bath, Avon BA1 2BW.

SPANISH STEPS

I am one of the last Amiga (500 1.3) users in Spain and I'm having a lot of questions, but in Spain nobody can answer. I'm hoping you can and that's why I'm writing.

I'm trying to buy a hard disk for my computer and I'm not sure if all the disks I have can install to it. Is it true that the games disks on the Workbench which say "NOT A DOS DISK" can't be installed to the hard disk?

Secondly, can I install DOS games disks without installing instructions inside it?

What's the best program to manage the hard disk?

Some DOS games have no startup on the DIR, I think it's impossible to play with it without having to reset the computer and put the game disk into the disk drive (because on my Workbench screen, when I open the window of the disk, this is empty). Is it right?

Jordi Marin
Visa Barcelona- Spain

Disks which pop up on the Workbench claiming to be NDOS and which return error messages when you try to access them use their own file system, rather than the standard Amiga one. By default they cannot be copied to a normal hard drive partition.

However, there are utility programs around which can fake a small non-AmigaDOS partition and you might be able to use one of these. However, many games simply don't get on with the Operating System and will therefore never know what a hard drive is, or how to use one.

Um, sorry but I'm not quite sure what exactly you mean here. If a game is on a standard AmigaDOS format disk you should be able to copy it to your hard drive. However, you will need to include a few ASSIGN statements so that the games knows to look to the hard disk, rather than the floppy for loading data.

A suite such as Quarterback Tools or AmiBack Tools are very useful to have around in case things go

Continued overleaf ➔

IF YOU HAVE A QUERY...

Graeme Sandiford

At *Amiga Format* we aim to answer as many questions as possible. Unlike some magazines, we don't just concentrate on our areas of expertise - we take on all your problems (as long as an Amiga is involved). Here are a few tips on sending in questions:

- Be concise.
- Detail the actual problem as best as you can.
- Describe the events that caused the problem.
- Give full details of your equipment.
- Make sure your question is relevant and wouldn't be more easily solved by contacting the dealer from whom you bought the goods.

Bear these points in mind and fill in, photocopy, or copy the form below as best you can.

Send your letters to Workbench, *Amiga Format*, 30 Monmouth Street, Bath, Avon BA1 2BW

ASSIGN ASSIGNATIONS

Installation problems with *All New World of Lemmings* can be easily solved.

I have just bought a hard drive, but I have a few problems.

All *New World of Lemmings* will not install on my Games partition. In the ReadMe.txt (on the program disk, showing all icons) it tells me to put the command...

Assign L3: [Drive name] /L3

...in my user-startup (and yes I did put my HD partition 'GAMES' where it says [Drive name]) and I also created the L3 directory in my games partition. I reset the machine, ran the Install program and it says "please insert volume L3 in any drive" - but this should not happen if I have assigned L3 to a directory!

Now my hard drive has a checksum error on disk block 85038 and I've had to format the thing, three days after buying it!

Peter Ford
Middlesex

Putting GAMES in the assign isn't good enough, you need to put the drive name as well. For example, if

your GAMES directory is on the partition called HD0: then you would need to use the line:

Assign L3: HD0:GAMES/L3

If GAMES happens to be the name of the entire partition, you would need to use a line like this:

Assign L3: GAMES:L3

It is vitally important to remember to include the root device and put a colon (:) after it.

Checksum error aren't that uncommon, especially if the drive is being used for games playing sessions. As you have discovered, when they occur you will need to re-format the drive (copying all the important files off first).

It's a good idea to have two partitions on the hard drive to help out in backup situations like these, and remember also the QUICK and FFS options should be used when formatting to save yourself a lot of time. However, a disk utility suite such as QuarterBack Tools or AmiBack Tools will fix the checksum error without re-formatting the disk.

⚡ wrong with your hard drive. The AmigaDOS disks which appear empty aren't true AmigaDOS disks, but use their own filing system.

You are right in thinking that you can only play them by booting from them; in which case a special program in the disk's boot block is loaded and this starts the new filesystem.

In short, buying a hard drive won't make playing all games easier.

CD-ROM CONUNDRUM

I'm looking for a CD-ROM drive and have a few questions that I hope you can answer:

1. The price of dual-speed drives is pretty reasonable, but are these drives any good? I've seen your review for the 6-speed CD-ROM.

2. Are most CD-ROM drives user-friendly? Are they easy to use from Workbench and easy to actually plug in? Where do they plug in? PCMCIA?

3. What exactly is the storage size of a CD? I heard it's about the size of 500 floppies? Is this true?

4. Most importantly, due to the immense amounts of data that can be shoved on to CDs, will I need more RAM than my standard 2Mb?

If so, is it possible to get trapdoor RAM even though I've got my hard drive inside there somewhere?

I've tried to be concise, I hope you can help me. By the way, the Amiga will never die!

Andrew Thelwell
Stoke-on-Trent

1. Dual speed drives are the standard and frankly, in my opinion at least, you would need a good reason for anything faster. There are no games on the Amiga that I know of which require an extra quick drive and when reading files the difference between a read lasting two seconds and one lasting four seconds is pretty insignificant.

2. CD-ROM drives appear on your Workbench like any other disk icon. You can do anything you can with a hard drive or floppy, except write to them. They work much faster than floppies and a bit slower than hard drives. Fitting them depends on which interface you go for. A SCSI interface such as a Squirrel is a good choice - it connects to the PCMCIA slot and a lead is connected to the CD-ROM drive.

3. You could squeeze more than 500 Amiga double-density disks on if you wanted, since there is about 600Mb free on a CD-ROM.

4. You won't need any extra memory, although getting some is a good idea as it will speed up your Amiga a good bit (there is still room in the trapdoor for memory).

MUSIC MAYHEM

Could you please inform how to use (that is, Load and Save) Music-X (Amiga) from Alesis MMT8 Sequences. I have tried setting Music-X Master Clock to Midi-Clocks, but keep getting several error reports.

Alan Jones

I'm not sure exactly what you are trying to do here, but I guess you are trying to load a sequence from an external MIDI sequencer into Music-X. No matter what the exact plan is, the first thing to do is get the clocks working together. Each system (the MMT8 and the Amiga) can have an internal clock or an external clock. You will need to set up the equipment so that one is operating internally and the other externally: it doesn't matter which, but one setting will work better than the other. This will allow only one clock to drive both systems.

Try setting Music-X to accept the PLAY/STOP commands as well, since this will make your life easier. Then match the tempo on both systems. Now you can play a sequence on Music-X and the MMT8 should play along in time.

If you want the sequencer to act as a MIDI source for Music-X (so that the songs stored on the MMT8 will appear in Music-X ready for editing and saving), your best bet is to play the song through several times and each time record only one channel.

How do you get the MIDI clocks and the Music-X clocks working together?

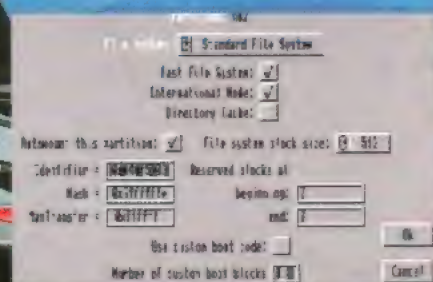

MONKEY BUSINESS

Please can you save my (questionable) sanity.

1. I recently bought Monkey Island 1. My problem is that when I launch the program from hard drive or from floppy (using Workbench) all the graphics are odd-looking.

2. My second problem is about connecting my CD32 to my Amiga. I (foolishly) bought a CD32 S-PORT Silicon Graphics card (SGS 1000).

Go to Parition Drive, then Advanced Options, then Change... and finally change the MaxTransfer setting by deleting an "F".

consists of a cable from the AUX port of my CD32 to the serial port of my Amiga, with some totally useless software (Twin Express & PARNET), neither work. So my question is, have I bought a duffer, or am I using the software wrong?

By the way, did you know that the Blockbuster video store now deals in Amiga software as well as console software?

James Thompson
Rotherham

1. The first problem is easy fixed by altering the MAXTRANSFER setting for your hard drive. Use HDInstall, Advanced settings and knock the large hex number which appears down by deleting an F. That should fix the problem.

2. You will need to run Parnet or TwinExpress on both the CD32 and the Amiga. If you don't have suitable software on CD-ROM, many of the PD compilation disks have this hidden away somewhere. It can still be a right pain to get it all working though, so you will have to persevere.

I didn't know that about Blockbuster video. I'm off there now to see what they have.

of MIDI information. Music-X is not great for recording multiple channels and even if it does work, they will all end up in one track. For better results, Bars and Pipes can record all the channels at once and sort them into different tracks.

BIG DRIVE BOTHER

I'm sorry if I am taking your time with my questions, but here in Portugal there is no one able to answer them for me and I think you are the right person to do it. I own an A600 with 2Mb of RAM and I would like to ask you for some advice in terms of hardware.

I saw in AF76 one advertisement from First Computer Centre where they announce 1.05Gb hard drives for A600 (Page 88).

1. Is it possible that my computer with just 2Mb of RAM can support such a huge hard drive? Would I lose speed with it?

2. If it is not possible to add this HD, what do I need? More RAM (if so, how can I get it) or a smaller HD (which size)?

3. In AF73 (page 21) I saw what I think is a RAM card of 20Mb from Mitsubishi Electric for PCMCIA that fits my computer. Am I right? How can I get one of those?

4. And last, I have a Commodore MPS 1270A Ink Jet Printer connected to the parallel port. I use the Po (Portuguese) Keymap configuration and the EpsonX CBM-MPS-1250 printer driver. When I use Ed from WB, and I use it a lot, I am never able to print some characters that are specific for Portuguese, like accents.

They are displayed on the screen, but do not appear in the printer or, sometimes, they are replaced by other 'funny' symbols. What is the problem? Can't Ed support specific letters when sending them to the printer driver? Is there a printer driver that fits my printer better?

I would be very grateful if you gave me a quick answer because I have to buy the hard drive before my parents change their minds and I don't want to lose this opportunity of increasing my computer capacities.

Joao Ramalho
Portugal

1,2. You don't need any extra RAM. Although the hard drive will require memory for disk buffers, and so on, you should still have more than enough left over. You won't lose speed, although if you did happen to have Fast RAM fitted, things would go faster. Currently Fast RAM is only possible with a soon-to-be-available-honest A600 accelerator.

3. The card in question was not strictly Amiga compatible and the art person responsible has been suitably tortured by being forced to watch the omnibus edition of HollyOaks. The same family of cards includes RAM sizes of several hundred K to several Mb and these are available from many dealers, not only Amiga ones: PCMCIA is a good cross platform standard.

4. Ed is not the world's best tool for text editing. You would be much better using a dedicated wordprocessor, like Final Writer. A program like this has its own fonts and the page is printed in graphics mode, line by line, rather than depend on the printer's character set and the printer driver's international experience.

BOOT DELAY

I have recently bought a brand new Amiga 1200 and I was hoping that you could answer a few queries that I have.

1. When I reboot my Amiga, it takes about 30 seconds until the screen prompting you to insert a disk appears, whereas on my brother's Commodore Amiga it takes roughly five seconds. Is there something wrong with my computer?

2. When I opened my Amiga 1200 package, I noticed a Commodore power supply supplied with it - surely this can't be right, can it?

3. Some time ago I heard about a game that was being released on the PC; it was called Xcom: Terror From The Deep. Are there any plans to release this on the Amiga?

4. Is there any way on Earth that I can get Falcon (the game) to work on my A1200? I have tried everything I can think of to get it to work (even praying!), yet it won't co-operate.

Thanks a lot for answering these questions, but there is just one more thing to ask you. My brother has written a diary program in C and he was wondering if you would like a copy of it to put on the Coverdisk? It has an encryption mode, log ins, passwords and lots of other features. What do you think?

Scott Parker
Norwich

1. Some Amigas, especially those models with IDE interfaces (A600, A1200, A4000) with no hard drive present, can take a few seconds to look for one before booting. Fitting a hard drive makes this delay vanish, as it is caused by the Operating System searching in vain for a drive. Also, some memory expansions seem to cause a delay. As long as the Amiga starts to reboot within a minute or so, this should not cause concern.

2. It's likely that the new Amiga owners either had access to the stock of power supplies, or simply didn't have time to re-make the plastic moulds for the power supply casing.

3. No, I'm afraid there are no plans to release XCom on the Amiga. You could, of course, write to MicroProse and put pressure on them to change their minds.

4. Falcon is just too old. Buy Gunship 2000 or TFX.

Continued overleaf →

"You don't want to play boring, old Falcon, you want to play brilliant, new TFX."

BUM DEAL

For help, I have recently swapped from A600 to AMIGA 1200. It is second hand and I'm beginning to think I got a bum deal. When I load my Workbench, it doesn't look like the illustration in my user's guide and even less like one shown in your mag.

There seems to be a few drawers missing, making it hard work for me to find my way around (I can't even set the clock). According to my Amiga we are still in 1984. More importantly, my Workbench seems to be on the original packaging. It has two compartments in it. I have five disks. I have a clock, or is it a clever brain-baser?

How many disks should I have for the 1.0 version?

1. What is my mystery missing disk?

2. Should I format my Workbench disks and buy a new Workbench?

3. Games are OK, but what about making music and all the other things that I can do with my Amiga. What books offer this information that someone as helpless as I could understand?

Robert Abraham
Manchester

Don't worry, you did the right thing. An A1200 is much more versatile than a second-hand A600. I can't see how your Workbench looks any different, then in yours. It's through the previous owner made changes and saved them to the original disk. It's a common mistake to do. The first thing you should do is make copies of the originals, and then throw them away.

1. A1200s only came with one disk.

2. The sixth disk, which is the Workbench disk, has a hard disk version that contains similar programs to the ones on the other disks. No need to cry yourself sick.

3. Yes! Do not format the Workbench disk. It's a good idea to write a book on Amiga technologies, one that would be useful to you.

4. Buying Amiga books is a personal choice. I bought a few, but I'm not sure if they were worth the money. I'm sure you'll find a good one if you look hard enough.

Buying a modem could be the best decision you've ever made.

← If you have a program you think AF might be interested in, the best thing to do is to send it in (marking the envelope clearly "Coverdisk submission") for the attention of Graeme Sandiford.

THE NET AND THE A500

After about 2-3 years of constant nagging, complaining and moaning I have finally convinced my parents to get me a modem for my A500 with 512K of chip RAM. I will be getting a Sportster 288 and I have also got a chance of an upgrade. I would like to visit Web pages with graphics and I'm not sure what kind of RAM upgrade I would need.

I could have either an 020 accelerator with 4Mb Fast RAM or an 020 accelerator with 2Mb chip RAM and a 2Mb Fat Angus. What would you suggest?

I have installed MUI (don't you need it for certain packages?). Could you please suggest what packages (PD/shareware if possible) I could use for a TCP/IP package, a Web browser, an IRC program and a mail reader? I would really appreciate any help or advice you could offer, since I am a complete novice to comms and the Internet.

Dave
Sussex

I would honestly advise getting a new Amiga, preferably an A1200. Even a second hand one would be money well spent. For starters, the A500 is not really up to handling the serial rates which a 28.8K modem would produce. You need to mess around with alternative serial drivers and it's a messy business.

If you are sticking with the A500, a 14.4K modem is more sensible and a lot cheaper. You will need more chip RAM if you want to see Web images, although they will be rather sad in the limited non-AGA colour modes. Go for the Agnus upgrade.

Yes, you need Magic User Interface to run AMosaic, the Amiga Web browser. You will also need AmiTCP (version 4 is a demo shareware, but useable or the commercial version of the AmiTCP package from BlitterSoft) and Grapevine for IRC (Internet Relay Chat). There are several mail programs - one of the best is MetaMail. All are available from the Aminet internet sites; as soon as you get on-line you can use FTP to download them.

As you are a total newbie, I would strongly recommend you start your on-line life by dialling into a few Bulletin Boards rather than jumping into the Internet immediately.

SAY, CAN I CD?

Please help! I am computer illiterate, but have a 12-year old son with an A600 which has no additions apart from a printer. He keeps asking if it's possible to use a CD-ROM and, as I've no idea what he's talking about, I'm referring the

TOO MUCH?

Please help me answer a question about North C programming language. I have North C installed to my hard drive and I copied a utility called MUCHMORE to my C directory to read text files.

Even though it's been copied, it still will not let me open any of my files when I click on them! This appears as: "Error while opening C:\MUCHMORE 205". What do I type at the CLI, or do I change the default toll to ED since I don't know what to do. Please help me.

Dwayne Bhatia
Fife

Your problem has nothing to do with North C as such. Error 205 means that the file CIMUCHMORE cannot be found. This is what appears in the text file's icons next to Default tool.

Try changing this to be C:\MUCHMORE and checking that the MUCHMORE program really

is in the C: directory on the hard disk. You can check to see exactly what is going on with a program such as SnoopDos, available from any Public Domain library. Run SnoopDos and then try to read your textfiles: SnoopDos will display what is happening in its own window.

Use the information in the Workbench menu to get the information send in the icon. Notice how the default tool is the application which is called when the icon is double-clicked.

question to you. Can a CD-ROM be used with the A600 and, if so, what equipment is needed to make it work?

Most importantly, what does it cost?
Hope you can help us.

Ann Firth
Liverpool

A CD-ROM drive is a disk drive which reads CD-ROM disks. These are like floppy disks, except they are slightly faster, hold about 500-600 times as much information and cannot be written to. They are popular on the Amiga for distributing PD software, and some games.

The good news is that it is possible to connect one to an A600. You will need a Squirrel SCSI Interface and a suitable CD-ROM drive, which means (the bad news) it will cost between £100 and £300 depending on the speed on the drive. HiSoft and Power Computing, who advertise in this very magazine, will be able to help you further.

However, it has to be said that although the A600 will be able to make use of the Public Domain software available (utilities, pictures, sound effects and so on), please understand that your son will not be able to use the CD-ROM drive for CD games. The A600 is not quite up to that job; an A1200 is required. This is because most CD games are written for the CD32 console, which is effectively an A1200 with a CD-ROM drive, with no keyboard and a black box.

STANDARD OUTPUT

I recently purchased a CITIZEN ABC 24 dot matrix printer which I use frequently. I am currently thinking about using it for drawing up CVs, but I do not have a program that will fully utilise the printer's internal fonts and font sizes.

The program should work like Wordworth, or the Mac program I used whilst in college, MacWrite, where you can type a sentence or paragraph, select it with the mouse and convert the colour or font or size in the menu, but using the printer's own internal fonts. The system I use is an A600 with 2Mb.

I hope there is a program available, and if you know of one, could you tell me what it is, where to get it and how much it costs.

Jason Culligan
Ireland

When selecting fonts in Wordworth there is

the option to use only the fonts which are directly produced by your printer, rather than send the finished page to the printer as a graphic image. Protext is the original printer-friendly word processor, and it may suit your needs as well. However, when using only printer fonts, you may be disappointed at the lack of flexibility this offers.

If you want to keep your text crisp and sharp but you are afraid your printer might let you down, consider producing your document as a PostScript file and bringing it to a bureau where it can be output on a good laser printer.

NULL DEVICE

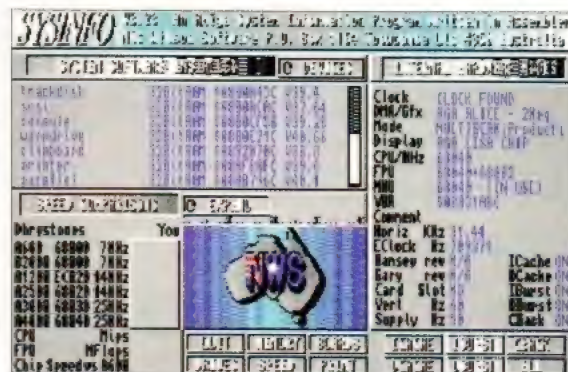

I hope you can help me with this quite major problem, at the moment I cannot print from my Amiga, every time I try and print from any application, even Workbench and DOpus, I get the message "Cannot open printer.device".

In the devs drawer in Workbench, there is a file called printer.dev. I have tried replacing this with the one from my original system disks; I have also replaced the printer cable, but to no avail.

James Lewendon
Reading

Your Amiga is more than capable of printing; it sounds as though there is nothing more complicated than a little naming problem. The printer device must be called printer.device, if the file can't be found in the devs: directory then any application will fail.

Also make sure you have a parallel.device in the devs: drawer. You can use a PD utility like Sysinfo to check that the printer.device is present. Run it before and after attempting to print something and use the DEVICES option to see if it exists.

Use Sysinfo to keep track of your devices... including the mysterious vanishing Printer.device.

ProGRAB... *Rapid Frame* Grabbing on your Amiga

Now compatible
with both VHS
and S-VHS!

The revolutionary S-VHS ProGrab™ 24RT Plus with Teletext is not only the best way to get crisp colour video images into your Amiga, from either live broadcasts or taped recordings, it also costs less than any of its rivals. This real time PAL/SECAM/NTSC* 24-Bit colour frame grabber/digitiser has slashed the price of image grabbing on the Amiga and, at the same time, has received rave reviews for its ease of use and excellent quality results. ProGrab™ has earned honours from just about every Amiga magazine and Video magazines too!

And... with ProGrab™ you needn't be an expert in Amiga Video Technology, a simple 3 stage operation ensures the right results - Real Time, after time.

STAGE 1...

Select any video source with S-VHS or composite output. This could be your camcorder, TV with SCART output, satellite receiver, domestic VCR/player or standard TV signal passing through your VCR/player... the choice is yours.

Grab images with
your camcorder
including S-VHS

or, Take a signal from a
TV with SCART output

or, Use the signal from
your satellite receiver..

or, Grab TV or video
pictures from your
VCR's video output
including S-VHS.

STAGE 2...

With ProGrab's software, select an image you wish to capture using the on screen preview window and Grab (because the hardware grabs frames in real time, there's no need for a freeze frame facility on the source device!). Once grabbed, simply download and view the full image on your Amiga screen. ProGrab also includes a Teletext viewing and capturing facility from either TV or satellite sources.

STAGE 3...

Use the 'grabbed' image with your favourite word processor, DTP or graphics package.

ProGrab really does make
it that simple!

ProGrab™...

Supports all recent Amigas and is also fully AGA Chipset compatible. You can render images in any Workbench screen mode resolution including HAM8 mode (Amiga RAM permitting).

ProGrab™...

Saves and Loads Images in IFF/ILBM, IFF/ILBM24, JPEG, BMP, PCX, and TARGA file formats. ProGrab saves animations as Anim5 files and animations with sound (requires PCMCIA interface and separate sound sampler) as Anim5 + 8SVX files.

A range of image processing effects, palette computing routines (AGA only) and dithering methods are also new to ProGrab Version 2.5.x Photogenics fully supports ProGrab with a custom 'Loader' to enable grabs directly from within the program - saving YOU time!

ProGrab™...

Software has built in mono and colour animation facilities. The number of frames is dependant upon your Amiga's RAM.

ProGrab™...

Release 2.5.x software now includes...

• **SUPPORT FOR VIRTUAL MEMORY**
Allows the highest resolutions - Even with low memory Amigas (All Hard Drive Systems without the need for an MMU, requiring just 1 Mb. Hard Drive Space).

• **ADDITIONAL TELETEXT FACILITIES**
With either Terrestrial or Satellite TV signals.

• **LARGER PREVIEW WINDOW**
Double Resolution and 4 times the area available with previous ProGrab software.

• **INTERNATIONAL SUPPORT**
Now works with composite PAL, SECAM and NTSC Straight from the box!

*Standard ProGrab hardware is PAL/SECAM/NTSC compatible. Interface mode options are available with PAL & SECAM only. NTSC Only modes are available to special order when they support the interface mode fully. Please ask us for full details.

For just **£129.95...**

ProGrab is supplied with everything you'll need +

- ProGrab™ 24RT Plus Digitiser
- Mains Power Supply Unit
- User Manual
- Latest ProGrab Version 2.5.x Software
- Parallel Port Connecting Cable
- Input sockets for Composite and SVHS.

PCMCIA Interface for A1200 and A600 - Only £34.95

ProGrab's optional PCMCIA Interface includes the latest version software and extends performance for serious/professional users - offering the following benefits:

- Faster Downloading Times (up to FIVE times quicker)
- Improved animation speeds of up to 11fps (mono) and 3.5fps (colour)
- Sound sampling and animation capabilities (separate sound sampler required)
- Saving of animations direct to your Amiga's hard drive
- Freeing of your Amiga Parallel Port for use by a printer or other parallel peripheral device

ProGrab™ supports any Amiga with Kickstart 2.04 or later & a minimum of 1.5Mb. free RAM.

+ A video source cable will be required to match your own equipment set up - Ask for details

ProGRAB™
S-VHS 24RT Plus

Get Under Us commented: "If you're looking for a high resolution 24 bit digitiser then, at this price, ProGrab 24RT represents great value for money."

camcorder
USER

ProGrab™ - Voted as **The Best Video Hardware** product for the Amiga. This is especially pleasing because the award comes from the Amiga Shopper magazine's readers.

Our Satisfied Customers!

ProGrab™ - Amiga Shopper **95% STAR Buy** and remarks like: "Sharp, crisp and faithful to the original colours, we were mighty impressed" and "Highly Recommended: Whether you are a Videographer or a Graphic Artist, look to the ProGrab 24RT Plus - it's a winner!"

ProGrab™ - Amiga Format **93% Gold Rating** and comments like: "ProGrab 24RT Plus is quite simply the digitiser to get", "Incredible value for money - no other digitiser offers so much for so little" and "Offered far more features than any other digitiser near the same price!"

Our Amiga user ProGrab™ is: "Just fine job for beginners and semi-professionals on a tight budget" and "very hard to beat. For the money, nothing can touch it!"

Real 3D Tutorial

If you want to render your own version of *Babylon 5*, you'll need to master animation. There is so much to this fantastically broad topic that we'll have to look at it over several months. Rest assured that when all the hard work is over, you'll have all the tools you need to create your own miniature feature films.

Making an animation requires all the skills of a director, lighting engineer and stage artist in one, not to mention the ability to create realistic objects. The finished film is made frame-by-frame and each frame is a separate

image which has been individually rendered. When the frames are played back in sequence, the objects spring to life and move around the screen. Cars will whiz past, planets rotate and the sun can rise and set. You can also change the shape of objects, so they "morph" into different objects over time.

Your finished feature can be replayed using the tools which came with *Real 3D*, or stored in standard Anim5 format. You can then load the animation into any paint program, (*Deluxe Paint* or *Personal Paint*) and add the finishing touches.

You can even combine digitised images of

real actors and combine them with the 3D rendered objects to create alien abduction scenes or add amazing special affects to your home videos. If you have a hard drive and genlock, you could replay extra long animations from disk, combine them with live action and record your epic back to tape...

Before we get carried away, we'll need to master the simple things, such as creating more than one image at a time and simple movement.

Next month we'll start dealing with more complicated movements and see how to create spaceships which move in realistic orbits.

PROJECT 1

The Spinning Cube

1 Let's start with a simple animation. Begin with a brand new project and create a cube in the middle of the screen. Rename it so you can keep track of it easily. We are going to make a short animation of the cube spinning around.

2 Go to the Animation item in the Project menu and select size. This will set the number of frames in the animation. Remember, each frame will need to be rendered individually, so keep to small numbers to start with - try ten.

3 Notice how some extra bits and pieces have appeared in the title bar. The arrows allow you to step backwards and forwards through different frames (we'll come to the "X" later). When you do, you'll see the Frame number change. Note that the frames are numbered 0 to 9.

Static images can be a little dull. This month John Kennedy really starts to get things moving. Hold on tight!

9 Now go back to the Wireframe screen. You will see the cube from a different angle, although it may not be perfectly square on. We'll see how to enter the position numbers accurately next.

Use the arrow keys to move back to Frame 0. Into the box named Pos, copy the numbers from the screen below. Now press the REC button. The frame number will increase, and the new positions will be stamped into place.

10

Now we can think about rendering the images. Go to the solid screen (press q). The important settings are highlighted in yellow; namely, the frame number set to point to RAM disk and the images given a name. Check also that you are in Fast mode and that Single is switched off. Now click on render.

11

After a few moments, the rendering will be stopped. Go to the RAM disk on Workbench and you'll see ten little icons. Each is for the images that you have rendered. If you click on them, they should be displayed in turn. However, let's make a true animation file from them.

12

The program we need came on the distribution disks and is called *DeltaConvert*. This program takes a selection of stills and creates an Animation. There are three different types of animation file: Fast, Small or Anim5. Use Anim5 if you want to use the animation with other programs (*Deluxe Paint*, *Viewtech* and so on).

13

You need to feed in the name of the still frames (remember the path to RAM in our case) and the first and last index numbers (which are 0 and 9). Then feed in the name of the finished animation (with path) and wait. When all is finished, you can load the animation into *Deluxe Paint* and watch it. If you selected the Fast or Small options, you can use the *DeltaPlay* program included.

14

ANIMATION TIPS

- Stick to small numbers of frames to start with. Remember, each frame needs to be rendered individually, so if you render an animation with 100 frames you need to render 100 images.
- Experiment with the Fast and Small delta animation formats. Fast produces larger files, but they play back faster. Use Small if you haven't a lot of memory spare.
- The Anim5 standard is good: but Anim7 is better. The image and animation viewing program *Viewtech* comes with a utility to convert Anim5 files into Anim7 format. Anim7 will play back very smoothly indeed, even from hard disk. *Personal Paint* also supports Anim7.
- You can create your animation in any mode you choose: not only Fast. If you use the IFF-24, then many more colours are used and using a program like *Deluxe Paint* and its dithering feature, you can create an animation with much more detail.
- If you set up animations to render overnight, check you have enough disk space to store all the images. Never leave the monitor on, only the computer, and make sure there is adequate ventilation. An Amiga sitting on the living room carpet is not adequately ventilated.

Amiga.net

A spotty problem

Darren Irvine takes a look at getting started with the Fidonet mailer Spot.

Having read my recent introduction to Fidonet, you may have been tempted to download a copy of Spot and give it a go (who knows – you may even have been able to use my ultra brief installation guide, wonders will never cease). This month, Amiga.Net takes a closer look at Spot and hopefully clears up any blemishes that might be obscuring your understanding of this useful program.

THE AREA LIST WINDOW

This is the first window that you'll see when you run Spot. Each of the areas that you are connected to are shown in a list on the right hand side of the screen. Beside each Area name are three flags indicating the type of messages held in that area – when each of these flags is unset, it is represented by a dash. The first flag "I" indicates that mail has arrived in this echo from the last Import. In a similar way, the second flag – "E" – denotes that you have sent mail in this echo that has yet to be Exported. The last flag "U" indicates that there is mail in this echo addressed to you to which you have not replied.

Moving right across the screen from these three flags, you will see a number beside each

JARGON

JargonArea – Term covering both Fidonet Netmail and Echomail.
Import – The act of unpacking a bunch of messages downloaded from your Boss node using Trapdoor.
Export – Pack up any messages that you have generated ready to be uploaded by Trapdoor. Note that even if you don't explicitly select "Export", Spot will prompt you to do so when you poll.
Thread – A group of messages all traceable back to a single message.

Area name. This is total number of messages stored in that area. If some of the messages in a particular area have not been read, the number of unread messages will be shown in brackets. Additionally, if any of the unread messages are specifically addressed to you, this number will also be displayed.

THE MESSAGE LIST WINDOW

In the Area List Window, the area that is currently selected is highlighted by a blue bar and if you click on "Message List" you will be given a scrollable list of all the messages contained in this area.

For each message in the area, details are displayed of who the message was from, who it was addressed to and the subject area. Unread messages are marked with an asterisk to the left of the message sender's name.

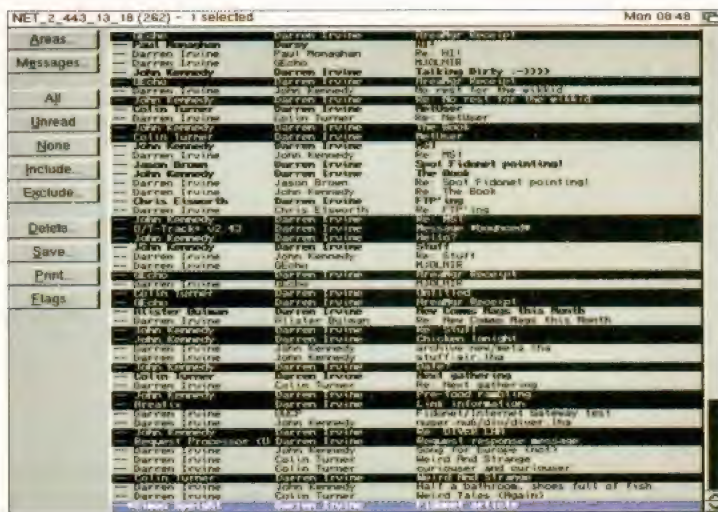

Beside the asterisk, another flag gives more information as to the state of the message. An "E" again indicates that this message has not been Exported by you and a "K" indicates that the message has been marked as "Kept".

You will notice that the lines are displayed in a variety of different colours and formats, and the meaning of these at first incomprehensible variations is as follows:

- Messages sent by you are plain black text on a gray background. This is the simplest case – from now on things get weirder.
 - Messages printed in inverse video (grey on black) are messages sent to you to which you have not replied.
 - Messages to which you have in fact replied to are shown in bold (black on grey).
 - The message that is currently being read is displayed as a variation of the above options – if you haven't replied to the message then it's shown as reverse video text on a white background and if you have replied to it, then it's white text on a grey background. Confused?
- As if the above wasn't enough, you can further cloud the issue by "selecting" a message

Message list...	NET_2_443_13_18	I-U	262	(1 - 1 for you)

Spot's main screen can initially appear a bit confusing, but you'll soon get the hang of it.

If you thought the Area Window was bad, check out the MessageList Window - God help you here if you're colour blind.

or messages, by clicking on them (for instance to select a range of messages to print or delete). In this case, the colour blue is introduced to confuse things still further:

- Messages originated by you are plain black on a blue background.
- Unreplied messages are the inverse of this, with blue text on a black background.
- Replied messages on the other hand are bold black text on a blue background.

None of this makes much sense until you've been using the program for a while, and eventually everything will start to become clear.

THE MESSAGE WINDOW

When you double-click on a particular message in the "Message List" window, or click on the "Messages" button, the actual text of the message itself will be displayed. If the message is longer than one screen of text, you can use the scroll bar on the right hand side of the screen, or the arrow keys to move up and down.

Along the bottom of this window are a row of eight buttons, allowing you to navigate your way through the list of messages in the current area. The first button marked "Write" is fairly self-explanatory, and allows you to send a new

message to the current area. Similarly, the next button "Reply" allows you to reply to the message currently being read.

The next two buttons marked with "<" and ">" symbols allows you to page through the messages in the current area one at a time. If you prefer you can use the left and right cursor keys to perform the same function.

Next along there are two buttons marked "R<" and "R>". These perform a similar function, except that instead of moving through the message list one message at a time, these move to the previous or next message belonging to the same discussion thread as the current message.

A "thread" is a group of messages that are associated with each other. Generally (but by no means always) messages in a thread will share a subject line and be about a similar topic.

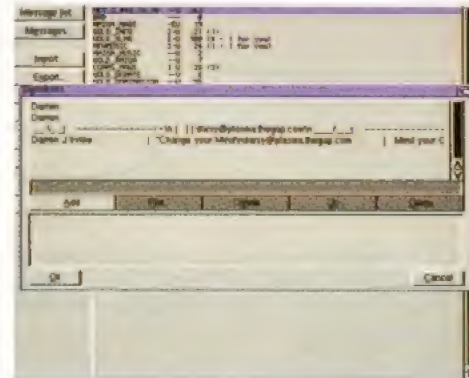

The last two buttons marked "Areas" and "Message List" respectively take you back to the appropriate window.

Of course, there's much more to Spot than the three windows described here - I haven't even touched on the features available from the pull-down menus, but hopefully this should be enough information to get you over the initial

What finally reading a message actually looks like - honestly, I didn't make this one up.

"??" stage that goes with using any new program. There is some good documentation supplied with the Spot archive (cunningly called Spot.doc) in addition to the same material supplied in AmigaGuide format, so you should be able to use these to help you get to grips with some of Spot's more obscure features.

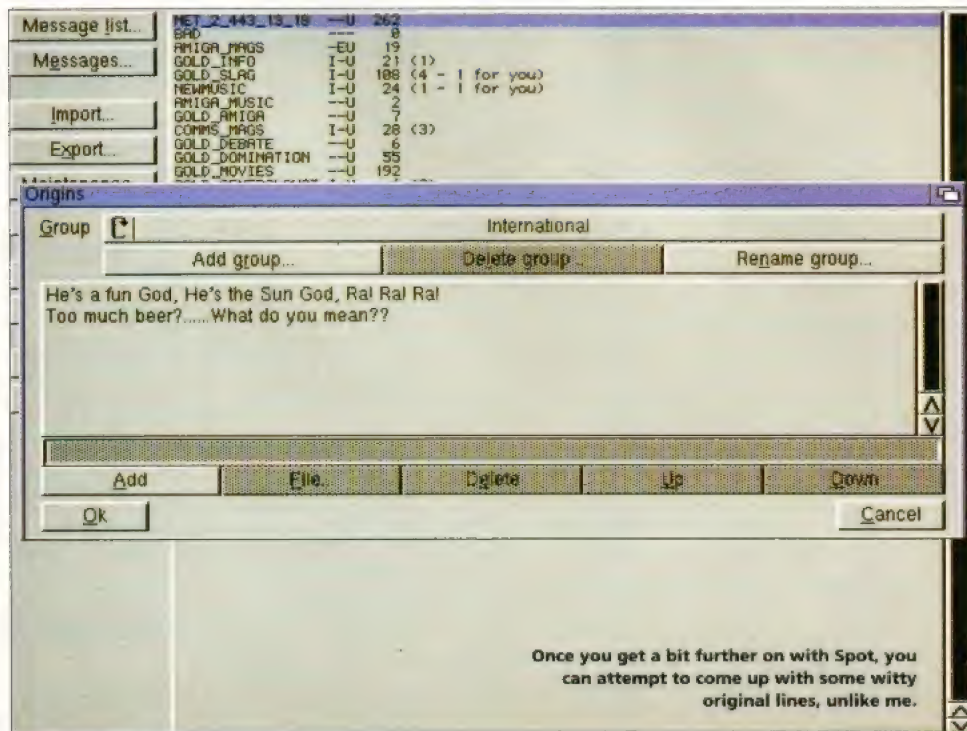

Spot also takes Signature design to new highs, allowing multiple signatures determined by Area.

RUMOUR MILL

It's all been a bit quiet on the Fido front for me recently due to an unfortunate "LHA" related debacle on The Heart of Gold - the system through which I get my Fido feed. So as usual all the dodgy stuff this month comes from the Internet.Comp.sys.amiga.advocacy, filled with the usual PC and Mac loonies who are continually under the impression that sensible Amiga users can be swayed from the true path by mere processor speed, availability of software and cheap peripherals (slap my forehead with a kettle lead, what am I saying).

Worry not, however, because conclusive proof has been found that the Amiga and WB is a superior system to a Windows '95 running Pentium. The redoubtable William Lear (of Amiga Report infamy) has come up with a number of points why the Amiga is the better machine. Chief amongst these is that when moving the mouse pointer around the screen - "I'm talking rapid circular movement" - the mouse pointer left images of itself on the screen, whilst the Amiga mouse pointer suffers no such hideous deformity. Lear concedes that the images left by the Windows mouse pointer are "not permanent". Well William, you've certainly convinced me.

Once you get a bit further on with Spot, you can attempt to come up with some witty original lines, unlike me.

UPGRADE OR DIE

Does anybody remember the days of the A500 (I'm talking about the early ones, without those, then expensive, 0.5 Mb RAM expansions). Everybody was satisfied, simply because the Amiga was the best games platform. Then games like *Dungeon Master* and *Lotus Esprit Turbo Challenge*, among other 1Mb-only games started to appear, pushing the Amiga even further.

It did not take long before every decent Amiga owner purchased extra memory for their loved ones. The result was more spectacular 1Mb-only games to hit the shelves. Everybody from the Amiga user to the producers seemed to earn a lot in this.

Why did things stop back then? Most people still have 2Mb RAM, 68000/020 processors and too many are having a hard time with floppy-only systems. Those systems are just as good as they have always been, but the owners of them should not whine and complain about the fact that Commodore did a lousy job; games developers are sidelining the Amiga; *Dark Forces* will never appear on their computers; and so on. The PC and console market is,

Why are Amiga owners so reluctant to upgrade? Do we perhaps need more games for accelerated Amigas only?

unfortunately, way ahead of the Amiga when it comes to games of certain types.

My message to the people is: "Go on, sell whatever valuables you own and buy some powerful gear for your Amiga (68030/RAM boards or a CD-ROM drive)".

Then ask the market to bring out really hot stuff.

And here goes to the games producers: "Produce some really hot stuff that depends on extra hardware and I promise you that the people will follow the high technology race. I bet that if it was not for hot games, the average PC would still be a normal 386 without a sound card".

The reason I'm writing this is because I own an A1200 030/50MHz 10Mb RAM 425Mb HD and I can't wait for a game not only to benefit from, but actually depend on my powerful processor. (Please Nick, let me read the classic lines: "By the time you read this... Take a look at page... Full review next month... etc.)

By the way, could anybody tell me if there exists a mouse/joystick switch that can handle a CD³² pad, because the Alfa autoswitch does not.

Hauk Langlo
Norway

You are right. For some reason Amiga owners seem very reluctant to upgrade their machines, which surely restricts what programmers can do. Many programmers are finding that in a lot of ways, they have pushed the boundaries of the hardware to the limit.

I can tell you, though, that a special version of *Gloom*, designed for accelerated Amigas, will be hitting the shelves soon, and hopefully we will give you a full review in the next issue. If it is successful, perhaps more software developers will follow this lead.

CUSTOM KIT

Could you encourage Sensible Software to release a proper team editor (for player values, abilities, nationality, etc.) for their excellent game *Sensible World of Soccer*.

To be fair, the custom teams are not exactly flexible and an editor program must already exist in order to have entered all the original (and now out-of-date) data. It could easily be distributed through the Public Domain for little cost and would greatly increase the lifespan of the game.

Also, on *SWOS*, the player values for the national teams can sometimes be displayed by importing them into the custom teams and playing them against a club team. This has crashed my Amiga a few times, but if it works it is useful to see the values of each player.

Finally, whatever happened to the very promising *Battle Isle II*?

"Release a proper team editor for the excellent *SWOS*," demands a reader.

Interesting you should mention it, because we are just at the moment attempting to bring you a quite tremendous saved game editor for SWOS, which will allow you to adjust almost anything in the game as regards to player attributes, worth and so on. Look out for it on an AF Coverdisk near you soon.

Battle Isle II looks like a bit of a non-starter for the Amiga at the moment I'm afraid, but Blue Byte may reconsider in the future.

ALIEN TERROR!

Being an avid fan of strategy games I was unable to resist buying a copy of Microprose's *UFO Enemy Unknown* AGA from my local computer shop at a bargain price (£12.99), but was dismayed to find that there was a bug on disk two. Not a problem – the shop was finding another copy and should be able to get it to me by the end of the week.

In the ensuing time I

Has anybody else had bug problems with *UFO: Enemy Unknown*?

attempted to salvage the information from the duff disk. I was partially successful in recovering all but one file and this would only be used by the UFOPaedia section of the program, so it would be playable

until I get the new disk. All seemed to be going well until the turn-based battle section where a bug occurred.

I phoned the Microprose helpline and explained about the repaired disk possibly being the

cause of the problem, but could they help anyway.

It turned out that this was a known bug caused by a memory allocation problem in the later revision of the A1200 and that only a few instances have occurred so that they are not doing anything about it. The only advice given was to buy some Fast RAM, or take the program back to the shop and get my money back!

Two points arise from this:

1. Surely all the Escom A1200s now back on sale are the new revision and hence will be incompatible with *UFO*?

2. How many other shops will be as understanding as ANTICS in Plymouth, who allowed me to exchange *UFO* for another program without question?

If Microprose wish to sell this excellent program to the new Amiga 1200 owners, they are going to have to update it, but the Helpline operator did not seem to think that this was going to happen.

I.M. Le Couteur Bisson
Plymouth

TO BE OR NOT TO BE TFX

I have a query regarding a letter in your "Workbench" section. A reader enquired as to whether or not an accelerator/FPU will speed up the running of *TFX*. The reader is advised that it most definitely would.

What I would like to know is how can you speed up a game that is not available for sale? Having seen *TFX* advertised for some time in most, if not all Amiga magazines, I have tried in vain to secure a copy of this eagerly-awaited game. My most recent enquiry to Post Haste of Canterbury resulted in me being advised that Ocean had put the game on indefinite hold and is not available anywhere.

I don't know if you can throw any light on this situation, but I find it rather disconcerting to read about software that doesn't exist.

Thank you for your attention.

Geoff Ashden
Kent

It does exist, it is finished and has been for months and months. Basically, the game has been suspended. Initially this was because they were hoping it would be bundled with the relaunched A1200, but that is not the case. Currently, Ocean is considering when to release the game.

When will Ocean release the long-awaited *TFX*?

This is the first we have come across this particular problem, but these things sometimes happen and without knowing too many of the details, it is difficult to know where to apportion the blame. Programmers are given very definite guidelines as to how their software should work, and sometimes these guidelines are ignored.

Something as simple as changing the make of floppy drive used in the A1200 caused a great many games to have problems, because the coders had ignored the advice. Fortunately, there are usually ways around this and I would suggest that you try running the excellent PD program *Half'n'half*, which is also on the AF66B Coverdisk.

Not having a "new" A1200, we can't test this here, but it may work.

PD AMONG THE RAINFORESTS

Well here I am. *Amiga Format* is my favourite magazine and I would like you to print my address in your magazine, because I want to start a PD library with my friends here in Brazil.

There is not one PD house here in Brazil but sadly, on the other hand, there are many piracy houses selling Amiga games, utilities and demos. The people who are interested in this project should send us a copy of his/her game, utility or demo to:

The Factory PD
Rua Sagrado Coracao De Maria,
70 Apto 407 Praia Do Canto
Vitoria- E.S.- Brazil
CEP 29055-770

At the moment we're only working with A600s, A500s and A1200s. We

don't yet have the A4000... We don't swap commercial games so please state *clearly* that we don't like piracy swapping.

People wanting to swap their state-of-art shareware, please write to us first.

I would also like to tell you that your magazine is amazing - I love it, but I think that the PD and Gamebusters sections could be a bit bigger.

Claudio S.M.
Brazil

Well, I really have no idea how many people read this magazine in Brazil, but we do get some mail from that direction, so I hope you get a good response.

I know what you mean about the PD and Gamebusters sections. My problem is that I think all the other sections should be much bigger too! ☺

OVERSEAS BLUES

The launching of this Inter-Continental Ballistic Missile was prompted by a situation which plagues the mail-order industry. An example follows, along with a solution:

Like most of your regular readers, I thoroughly enjoyed the AMOS Professional Coverdisk of last January. So much so, in fact, that I decided to order the User's Guide as well. Then came the bad news. Even though the Guide was advertised in the most recently available issue of *Amiga Format*, you'd run out by the time my order came in. I've since written to Europress directly, so that it may all work out anyway, but another problem still exists.

When issuing International Money Orders, my bank charges \$12.00 to convert US\$ into British Pounds or vice versa. To give you some perspective, \$12.00 is two hours wages for me. Now let's work it through:

An overseas reader sees an ad in the latest issue of your magazine. The cost is £17.99. If this item were on the shelves

of his local shop, it would work out at \$28.97, but it's not, so he has to send overseas for it.

The advertiser wants £4.00 for overseas postage, so the total is now £21.99 or \$35.40.

The bank adds \$12.00 to exchange currencies, so our hero lays out \$47.40 for his £21.99 Int. Money Order. He sends his order off and waits two weeks.

The order is returned unfilled because the item is not available for whatever reason. The bank redeems the returned £21.99 money order for \$35.40, and charges another \$12.00 for the transaction.

Our hero now has \$23.40 in a hand which once held \$47.40.

Losing \$24.00 (four hours wages) to the wind in failed attempt to purchase \$28.97 value item hardly seems just.

Because the overseas customer is literally putting his money at risk, he is deterred from making purchases from suppliers and manufacturers who insist that currencies be changed at the customer's end.

Now for the solution: since the customer is already willing to pay for the exchange of currencies, I suggest that the manufacturers add the exchange fee to the price for overseas orders and then accept U.S. funds which would later be exchanged by the manufacturer.

This way, if an item is not in stock, the customer's payment can be returned without the bank charging anybody anything. Everybody wins, everybody's happy. Except, maybe, the banks.

Please pass on this suggestion to your advertisers.

Robert Koch
U.S.A.

Translating currency for mail order can work out very costly indeed.

arcane

The roleplaying magazine

The Golden Dragon Inn

A fantastic 16-page pull out and keep encounter special.

Eight pages of maps detail this meeting place that's designed to be used in the past, present and future.

Richard Garfield interviewed

The inventor of Magic: The Gathering talks to *arcane* about the game. How he came up with the idea, how it became successful and what he feels about it today.

A revolution in Advanced Dungeons & Dragons

With Skills & Powers you can finally create that Magic User with a long sword in each hand that you always dreamed of. We review it thoroughly

And there's the usual cocktail of news, competitions, and over 50 reviews of new games, books and miniatures.

DICE 3.01

Save over £30 when you buy this complete C programming language from Amiga format. The Recommended Retail Price is £129.99. This full package comes on five

disks, with a 450-page manual. New features include: a revision control system; link libraries for 1.3, 2 and 3; extra link libraries; higher maths functions, such as FPU; support for bitfields, pragmas, etc. If you are into programming, buy it now!

NEW!

Description	DICE 3.01	
Order code	AMS501	AF Price £94.95

The Serial Killers

Nothing can beat the thrill of playing the best Amiga games head-to-head with another human player using a serial link cable. And Amiga Format can bring you that experience with this specially selected pack of three of the best-ever serial link games – all for under £30.

The Serial Killers kit includes WW1 flight sim Knights Of The Sky, driving games Stunt Car Racer and Lotus 2 plus a three-metre serial link cable – everything you need to get hooked up and running.

Description	The Serial Killers	
Order code	AMFSK	AF Price £29.99

Directory Opus 5

Save £10 off the recommended retail price of one of the most useful and time-saving utilities for your Amiga. Directory Opus 5 (AF72, 95%) more or less replaces your Workbench and makes many of those file management tasks much easier. An essential utility for the well-organised Amiga.

Description	Directory Opus 5	
Order code	AFOPU	AF Price £49.95

Get the most out of your Amiga 4th edition

New, for beginners and experts alike, this book will make sure that you literally "get the most" out of your Amiga, whatever you want to do with it. Section A gives you the low-down on how your Amiga works and section B helps you to explore in-depth the myriad of possible uses for your Amiga. The book contains a full glossary to ensure that you are familiar with all the technical terms and it comes with a free disk with carefully selected PD and shareware programs to make your Amiga faster and easier to use.

NEW!

Description	Get the most out of your Amiga	
Order code	FLB522X	AF Price £9.99

Turbotech Clock Cartridge

Your Amiga will always know what day it is with this handy device which sets the correct time and date. The Turbotech Clock Cartridge simply fits into the disk drive port (or on the back of your second drive). Comes complete with software. Save £2 off the recommended retail price.

Description	Turbotech Clock Cartridge	
Order code	AMFCLO	AF Price £17.99

Personal Paint 6.3 and Personal Fonts Maker 2

Take advantage of our very special AF mail order offer and get the truly excellent *Personal Paint*, plus the bitmap font editor, *Personal Fonts Maker*.

Personal Paint is a paint, image processing and animation program, and is an ideal graphics package for programmers and the more serious Amiga user.

Personal Fonts Maker offers support for standard mono and colour fonts, as well as outline fonts and AGA screen-modes. The program uses the same graphics engine as *Personal Paint* and enables you to create bitmapped fonts of your own, which you can colour and use for posters, business stationery, album covers and so on. *PFM* is easy to use, has lots of features and gives results that are really impressive. Now you can get both these great programs for a bargain price of £49.95.

Description	PPaint 6.3 & PFonts Maker 2		
Order code	AFPP	AF Price	£49.95

Music-X 2

This sequencer package, (85%, AF60), is one of the most ground-breaking releases since the original *Music-X* made such a huge impact back in 1989. *Music-X 2* is a full MIDI sequencing package for controlling synthesizers, drum machines and any other MIDI equipment, or you can use it with internal Amiga samples. The leading sequencer for the Amiga.

SAVE £100

Description	Music-X 2	EVEN LOWER PRICE	
Order code	AMFMX2	AF Price	£49.99

Mouse 'n' Mat

At last! A quality replacement mouse at a bargain price, complete with mouse mat. The 260dpi resolution mouse is 100 per cent Amiga- (and Atari ST-) compatible and both buttons are fully micro-switched for maximum reliability and performance. The tastefully-coloured neoprene mouse mat, essential for keeping your mouse free of dust and dirt, is 5mm thick and has a non-slip backing surface.

Description	Mouse 'n' Mat		
Order code	AFMM	AF Price	£12.99

Helm

A true multimedia authoring system, *Helm* earned 91% in AF53. Create image editors, databases, information managers, or educational courseware. *Helm* is an authoring system and a graphics program, combining paint and image processing tools with a scripting language, a hypermedia database manager and user interface objects.

Description	Helm		
Order code	AMF503	AF Price	£99.95

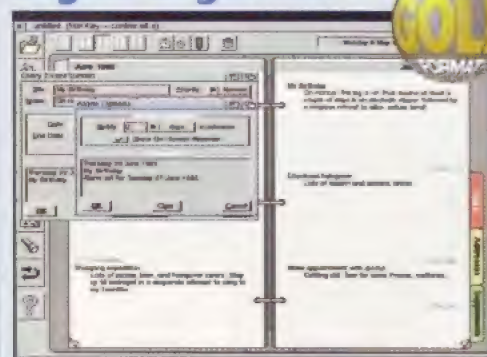

Amiga Format Binder

If your magazines live in large piles on the floor and you can never find the one you want, then keep your *Amiga Format* collection neat and tidy with these practical, yet stylish black-and-silver AF binders. Why not buy two and save on the deal?

Description	Binders		
One binder	AF108	AF Price	£5.99
Two binders	AF109	AF Price	£9.99

Digita Organiser

Another *Amiga Format* Gold, after using *Digita Organiser* you'll wonder how you ever kept your appointments in order. Easy to use, but packed with features, this is truly the King of electronic Filofaxes. Truly indispensable for all scatter-brains.

Description	Digita Organiser v.1		
Order code	AFD0	AF Price	£34.99

Aladdin

This Disney-inspired platform adventure not only looks great, but it also plays brilliantly and earned a glowing *Format* Gold award in AF66. And now *Aladdin* can be yours for £10 off the RRP. AF games editor Stephen Bradley was so enchanted by *Aladdin's* spell that he wrote: "It's just like being a real baggy-trousered sword-wielding little man in a cartoon in Khartoum. Or somewhere".

● A1200 only

Black code	AFAL	AF Price	£16.99

Communicator III

If you have a CD³² and an Amiga with *Communicator*, you can use your CD³² as a CD-ROM – and it brings many new features, including AGA Viewer (view CD pictures and animations in 16.7 million colours), Virtual CD (select which menu the CD boots with) and more. Comes with software and leads to connect to the serial port.

Communicator needs at least 1Mb Chip RAM and Kickstart 2 or 3.

Description	Communicator III		
Order code	AMF505	AF Price	£69.99

Gloom

Top of the A1200 chart for a long time and given a well-deserved *Format Gold*, *Gloom* is an excellent, atmospheric and darned frightening shoot-'em-up. There's levels, maps, mazes and secret rooms aplenty, and to spice things up you get to blast your way through ghouls, devils, general nasties, weapons, blood and gore. This is the Doom-clone the Amiga has been waiting for. You don't want to miss this one. Get it today!

NEW!

Description	Gloom		
Order code	GH/GM	AF Price	£15.99

Fears

"*Fears* should be a compulsory purchase on every gamer's list," said our reviewer in AF76. In a head-to-head fight between *Gloom* and *Fears* they would either kill each other, or would have to settle for an honourable draw. Both these games push the standard A1200 to its limits. *Fears* manages real-time, full-screen texture mapping, optional dithering of the textures, re-sizing of the windows, use of the CD³² controller, and that all-important link option.

NEW!

Description	Fears		
Order code	GH/FRS	AF Price	£15.99

Mini Office

A collection of database, spreadsheet, graphics and word processor programs from Europress that you shouldn't be without. It can be especially useful if you are planning on setting up, or already have a small business.

NEW!

Description	Mini Office		
Order code	CB95	AF Price	£24.99

A500+ and A600 1Mb RAM Upgrades

A600 version shown

If you have less than 2Mb RAM, you are at a serious disadvantage, so why not take the opportunity to upgrade at this low price. These boards for the A500+ and A600 plug into the Amiga's trapdoor connector. Built to the highest standards, they are fully guaranteed for a year.

Description	A600/A500+ 1Mb RAM Upgrades		
A600 code	AF6H1M	AF Price	£29.99
A500+ code	AF5P1M	AF Price	£29.99

Magnum

This A1200 expansion card allows you to upgrade your machine to meet the pressing demands of modern software. The bare board will accept standard 72-pin SIMMs (up to 8Mb), which will double the general speed of your Amiga and can also accept a PLCC FPU unit, to speed up maths operations. The unit has been designed to accept 4Mb of memory and still allows PCMCIA devices to be attached to your machine. Battery-backed clock included.

PLUS: FREE COPY OF OPUS 4.12 WORTH £50

Software Expressions

Established 1990

Introducing some of the best public domain & shareware software. These are high-quality freely distributable disks at a fraction of commercial prices.

All disks are compatible for A500/A500+/A600/A1200, except (N) which indicates not compatible for 1200

EDUCATIONAL

(N.B. This includes some games)

E033	Education 1	Learn German
E180	GCSE Maths	Syllabus taught disk
E185	Astronomy	Calculates positions of planets
E193	Astronomy	A total concept disk
E234	Colour The Alphabet	Educational spelling game
E271	The Highway Code	All you need to know
E023	Electronic Train Set (1meg)	Construct own train set
E079	Treasure Hunt	Great kids game
E088	Pair Crazy	Good puzzle game for kids
E271	Dinosaurs	Quiz on Dinosaurs
E298	States of Europe	Information on this continent. Good
E299	Communicate	Learn how to use sign language
E311	The Internet	A guide to the Internet
E312	Learn French (not 1.3)	French verb tester
E315	Learn & Play 3 (not 1.3)	Education & Games
E331	Jigsaw (2 disks)	Match the pieces in to a jigsaw
E339	Dunks DTP	Desktop publishing for kids
E350	Barney the bear (2 disks)	Learn & meet animals
E385	What's its Name (N)	Educational for kids
E410	Birthday History	Give details of events on your birthday. Good
E411	Word Play	Lots of puzzle games
E413	Moose Code Tutor (not 1.3)	Guide to Moose code
E086	Wraithed 1	Pub quiz style game
E035	Education 3	Weather and climate

BUSINESS SOFTWARE

B089	Journal	Accounts Program
B136	Amibase Prof.	Excellent Database
B140	Text Engine	Excellent Word Processor
B153	File-a-fax	As it sounds
B154	QED	Beginners Word Processor
B175	Text plus VERSION 4	Excellent Word Processor
B134	Amicash	Easy-to-use accounts program
B137	600 Business Letters	All ready to print
B240	Little Office	Word Processor, Database & Spreadsheet
B323	Onform	Invoice maker
B330	Easycalc	Excellent Spreadsheet
B400	Phone Locator	Dialing codes for Britain

CREATIVE + GRAPHICS

C130	Label Designer	Various label printers
C197	Clipart	Stars/Logos/Explosions etc
C198	Clipart	Valentines and Weddings
C119	Clipart	Christmas and New Year
C206	ABC Adventure Creator (N)	Create your own adventure games
C231	Audio Animation Studio	Create Cartoons
C236	Word Power	Solve crosswords & anagrams
C256	Print Studio	Multi purpose printer utility
C258	Garden Designer	Create your own garden, excellent graphics
C263	League Database	Easy-to-use football editor
C389	Turbocat Pro (not 1.3)	Excellent catalogue organiser
C331	Signature Creator	Customise your signature

MISCELLANEOUS UTILITIES

M335	Error Information	Explains computer crashes
M340	Bar Tender (not 1.3)	Drinks and cocktail recipes
M204	Race Rater	Check out form of horses
M213	500 Plus Emulator	Upgrade for A500
M241	Winemaker	Database for wine lovers

M244	Lockpick V2.0	Uncover copy facilities
M259	Easy Spell	Spell checker/helper
M414	Joke Disk	Thousands of jokes
M210	Pools Tools	For football pools
M299	Tee to Green	Excellent golf-scorer
M310	Personality Analysis	Type in answers to assess yourself
M311	Cap the Lot Pro	Updated lottery helper
M332	Virus Checker V6.5	New updated killer
M333	Disk Repair Kit	Salvages damaged disks

DEMOS + RAVE

D075	Girls of Sport	Pretty shots of talented girls
D166	Star Trek Animations	Animations of USS Enterprise

A526	Assassins 247	China Challenge 2, Moose Drive and Antimatter
A527	Assassins 248 (not 1.3)	Air Fight, F-Ball and Matfix
A531	Assassins 249	Trooper, Cunnundrum and Revolver
A243	Tetren	Excellent Tetris clone
A247	Quiz Master	Quiz which includes Editor
A255	Amos Games	5 games including Glassback
A327	Tetris Pro	Tetris game with exceptional variants
A333	Iceman (N)	Recom. Brilliant platform game. 10 out of 10
A338	Project Buzz Bar	Excellent Asteroid type game
A340	Depth Charge	Submarine game
A341	Earth Invader	The best Space Invader game
A433	Harry Haddock	Really good platform adventure
A434	Amiga Boy	Console games on Amiga!
A443	Nimble!	New. Addictive graphical platformer
A502	Cyberman	3D Pacman game. Excellent
A503	Chaneques (2 disks)	Like Lemmings. Good
A504	Rebellion	Asteroids shoot 'em up

STRATEGY + WAR GAMES

Sim013	Bullrun (N)	American civil war game
Sim513	Bridge	The card game
Sim102	Simulation 1 (1 meg)	Recommended. 5 games including Metro
Sim109	Wheel of Fortune (N)	TV Quiz, computerised
Sim124	Napoleonic Warfare	High quality simulation
Sim528	Battleships	Classic game, computerised
Sim143	Card Shop	Well presented card games
Sim217	Act of War	Excellent strategy games
Sim218	Roulette	Casino Classic
Sim220	Sub Attack (N)	Also landmine + bomber
Sim224	Strategic Games	3 excellent games
Sim410	Island	Excellent board game. Build hotels & money
Sim414	Diplomacy (N)	Classic, similar to Risk
Sim415	War (N)	Top quality 8bit strategy
Sim158	Total War (N)	Risk type game
Sim428	The Shepherd	Populous clone
Sim444	Ultimated Quiz	Pub quiz clone
Sim505	Scrabble	Board game, computerised

SPORT

Sp170	Amos Cricket (N)	'Owzat!
Sp208	Grand Prix Simulator (N)	Excellent
Sp256	Slamball	Management game of US football-type sport
Sp263	Soccer Cards	Simplistic league-based game
Sp299	Top of the League	Addictive football management game
Sp307	18th Hole (2 disks)	Excellent golfing game
Sp325	Mister Men Olympics (2 disks)	Excellent game for disks as reviewed
Sp337	Super League Manager 2	Updated soccer management game
Sp372	Road To Hell	Well produced racing game
Sp373	Wrestling (2 disks, WB2.0 upwards)	Good fun graphics
Sp376	Unsensible Soccer	Good football game
Sp429	A Day at the Races	Simple horse racing game
Sp530	Sport Challenge	Hype Olympics, lots of events
Sp532	Friday Night Pool	Pool playing simulation

A1200/A4000 ONLY

U235	Sleepless Nights	Compilation of A1200 utilities
U324	Lottery Winner AGA	Helps you to win!
U334	AGA Killers	Updated virus killer
U399	Graphic WorkBench (2 disks)	Hard drive to install
U508	Videotracker 2	AGA demo creator
U285	Fairlight	29 meg of graphics on one disk
U289	State Of Art	Famous, quality demo
U290	Raving Mad Me	High quality music video
U291	Lethal Exit	Stunning demo
D300	Technotrack II	Move rave music
D305	Tina Small	Slideshow of model
D310	AGA Mansell	Nigel Mansell slides
D315	Minomist Rave	Great dance demo
D509	Phoebe Cates	High resolution slideshow
E214	A Beginners Guide	Learn all about WorkBench 3.0
E300	Speak & Spell	Good for learning youngsters
G321	AGA Klondike (3 disks)	Excellent patience card game
G322	Giger Tetris	Tetris clone
G339	AGA Megaball	Brilliant breakout game
G372	Mad Fighter	2 player Street Fighter game
G414	Motorola Invaders (2 disks)	Brilliant Space Invaders
G420	Pssst AGA	Arcade AGA game
G440	Missile Over Zenon (2 disks)	3D missile command
G441	To the Death	Street Fighter clone
G442	Excellent Card Games III	Restricted AGA version
G445	AGA Donkey Kong	Re-hash of original. Good
G506	Battle Duel	Multiplayer artillery game
G507	Samurai Showdown	Street Fighter clone
G510	Raketz V2.25	Multiplayer thrust shoot 'em up

AMIGA book **FORMAT OFFERS**

Get the most out of your Amiga 4th edition

New, for beginners and experts alike, this book will make sure that you literally "Get the most" out of your Amiga, whatever you want to do with it.

UNDERSTANDING YOUR AMIGA

Section A gives you the low-down on how your Amiga works, including all the hardware and software. There's even a glossary covering all the terms that you're likely to come across.

WHAT YOUR AMIGA CAN DO

Section B helps you to explore in-depth the myriad of possible uses for your Amiga: DTP, Comms, programming, Amiga games, music, graphics and multimedia. Again, there's a full glossary at the end of the section to ensure that you are familiar with all the technical terms.

FREE DISK

Includes carefully selected Public Domain and shareware programs to make your Amiga faster and easier to use.

AMIGA FORMAT SUBSCRIBERS SAVE £3

As an Amiga Format subscriber you'll save £3 when you take advantage of this offer and buy this book for only £14.99.

Order code **FLB522X**

Reader Price **£17.99** Subscriber Price **£14.99**

- How to find your way around the Internet, CIX, CompuServe and other major networks.
- Bulletin Board Systems: what are they, who runs them, what do they do?
- You've got an Amiga and a modem - now make them talk to each other.

Price **£19.95** Order Code **FLB5122**

This new book tells you everything you'll need to know about CD-ROM, how it works, and industry plans to exploit its full potential. **PLUS TWO CD-ROMS!** Included in the book are two CD-ROMs packed with hundreds of megabytes of useful utilities.

Price **£19.95** Order Code **FLB5262**

This guide was written with the full support of Digita International. It contains in-depth explanations of every aspect of the software and includes a bonus disk packed with fonts and clip art.

Price **£14.99** Order Code **FLB0799**

Explore the full potential of AMOS with easy-to-understand descriptions, diagrams and dozens of example AMOS routines. Produce your own Amiga games with a smattering of BASIC knowledge, AMOS - and this book!

Price **£19.95** Order Code **FLB0025**

The Amiga is the world's premier low-cost graphics workstation and is capable of highly professional results. All it takes is the know-how... and all the know-how is right here!

Price **£19.95** Order Code **FLB5084**

Subscription

Bizarrely, because of our obvious reticence to **self** promotion, we often neglect to pay any attention to the **best** value offering in the entire magazine. For the astoundingly low price of **£48.75**, you can receive the **entire** Amiga experience delivered to your door. Amazingly, instead of costing you more, this is a **saving** of 43-and-a-bit pennies per issue. And that's not counting the saving on not having to travel to the shops. Neither does it take into account the **extra** disk full of Public Domain, shareware and readers' contributions which accompanies **every** single issue, or even the **special** newsletter **packed** with inside information and special offers for our **loyal** subscribers.

Go on, you know you **want** to...

AMIGA FORMAT COVERDISKS

It's the ultimate Workbench utilities disk with ten essential programs to let you do anything you want to!

In *Breathless*, it's a fight to the death. You need to know what you're doing. So pay attention and listen up.

Breathless

Probably the best-looking, best-playing game ever on a coverdisk.

When we first saw the demo disk of *Breathless* we knew it was special. So special that we pushed hard to get it on to this month's Coverdisk. We're the first with the review and the first with the demo. I guess you could call that a scoop and an exclusive.

In the process, we've had to sacrifice any A500/600 offering. So severe apologies if you own one of those machines; if you're even on the verge of upgrading to a new A1200, check out *Breathless* in the shop. It'll be worth it.

Anyway, the disk is self-booting. Wait a couple of minutes and the game will load in. Once loaded, you must try and find the exit on the level.

On the path toward the exit, you'll come across silver androids, a nasty gold android, a computer terminal, credits, health kits, shields, a coloured key and energy items.

Kill the androids, jack into the computer and collect the rest. Simple as that. Difficult as that...

In order to use the computer terminal, press the space bar and then use the up and down cursor keys in conjunction with the return key to make a selection. Handy hint No1: Buy the simple shot from the weapons accessories menu, it gives you double the fire power and makes progress easier.

If you've got fast RAM, bump up the detail or the window size. You can actually view *Breathless* in its full screen, 1x1 pixel glory on a standard, unexpanded 1200. Just don't expect it to run well.

Hopefully, it'll encourage you to think about acquiring an accelerator. The full game has been optimised specifically to make use of accelerators.

If you do own an accelerator, try the following trick. Play the demo at a small-ish screen size and 2x2 resolution for a good ten minutes or so. Then switch everything up to the best detail. The difference to the feel of the play is profound.

Good luck and we hope that you enjoy the demo half as much as we enjoyed playing it.

When you reach outdoors, be prepared for trouble.

The most breathtaking playable demo we've ever had on a Format Coverdisk. Join **Steve McGill** as he catches his breath while explaining how to play *Breathless*.

DEAD AGAIN DEAD AGAIN, JIGGETY JIG

The main secret to surviving this level is copious and skillful use of the sidestep. Before you can learn to sidestep, though, it's best to learn the rest of the control keys. Unlike the full game where you can customise the keys to your own desire, the keys are fixed. They are:

Cursor up - Move forwards
Cursor Down - Move Back
Right Cursor - Rotate Right
Left Cursor - Rotate Left
Ctrl Key - Speed up movements
Shift + Right Cursor Key - Move Right
Shift + Left Cursor Key - Move Left
Left/Right Alt - Fire
F1-F8 - Weapons Selection (Not Relevant)

to this demo)

Numeric Keypad 7 - Look up an increment at a time.
Numeric Keypad 4 - Reset the Look
Numeric Keypad 1 - Look down an increment at a time
Numeric Minus Key - Decrease Window Dimensions
Numeric Plus Key - Increase Window Dimensions
'(' Key on numeric pad - 1x1 Pixel Resolution
')' Key on numeric pad - 2x1 Pixel Resolution
'F' Key on numeric pad - 1x2 Pixel Resolution
'=' Key on numeric pad - 2x2 Pixel Resolution
Space Bar - Open doors, jack into computer
TAB - Access Map Screen

ABOVE: The map will help you out by minimising the covering of old ground. Access it using the TAB key.

RIGHT: Unfortunately, the map doesn't scroll. So you'll still have to use your memory. Hard, but fair.

Check out the lava. The Coverdisk version of the game has a big pool's worth.

Walk over the health power-ups and scour the floor to make sure you don't miss any.

BACKING UP YOUR COVERDISK

Copying your Coverdisk is really very simple. Just follow the stages below...

1 Boot up with your Workbench disk and find the Shell icon, in your system drawer. Double-click on this to go into the Shell.

2 Type in the following line (with a zero, not the letter O), taking care to put the spaces in the correct places:

DISKCOPY FROM DFO: TO DFO:

3 When asked for the Source disk, insert your write-protected Coverdisk and press Return. All of the info on this disk will then be copied from the disk into memory.

4 Once your Amiga has read the info, it will ask for the Destination disk. Insert it and press Return. All information on this disk will be destroyed.

5 On an unexpanded machine, the Amiga may ask for the source disk again, because it copies in chunks. Finally, type **endcl** to close down the Shell.

DISK NOT WORKING?

We take every care to test the Coverdisk software, but Future Publishing cannot accept any responsibility for any damage occurring during its use. If your disk is faulty, send it back, including an SAE, for a free replacement to:

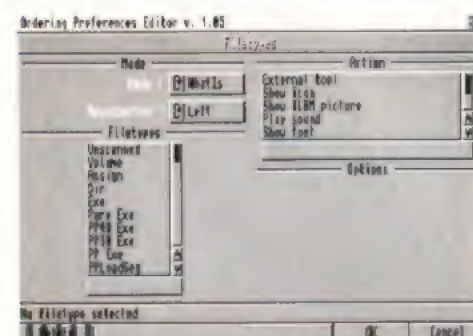

Amiga Format (insert name of disk)
 Disk, DisCopy Labs Ltd, PO Box 21,
 Daventry, NN11 5RT

Ordering is an easy-to-use file manager that will bring order to where there was once only chaos.

This month's disk has been compiled with Workbench 2 and above users in mind, but so that we don't leave out 1.3 users completely, some of the utilities work with those machines. To use the utilities, you need to unpack the disk, which is done automatically by booting the Coverdisk.

If you have Workbench 2 or better, you can install to floppy disks or hard disk directly. Workbench 1.3 users will have one disk installed directly to floppy. You must have some blank, formatted disks ready to unpack on to - WB 1.4 users need one disk and other users need three. The whole process is automatic. Here's a list of the programs on the disk...

One of the best features of **Ordering** is the separate preferences editor that lets you tailor the program.

FAIR SHARE

A number of the programs on this month's Coverdisk are some form of shareware. If you find the program of use, then you must register it. In some cases, this might only require you to drop the author a line.

Remember that supporting the authors encourages them to develop further programs for the Amiga and without these authors our favourite computer might not have survived recent events.

It might sound like a mouthful, but this month's Coverdisk has more to offer than just a big title. After much badgering by readers, we have compiled a disk that includes the very best utilities for your Amiga. **David Taylor introduces the throng.**

SuperDuper is one of the fastest disk copiers around and will soon replace the Workbench copier.

Ordering

Amazingly, it seems that most users, even those with hard drives, still don't have a file manager. These programs allow you to access and manipulate files in a much more accessible and flexible way than through Workbench. **Ordering** is one such program that stands out because it has a separate, easy-to-use preference program, allowing you to configure it to your needs. What are the advantages of using a file manager?

Well, imagine you are browsing through a directory when you come across a picture. You want to see it, which on Workbench would mean loading a viewer. Here, you can just double-click on the file. If you then want to copy it, move it or delete it, you can do it in seconds, whereas it might take a bit of annoying "dragging and dropping" on Workbench. There are full docs, but you should find it very easy to use.

SuperDuper 3.13

Copying disks is not exactly a bundle of laughs using the diskcopy command, nor is it exactly speedy. Here's where **SuperDuper** comes in handy. It's about the fastest disk copier around and includes a fabulously simple interface.

All you have to do is load the program and tell it which disks you want to copy. You can also tell it how much buffering should be done, which is useful for those with lots or little memory. One of the best things is that you can have multiple destinations, so you can copy a disk from one drive, to two, three or more drives at the same time!

DiskSalv 2

There are some rather unfortunate times when you either delete files you didn't mean to, or format a disk you shouldn't have. Well, all might not be as lost as you thought. If you quick-formatted a disk, **DiskSalv** can recover it for you. Delete a file? **DiskSalv** can get it back. Ah, but what about disks with errors on them?

DiskSalv can repair damaged volumes, recover deleted files and bring about world peace. Well...

Again, **DiskSalv** might be able to recover some of the data for you.

Despite its amazing power, **DiskSalv** is very easy to use. The documents in the docs drawer explain it fully and, although the program is intuitive, should be read first. It has just been used to save my own hard drive, which was suffering from read/writes, amongst other errors. But now it's OK. Hoorah!

Virus Checker 7.18

It couldn't happen to me. Where would I get a virus from? Oh, we've heard them all, but believe us, viruses do exist and can be lethal. **Virus Checker** is one of the best ways to stop a virus ever making it on to your system.

You need to install the program (as you may have to do with some of the others on this disk), but once set up correctly on your Amiga, it will sit in the background and scan any inserted disk for viruses.

The only time you will know of its existence will be if it detects a suspicious file or block, when it will alert you and ask whether you want to kill the offending items. Use with care.

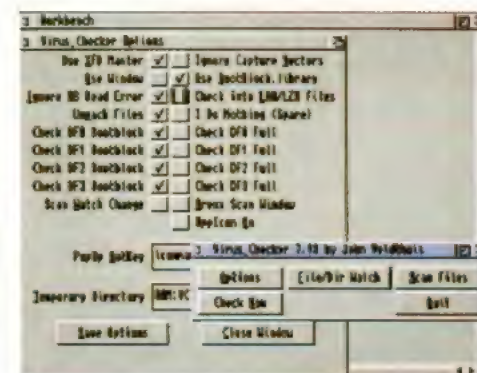

TiffView 1.17

There are now so many different formats used for images that most picture viewers would be pressed to display them. **TiffView** can show more than just the eponymous TIFFs.

The program offers a great deal of flexibility over files and uses datatypes for some files, which is why you'll find the TIFF datatype from the same author on this disk. (The datatype needs installing to your system to be accessed by programs that use datatypes.) You can alter screenmodes and, better still, save out images as different formats.

Still not convinced? Well, there are tons more options too, like the ability to apply a gamma filter to an image, which allows you to brighten up any dark images you have, or darken light ones.

This is an unmissable program.

Virus Checker is the essential program that can protect you from the dreaded viruses.

The Ultimate Workbench Utilities Disk

Arq will transform your requesters into fully animated ones that look, well, lots better.

AssignZ gives you the power over assigns through an easy-to-use requester that you can use to direct the system towards the necessary directories.

Arq

Despite all the refinements made to Workbench over the years, we still seem to be stuck with very dull requesters. Shoved in the top left-hand corner of your screen, they can be quite intimidating. Arq solves this by changing your requesters to animated ones, which can transform your Workbench.

To use it, you need to run it, which is best done from your user-startup sequence, which can be found in S:. Copy the program to your C: directory and then add the "run arq" line to your user-startup.

If that all sounds a little complex, don't worry, it's all explained in the docs. This is the latest version, which allows you to attach samples to requesters, and includes a simple sample player.

Icon Chief

If you end up using the "Show all files" requester from the Workbench window menu, you will find that many files are

TiffView lets you show many types of picture formats and has masses of options.

Ever wanted a nice and simple module player? No fuss. Just select a module and it will play it. Here it is! Once loaded, the interface shows with the buttons to control the module.

shown with the same, useless default icon. When installed, Icon Chief changes this and makes an intelligent guess at filetypes, showing an appropriate icon which lets you know what you're dealing with.

PlayMod

Sound modules abound on the Amiga, but how about a simple module player that allows you to load a module and skip through chunks, stop, pause and quit all through an interface.

PlayMod offers all these features and yet remains small enough to be popped on to many of your disks.

AssignZ

The Amiga often makes use of pseudo volumes, which means that a disk is assigned to a directory. Then, when the Amiga wants a file from a specific disk, instead of requesting

the disk, it simply looks in the relevant directory. This works fine in theory, but runs into problems when you don't have the assigns set up, maybe because you weren't aware they were needed. AssignZ takes away the hassle of entering a Shell and finding the correct assign.

Every time a volume is required, AssignZ pops up and allows you to assign it through an interface. So, if you are asked for information that you know is already on your drive, you can point your Amiga in the right direction easily and painlessly.

A1200 FAQ

To round the selection off, we included a set of Frequently Asked Questions about the A1200.

This document takes each of the most popular questions and answers them in plain English. So if you've got a problem, the answer could well be here.

With TiffView you'll be able to view images at different sizes and quality and can also use the program to convert images between formats. All part and parcel of AF's Ultimate Workbench Utilities Disk.

AMIGA FORMAT COVERDISKS

CAN'T GET YOUR DISK
SOFTWARE WORKING?

CALL

(MON-FRI 2PM-6.30PM)

0191 584 0682

EXTRA!

Your Coverdisk should be working fine, but if it's not, these hints, tips and corrections should sort out the problem quickly and easily.

BARS&PIPES (AF71)

Many readers have had memory problems when trying to run *Bars&Pipes*, or access the *Bars&Pipes* tool AmigaPhone.

To increase the memory, disable Workbench utilities that are running in the background, disable external disk drives and use Workbench Preferences to change screen mode to the lowest resolution and least colours possible. *Bars&Pipes* should now load. Once running, use *B&P's* Preferences menus to switch on all the memory savers.

When you try to load the song Brandenburg Demo, the Amiga asks you to insert Volume Internal Sounds Kit 1. It's an instruments disk not included on the Coverdisk.

Instead, make a copy of your AF71A Coverdisk, rename it Internal Sounds Kit 1 and put it in the drive. Brandenburg will find some of the sounds that it needs in the instruments drawer on this disk, but not all.

Instruments whose sounds can't be loaded, can be fixed by clicking on the AmigaPhone icon at the end of their pipe and choosing a sample from the AF71A instruments drawer.

A set of manuals is now available to

compliment the *Bars & Pipes* Coverdisk. For further information please contact Emerald Creative Technology (0181 715 8866).

SENSIBLE GOLF (AF73)

If you are using a 1Mb machine and have an external disk drive, you will have found that the intro and title load fine, but the game itself fails.

Switch off and disconnect the external drive which is taking up memory that *Sensible Golf* needs. When playing, if it seems that you have control of the game and can do everything except actually strike the ball, your joystick is in the wrong port.

TECHNOSOUND TURBO 2 (AF73)

To use the fun-time effects, as well as some other *Technosound* functions, it is necessary to have an external sampling cartridge connected. If you do have a sampler, but find that it doesn't work properly with the software, try gradually reducing the program's sample rate setting.

TRANSITION (AF74)

If *Transition's* main screen flickers, it doesn't mean that your Coverdisk is faulty. The programmers have chosen to use a high resolution screen for *Transition's* interface. Owners of a suitable multiscan or VGA monitor can configure Preferences so that the flicker is eliminated.

INFONEXUS/DATANEXUS (AF76)

Apologies to readers who are still using Kickstart 1.2 since the programs will not work with your machine. Optonica are running a special offer on the full version of the software exclusively for AF readers. To find out more, contact them on 01455 558282.

REAL 3D (AF77)

If you find that the program will load fine from floppy but fails to load from your hard drive it is possible that the MaxTransferRate of your hard disk is set too high. To remedy this you will have to refer to the documentation that came with your particular hard drive.

45

Snap Maps offer

If you got issue 78's AF Coverdisk with our excellent selection of Snap Maps, you will no doubt be pleased to hear that you can now upgrade to the full version of the collections *Fields & Foliage* and *Building Materials & Fabrics* for either: (Tick appropriate box.)

- ☐ £76 each volume (without AF Coverdisk £99.95)
☐ £140 for both volumes (without AF Coverdisk £188)

In issue 78 Graeme Sandiford was so impressed by this collection of 3D modelling tools that he slapped a Format Gold on it. For £120 you get a whole range of high-quality objects that should have you rendering stunning scenes, from jungles to urban areas, in no time.

IF YOUR DISK IS FAULTY...

Please remember that the technical helpline above is purely for difficulties you have getting the programs to work properly.

If your disk is physically damaged, bent, broken with a loose or missing shutter, it should be returned to Discopy Labs for a replacement at the following address:

**AF DISK NUMBER XX
DISCOPY LABS,
PO BOX 21,
DAVENTRY
NN11 5RT**

This includes any system messages you may get saying: "Read/write error", "Disk invalidated" and "Checksum Error".

In this case, the disk has been damaged and needs to be replaced.

EPIC MARKETING AMIGA SOFTWARE

A powerful set of cataloguing tools. Catalogue your Record, CD, Video and disk collection with ease, and search on any aspect or field.
Suitable for use with Kickstart 2 & 3 only.
Only £5.00

Next month

Making movies...

This month you found out about the power and potential of MPEG video. Next month we look at the power and potential of the

Amiga in a video setup.

Find out what equipment you need to set yourself on the way to becoming a self-styled Tarantino. You will be surprised at how little you need to get started.

From titling to editing, we cover all the vital aspects that any self-respecting videographer should be aware of.

From procedures to concepts, creativity to implementation, we take a look into the future and speculate on the flourishing cable market and its impact on the future of television. Be there.

Breathless

As well as the exclusive Coverdisk, we also offer you the first review of this groundbreaking game.

Review of the Year

The official *AF* historian takes a look back at the delights and catastrophes of the most turbulent year ever for the Amiga.

Serious Reviews

XI Paint, *Impact!*, *AsimCDFS*, *Link-it*, *A1483S* monitor, CD-ROMs, *Mainactor Broadcast*.

A pleasant surprise

We catch up with David Pleasance and discover that the Amiga world hasn't heard the last of him yet.

Real 3D

In our continuing series on this tremendous raytracer, we explain animation techniques.

Workbench

Your technical problems sorted out. Our experts field questions on everything Amiga-related.

Zeewolf 2

The Zeewolf helicopter goes in for an overhaul and returns ready to take on another 32 levels of termination with extreme prejudice.
